

Unique Juniper JN0-481 Pdf Questions

P.S. Free & New JN0-481 dumps are available on Google Drive shared by PracticeDump: <https://drive.google.com/open?id=1NfiLrdIgAZNF-SdUMhkmIddInoZ5CEoM>

The Data Center, Specialist (JNCIS-DC) (JN0-481) study material of PracticeDump is available in three different and easy-to-access formats. The first one is printable and portable Data Center, Specialist (JNCIS-DC) (JN0-481) PDF format. With the PDF version, you can access the collection of actual Data Center, Specialist (JNCIS-DC) (JN0-481) questions with your smart devices like smartphones, tablets, and laptops. You can even print the study material and save it in your smart devices to study anywhere and pass the Data Center, Specialist (JNCIS-DC) (JN0-481) certification exam.

No doubt the Juniper JN0-481 certification is a valuable credential that offers countless advantages to JN0-481 exam holders. Beginners and experienced professionals can validate their skills and knowledge level with the Data Center, Specialist (JNCIS-DC) JN0-481 Exam and earn solid proof of their proven skills.

>> JN0-481 Valid Exam Question <<

JN0-481 Pass4sure Exam Prep - New JN0-481 Test Question

You can find that there are three versions of the JN0-481 training questions: the PDF, Software and APP online. As you have more time at home, you can use the Software version of JN0-481 exam materials. If you are a person who likes to take notes, you can choose the PDF version. You can print out the PDF version of JN0-481 Practice Engine, carry it with you and read it at any time. If you are used to reading on a mobile phone, you can use our APP version.

Juniper Data Center, Specialist (JNCIS-DC) Sample Questions (Q27-Q32):

NEW QUESTION # 27

Multitenancy for applications is achieved by creating virtual networks (VNs) within which construct?

- A. routing table
- B. connectivity template
- C. security policy
- D. routing zone

Answer: D

Explanation:

A routing zone is an L3 domain, the unit of tenancy in multi-tenant networks. You create routing zones for tenants to isolate their IP traffic from one another, thus enabling tenants to re-use IP subnets. In addition to being in its own VRF, each routing zone can be assigned its own DHCP relay server and external system connections. You can create one or more virtual networks within a routing zone, which means a tenant can stretch its L2 applications across multiple racks within its routing zone.

NEW QUESTION # 28

In the Juniper Apstra UI, you are creating a VNI pool for virtual networks. In this scenario, which VNI range is acceptable?

- A. The valid VNI range is 4096 through 16777214.
- B. Any range is acceptable for the VNI pool.
- C. The valid VNI range is 2 through 4096.
- D. The valid VNI range is 1 through 10000.

Answer: A

Explanation:

In the Juniper Apstra UI, you can create VNI pools for virtual networks that use VXLAN encapsulation in the overlay network. A VNI pool is a resource pool that contains a range of VNIs that can be assigned to the virtual networks. The valid VNI range for a VNI pool is 4096 through 16777214, according to the VXLAN standard. Therefore, the statement B is correct in this scenario. The following three statements are incorrect in this scenario:

Any range is acceptable for the VNI pool. This is not true, because the VNI range has a lower and upper limit defined by the VXLAN standard. The lower limit is 4096, and the upper limit is 16777214. Any VNI outside this range is invalid and cannot be used for VXLAN encapsulation.

The valid VNI range is 2 through 4096. This is not true, because the VNI range does not start from 2, but from 4096. The VNIs from 2 to 4095 are reserved and cannot be used for VXLAN encapsulation. The valid VNI range is 1 through 10000. This is not true, because the VNI range does not include 1, which is also reserved and cannot be used for VXLAN encapsulation. The VNI range also does not end at 10000, but at 16777214, which is the maximum possible value for a 24-bit VNI field.

NEW QUESTION # 29

Which statement about Juniper Apstra role-based access control is correct?

- A. The administrator role can see all permissions.
- B. The viewer role is predefined and can be deleted.
- C. The user role can create roles.
- D. The administrator role is the only predefined role.

Answer: A

Explanation:

Juniper Apstra role-based access control (RBAC) is a feature that allows you to specify access permissions for different users based on their roles. RBAC servers are remote network servers that authenticate and authorize network access based on roles assigned to individual users within an enterprise. Juniper Apstra has four predefined user roles: administrator, device_ztp, user, and viewer. The administrator role is the most powerful role, and it can see all permissions and perform all actions in the Apstra software application. The administrator role can also create, clone, edit, and delete user roles, except for the four predefined user roles, which cannot be modified. Therefore, the statement that the administrator role can see all permissions is correct.

NEW QUESTION # 30

Which two protocols can be used to advertise EVPN routes? (Choose two.)

- A. MP-IBGP
- B. IS-IS
- C. OSPF
- D. MP-EBGP

Answer: A,D

NEW QUESTION # 31

You are working to build an ESI-LAG for a multihomed server. The ESI-LAG is not coming up as multihomed. Referring to the exhibit, what are two solutions to this problem? (Choose two.)

- A. The gateway IP addresses on both devices must be different.
- B. The loopback IP addresses on both devices must be the same.
- C. The LACP system ID on both devices must be the same.
- D. The ESI ID on both devices must be the same.

Answer: C,D

Explanation:

An ESI-LAG is a link aggregation group (LAG) that spans two or more devices and is identified by an Ethernet segment identifier (ESI). An ESI-LAG provides redundancy and load balancing for a multihomed server in an EVPN-VXLAN network. To configure an ESI-LAG, you need to ensure that the following requirements are met:

The LACP system ID on both devices must be the same. This ensures that the LACP protocol can negotiate the LAG parameters and form a single logical interface for the server.

The ESI ID on both devices must be the same. This ensures that the EVPN control plane can advertise the ESI-LAG as a single Ethernet segment and synchronize the MAC and IP addresses of the server across the devices.

The VLAN ID and VNI on both devices must be the same. This ensures that the server can communicate with other hosts in the same virtual network and that the VXLAN encapsulation and decapsulation can work properly.

In the exhibit, the LACP system ID and the ESI ID on both devices are different, which prevents the ESI-LAG from coming up as multihomed. Therefore, the correct answer is B and D. The LACP system ID on both devices must be the same and the ESI ID on both devices must be the same.

NEW QUESTION # 32

.....

The test software used in our products is a perfect match for Windows' JN0-481 learning material, which enables you to enjoy the best learning style on your computer. Our JN0-481 certification guide also use the latest science and technology to meet the new requirements of authoritative research material network learning. Unlike the traditional way of learning, the great benefit of our JN0-481 learning material is that when the user finishes the exercise, he can get feedback in the fastest time. So, users can flexibly adjust their learning plans according to their learning schedule. We hope that our new design of JNCIS-DC test questions will make the user's learning more interesting and colorful.
