The Best NCP-DB-6.10 Test Centres & Leading Provider in Qualification Exams & Complete NCP-DB-6.10 Official Cert Guide

Currently, if you want to make NCP-DB-6.10 exam certification more tied to your status in the IT industry with fierce competition, and make professional competence stronger in the IT industry, you can choose our Braindumpsqa's NCP-DB-6.10 Exam Training materials. With efforts for many years, the passing rate of Braindumpsqa's NCP-DB-6.10 certification exam has reached as high as 100%. Choosing Braindumpsqa means to choose success.

If you are really intended to pass and become Nutanix NCP-DB-6.10 exam certified then enrolled in our preparation program today and avail the intelligently designed actual questions. Braindumpsqa is the best platform, which offers braindumps for NCP-DB-6.10 Certification exam duly prepared by experts. Our NCP-DB-6.10 Exam Material is good to NCP-DB-6.10 pass exam in a week. Now you can become NCP-DB-6.10certified professional with Dumps preparation material. Our NCP-DB-6.10 exam dumps are efficient, which our dedicated team keeps up-to-date.

NCP-DB-6.10 Official Cert Guide, Reliable NCP-DB-6.10 Test Vce

The Braindumpsqa is a revolutionary platform for professionals and students looking to pass the Prepare for your Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 (NCP-DB-6.10) exam and advance their careers. Our mission is to provide a comprehensive, convenient, and cost-effective preparation material for individuals to prepare for the NCP-DB-6.10 Certification Exam.

Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 Sample Questions (Q205-Q210):

NEW QUESTION # 205
An administrator created an NDB managed VLAN called PGSQLVLAN40 After deploying PostgreSQL HA, it was noticed that the databases were able to communicate with everything on VLAN 40 only. What can the administrator do to fix the current issue and going forward?

- A. Delete the data base servers, VLAN name PGSQLVLAN40 and redeploy the same information under a different VLAN name.
- B. Engage the networking team as this is a network related issue.
- C. Use VLAN 1 for the PostgreSQL deployment.
- D. Change the Default Gateway on the PostgreSQL servers and update NDB for VLAN PGSQLVLAN40.

Answer: B

Explanation:
The scenario describes a PostgreSQL HA deployment managed by NDB, where an NDB- managed VLAN (PGSQLVLAN40)

restricts database communication to only within VLAN 40. This indicates a network isolation issue, likely due to VLAN segmentation or routing misconfiguration, preventing communication with external networks or other VLANs. Since NDB manages the VLAN and assigns it to the database VMs, the issue lies beyond NDB's direct control and involves the underlying network infrastructure (e.g., switches, routers, or Prism Element network settings).

NEW QUESTION # 206

An administrator needs to create a Network Profile for NDB HA VMs spread across three Nutanix clusters.
What type of Network Profile is required for NDB API and Repository VMs?

- A. PostgreSQL single instance managed outside NDB
- B. PostgreSQL HA instance managed in NDB
- C. PostgreSQL single instance managed in NDB
- D. PostgreSQL HA instance managed outside NDB

Answer: D

Explanation:
When creating a Network Profile for NDB HA VMs (e.g., NDB API and Repository VMs) spread across three Nutanix clusters, the required type is PostgreSQL HA instance managed outside NDB. NDB HA relies on a PostgreSQL database for its control plane, and in a multi-cluster HA setup, this PostgreSQL instance must be configured for high availability (e.g., using streaming replication) outside NDB's management. The Network Profile must support this external HA instance's networking requirements (e.g., VLANs, IP ranges) to ensure connectivity across clusters.

NEW QUESTION # 207

An administrator has a production PostgreSQL database cloned for development and testing purpose. A new table is added to the source database.
What should the administrator do to publish the update leveraging the point in Time Era capability?
(C) 1. PeHorm a Log Catch-up using source database Time Mechine
2. Refresh the clone database
(C) 1. Perform a Log Catch-up using source database Time Mechine
2. Refresh the source database
(C) 1. update Log Catch-up interval from Tme Machine
2. Refresh the source database
C) 1. Update Log Catch-up interval from Tame Machine
2. Refresh the clone database
How is the size of a database time machine defined?

- A. The size of all snapshots and clones maintained by Era
- B. The size of all snapshots and/or transaction logs maintained by Era
- C. Only the size of all reclaimable snapshots maintained by Era
- D. Only the size of all transaction logs maintained by Era

Answer: B

Explanation:
The Nutanix Era platform provides a feature called Time Machine, which is designed to manage the lifecycle of database copies and clones. When a new table is added to the source database, the administrator should perform a Log Catch-up using the source database's Time Machine.
This action ensures that the Time Machine captures the latest state of the source database, including the newly added table. After performing the Log Catch-up, the administrator should refresh the clone database. The refresh operation updates the clone with the latest state captured by the Time Machine, thereby publishing the new table to the clone.

NEW QUESTION # 208

An administrator is creating a Windows Domain profile in Era. Which optional field can be skipped and provided during the provisioning process?

- A. Organizational Units

- B. SQL Service Startup Account
- C. Domain Account
- D. Domain to join

Answer: B

Explanation:
When an administrator is creating a Windows Domain profile in Era, the SQL Service Startup Account is an optional field that can be skipped and provided during the provisioning process.
This account is used to start the SQL Server service when the server starts up. If this field is not provided during the creation of the Windows Domain profile, it can be provided later during the provisioning process.

NEW QUESTION # 209
The NDB user interface can display which language option?

- A. Korean
- B. German
- C. Japanese
- D. French

Answer: C

Explanation:
The NDB user interface supports multiple languages, including English, Chinese, and Japanese.
You can change the language pReference: in the NDB settings page. The NDB user interface does not support Korean, French, or German languages at this time.

NEW QUESTION # 210
......

It is browser-based; therefore no need to install it, and you can start practicing for the Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 (NCP-DB-6.10) exam by creating the Nutanix NCP-DB-6.10 practice test. You don't need to install any separate software or plugin to use it on your system to practice for your actual Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 (NCP-DB-6.10) exam. Braindumpsqa Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 (NCP-DB-6.10) web-based practice software is supported by all well-known browsers like Chrome, Firefox, Opera, Internet Explorer, etc.
