EMC Dell PowerStore Deploy 2023 Exam Sample Questions (Q119-Q124):

NEW QUESTION # 119
What are two supported combinations of source and destination vVol Storage Containers when replicating Resource Groups on PowerStore? (Choose two.)

- A. Cascade replication to three different sites.
- B. One-to-many replication volumes from one source PowerStore to multiple destination PowerStore appliances.
- C. Multiple replications in different directions.
- D. One-to-one replication arouofrom source storage container to destination storage container.

Answer: C,D

Explanation:
PowerStore supports a straightforward one-to-one relationship where a resource group in a source storage container is replicated to a destination storage container. This is the most common and simplest replication setup.

NEW QUESTION # 120
SIMULATION
An administrator received a request to provision a new test dev volume.
Use the simulator to provision a volume of 50 GB for their application team. Use a category of Other.
The volume performance must not impact the production I/O when the system is heavily loaded.
When you have finished continue to the next question.

Answer:

Explanation:

Access the Storage Management System
Log into your storage management interface

Navigate to Volume Creation
Go to the volume management section and click on "Create Volume" or similar option.

Configure Volume Settings
Name the volume appropriately to indicate it is for test dev. Set the size to 50 GB. Choose the category or type as "Other".

Set Performance Parameters
Look for an option to set performance priority or QoS settings. Configure the volume to have lower priority or a limited I/O capacity to ensure it does not impact production systems when the system is heavily loaded.

Create the Volume
Review the settings to ensure they match the requirements. Click "Create" to provision the volume.

Confirm Volume Creation
Verify that the volume appears in the list of available volumes and with the correct settings.

1. Create the Volume

Navigate to Storage > Volumes.

Click + CREATE.

Enter the volume name (e.g., "TestDevVolume").

Set the volume size to 50 GB.

In the "Category" dropdown, select Other.

Important: Under "Advanced Settings," locate the "Performance" section and set the Workload Type to Low. This will ensure that the volume's performance has minimal impact on production I/O, especially during periods of heavy system load.

Click Add.

Verification

After creating the volume, you can verify its settings on the Volumes page. Check that the size, category, and workload type are correctly configured.

Key Considerations

Workload Type: The "Low" workload type setting is crucial in this scenario. It prioritizes production I/O over the test/dev volume, preventing performance contention.

Performance Monitoring: It's a good practice to monitor the system's performance after provisioning the volume, especially during peak usage, to ensure that the production workloads are not negatively affected.

By following these steps, you'll successfully provision a 50 GB volume for the application team with the appropriate performance settings to avoid impacting production I/O. This meets the requirements of the simulation task.
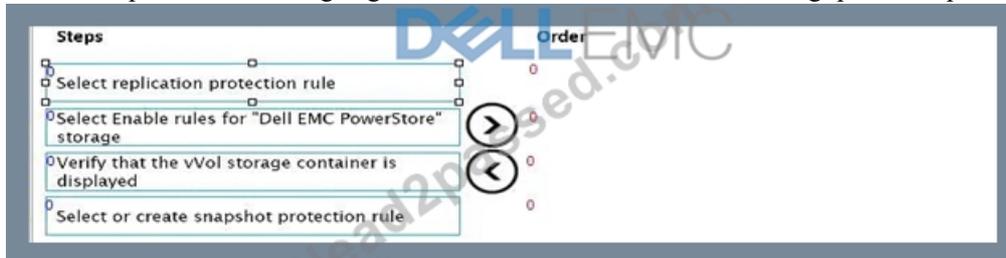

NEW QUESTION # 121

During the initial system configuration of PowerStore, what is the purpose of discovering storage resources?

- A. To assign IP addresses to nodes
- B. To establish Fibre Channel connections
- C. To enable power management
- D. To optimize data deduplication

Answer: A

NEW QUESTION # 122
Place the steps in order for configuring source and destination vCenters when setting up a vVol replication with SRM.

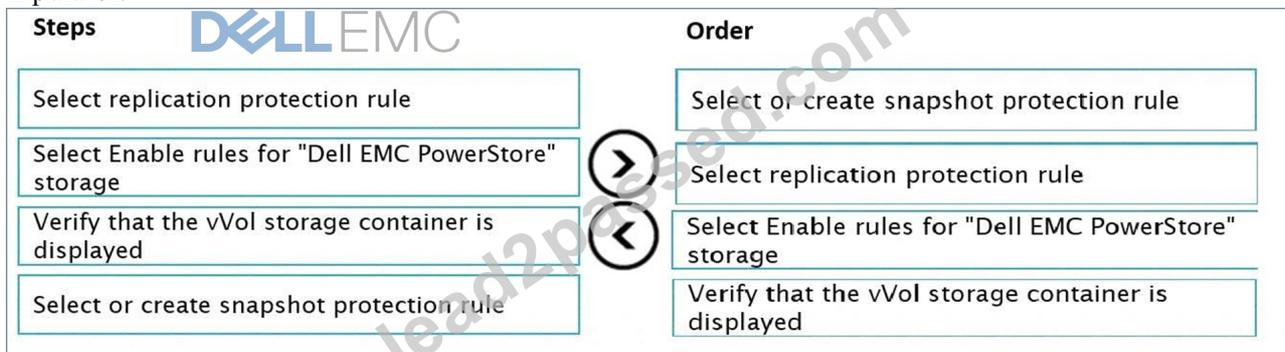

Answer:
