Microsoft AZ-400 certification exam is a sought-after credential for professionals in the field of DevOps. AZ-400 exam is designed for individuals who want to showcase their expertise in designing and implementing Microsoft DevOps solutions. Designing and Implementing Microsoft DevOps Solutions certification validates the candidate's knowledge and skills in various areas of DevOps such as continuous integration and delivery, infrastructure as code, monitoring and feedback, and more.

The Microsoft AZ-400 exam is designed for professionals who have a strong understanding of DevOps principles and practices, as well as experience working in a DevOps environment. It is recommended that candidates have at least one year of hands-on experience working with Microsoft Azure and DevOps technologies before attempting the exam. Passing the Microsoft AZ-400 Exam demonstrates to potential employers that the candidate has the skills and knowledge needed to design and implement effective DevOps solutions, making them a valuable asset to any organization looking to improve their software development processes.

What Prerequisites and Experience Are Needed for AZ-400?

It is obligatory that you become an Azure administrator or Azure developer before pursuing this certificate. To assist yourself, you can also start with the Microsoft AZ-900 exam to get all the fundamental knowledge that you might need when becoming an Azure administrator or developer. Also, to take AZ-400 test, you should have expertise in engaging technologies, processes, and people to deliver valuable products and services that fulfill the business objectives and user needs.

And we keep ameliorate our AZ-400 latest material according to requirements of AZ-400 Exam. It is our obligation to offer help for your trust and preference. Besides, you can have an experimental look of demos and get more information of AZ-400 real questions. The customer-service staff will be with you all the time to smooth your acquaintance of our AZ-400 latest material.

Microsoft Designing and Implementing Microsoft DevOps Solutions Sample Questions (Q464-Q469):

NEW QUESTION # 464

You have an Azure subscription that contains the resources shown in the following table.

Project1 produces 9pm packages that are published to Feed1. Feed1 is consumed by multiple projects.

You need to ensure that only tested packages are available for consumption. The solution must minimize development effort.

What should you do?

- A. Create a feed view named @default. After the 9pm packages test successfully, configure a release pipeline that tags the packages as release.
- B. Create a feed view named @release and set @release as the default view. After the 9pm packages test successfully, configure a release pipeline that tags the packages as release.
- **C. Create a feed view named @release and set @release as the default view. After the 9pm packages test successfully, configure a release pipeline that promotes a package to the @release view.**
- D. Create a feed view named @default. After the 9pm packages test successfully, configure a release pipeline that promotes a package to the @default view.

Answer: C

Explanation:

Explanation

By creating a feed view named "release" and setting it as the default view, packages that are published to the feed will not be immediately available for consumption. After the 9pm packages are tested successfully, you can configure a release pipeline that promotes a package to the @release view. This ensures that only tested packages are available for consumption and minimizes development effort as it doesn't require any additional steps to be taken by the consumer of the feed.

Reference:

Azure DevOps Docs: Create a feed and views

<https://docs.microsoft.com/en-us/azure/devops/artifacts/feeds/create-feed?view=azure-devops> Azure DevOps Docs: Promote a package

<https://docs.microsoft.com/en-us/azure/devops/artifacts/feeds/promote-package?view=azure-devops>

NEW QUESTION # 465

You have an Azure subscription that contains the resources shown in the following table.

DepPipeline1 and ADFPipeline1 use a single credential that is stored in Vault1.

You need to configure ADFPipeline1 to retrieve the credential from Vault1.

Which type of activity should you use?

- **A. Copy**
- B. Lookup
- C. Web
- D. Get Metadata

Answer: A

NEW QUESTION # 466

You need to recommend project metrics for dashboards in Azure DevOps.

Which chart widgets should you recommend for each metric? To answer, drag the appropriate chart widgets to the correct metrics. Each chart widget may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

□ Explanation

□ Box 1: Lead time

Lead time measures the total time elapsed from the creation of work items to their completion.

□ Box 2: Cycle time

Cycle time measures the time it takes for your team to complete work items once they begin actively working on them.

□ Box 3: Burndown

Burndown charts focus on remaining work within a specific time period.

NEW QUESTION # 467

You are using the Dependency Tracker extension in a project in Azure DevOps.

You generate a risk graph for the project.

What should you use in the risk graph to identify the number of dependencies and the risk level of the project?

To answer, drag the appropriate elements to the correct data points. Each element may be used once, more than once, or not at all.

You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

□ Explanation

NEW QUESTION # 468

You need to create deployment files for an Azure Kubernetes Service (AKS) cluster. The deployments must meet the provisioning storage requirements shown in the following table.

□ Which resource type should you use for each deployment? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

□ Explanation

□ Deployment 1: Kubernetes.io/azure-file

You can use Azure Files to connect using the Server Message Block (SMB) protocol.

□ Deployment 2: Kubernetes.io/azure-disk

□ Deployment 3: azurekeyvault-flexvolume

azurekeyvault-flexvolume: Key Vault FlexVolume: Seamlessly integrate your key management systems with Kubernetes.

Secrets, keys, and certificates in a key management system become a volume accessible to pods. Once the volume is mounted, its data is available directly in the container filesystem for your application.

NEW QUESTION # 469

.....

These questions will familiarize you with the AZ-400 exam format and the content that will be covered in the actual test. You will not get a passing score if you rely on outdated practice questions. PracticeVCE has assembled a brief yet concise study material that will aid you in acing the Designing and Implementing Microsoft DevOps Solutions (AZ-400) exam on the first attempt. This prep material has been compiled under the expert guidance of 90,000 experienced Microsoft professionals from around the globe.
