Oracle Cloud Infrastructure 2025 AI Foundations Associate Sample Questions (Q39-Q44):

NEW QUESTION # 39

Which is NOT a category of pretrained foundational models available in the OCI Generative AI service?

- A. Translation models
- B. Generation models
- C. Embedding models
- D. Chat models

Answer: A

Explanation:

The OCI Generative AI service offers various categories of pretrained foundational models, including Embedding models, Chat models, and Generation models. These models are designed to perform a wide range of tasks, such as generating text, answering questions, and providing contextual embeddings. However, Translation models, which are typically used for converting text from one language to another, are not a category available in the OCI Generative AI service's current offerings. The focus of the OCI Generative AI service is more aligned with tasks related to text generation, chat interactions, and embedding generation rather than direct language translation.

NEW QUESTION # 40

Which AI Ethics principle leads to the Responsible AI requirement of transparency?

- A. Respect for human autonomy
- B. Prevention of harm
- C. Fairness
- D. Explicability

Answer: D

Explanation:

Explicability is the AI Ethics principle that leads to the Responsible AI requirement of transparency. This principle emphasizes the importance of making AI systems understandable and interpretable to humans. Transparency is a key aspect of explicability, as it ensures that the decision-making processes of AI systems are clear and comprehensible, allowing users to understand how and why a particular decision or output was generated. This is critical for building trust in AI systems and ensuring that they are used responsibly and ethically.

NEW QUESTION # 41

Which statement best describes the relationship between Artificial Intelligence (AI), Machine Learning (ML), and Deep Learning (DL)?

- A. AI is a subset of DL, which is a subset of ML.
- B. AI, ML, and DL are entirely separate fields with no overlap.
- C. DL is a subset of AI, and ML is a subset of DL.
- D. ML is a subset of AI, and DL is a subset of ML.

Answer: D

Explanation:

Artificial Intelligence (AI) is the broadest field encompassing all technologies that enable machines to perform tasks that typically require human intelligence. Within AI, Machine Learning (ML) is a subset focused on the development of algorithms that allow systems to learn from and make predictions or decisions based on data. Deep Learning (DL) is a further subset of ML, characterized by the use of artificial neural networks with many layers (hence "deep").

In this hierarchy:
AI includes all methods to make machines intelligent.
ML refers to the methods within AI that focus on learning from data.
DL is a specialized field within ML that deals with deep neural networks.

NEW QUESTION # 42

You are part of the medical transcription team and need to automate transcription tasks. Which OCI AI service are you most likely to use?

- A. Vision
- B. Document Understanding
- C. Speech
- D. Language

Answer: C

Explanation:

For automating transcription tasks in a medical transcription team, the most appropriate OCI AI service to use would be the "Speech" service. This service is designed to convert spoken language into text, which is essential for transcribing spoken medical reports or consultations into written form. The OCI Speech service provides capabilities such as speech-to-text conversion, which is specifically tailored for handling audio input and producing accurate transcriptions.

NEW QUESTION # 43

How do Large Language Models (LLMs) handle the trade-off between model size, data quality, data size and performance?

- A. They ensure that the model size, training time, and data size are balanced for optimal results.
- B. They focus on increasing the number of tokens while keeping the model size constant.
- C. They disregard model size and prioritize high-quality data only.
- D. They prioritize larger model sizes to achieve better performance.

Answer: A

Explanation:

Large Language Models (LLMs) handle the trade-off between model size, data quality, data size, and performance by balancing these factors to achieve optimal results. Larger models typically provide better performance due to their increased capacity to learn from data; however, this comes with higher computational costs and longer training times. To manage this trade-off effectively, LLMs are designed to balance the size of the model with the quality and quantity of data used during training, and the amount of time dedicated to training. This balanced approach ensures that the models achieve high performance without unnecessary resource expenditure.
