BTW, DOWNLOAD part of ExamsTorrent JN0-481 dumps from Cloud Storage: <https://drive.google.com/open?id=1uw7s0iSt6wEsF0FLuvKJb2m-5w07CAiP>

We are not only offering you the best JN0-481 torrent VCE but also the foremost customer service. If you search for the best high pass-rate study materials, our JN0-481 practice test questions will be your best select. Please rest assured that your money and information will be strictly protected and safe on our website. You have no need to worry anything while purchasing. After purchasing our products you can get 100%-pass-rate JN0-481 Real Questions to help you pass exam immediately at first attempt. Choosing our products will be your clever action for clearing JN0-481 exam.

By keeping customer satisfaction in mind, ExamsTorrent offers you a free demo of the Data Center, Specialist (JNCIS-DC) (JN0-481) exam questions. As a result, it helps you to evaluate the Data Center, Specialist (JNCIS-DC) (JN0-481) exam dumps before making a purchase. ExamsTorrent is steadfast in its commitment to helping you pass the Data Center, Specialist (JNCIS-DC) (JN0-481) exam. A full refund guarantee (terms and conditions apply) offered by ExamsTorrent will save you from fear of money loss.

JN0-481 New Dumps Book, JN0-481 Valid Mock Exam

We believe that getting the newest information about the exam will help all customers pass the JN0-481 exam easily. If you purchase our study materials, you will have the opportunity to get the newest information about the JN0-481 exam. More importantly, the updating system of our company is free for all customers. If you decide to buy and use the JN0-481 Training Materials from our company, it will be very easy for you to pass the exam without doubt. We sincerely hope that you can achieve your dream in the near future by the JN0-481 latest questions of our company.

Juniper JN0-481 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Apstra Design Phase: Covers pre-deployment planning elements such as reference designs, logical devices, device profiles, rack types, interface maps, and templates, including their configuration and troubleshooting.
Topic 2	<ul style="list-style-type: none">• Intent-Based Analytics: Covers Apstra's analytics tools including Graph Explorer, graph queries, and intent-based analytics probes for network monitoring, validation, and troubleshooting.
Topic 3	<ul style="list-style-type: none">• Data Center Multitenancy: Covers multi-tenant network management through routing zones, VRFs, virtual networks, connectivity templates, security policies, VMware integration, and Data Center Interconnect.

Juniper Data Center, Specialist (JNCIS-DC) Sample Questions (Q23-Q28):

NEW QUESTION # 23

You are building an IP fabric and have decided to use Junos devices to create an EBGp underlay. You must ensure that traffic is load balanced throughout your fabric.

You must also ensure that regardless of the path used through the fabric that all traffic is handled consistently and load balanced predictably.

According to Juniper Networks, what are three best practices that you should employ to help you achieve the desired behavior? (Choose three.)

- A. Each leaf device should be a different model including linecards and port density.
- B. All spine devices should be the same model including linecards and port density.
- C. All leaf devices should be the same model including linecards and port density.
- D. Each leaf device must use the same link speed for all uplinks to the spine devices.
- E. Leaf devices should use a variety of link speeds for each uplink to the spine devices.

Answer: B,C,D

NEW QUESTION # 24

What is the purpose of using a routing zone inside Juniper Apstra software?

- A. A routing zone is defined to secure the routing protocols.
- B. A routing zone defined at the Apstra manager level requires firewalls to be deployed.
- C. A routing zone is used to enable the communication between two VNIs within a VRF.
- D. A routing zone is used to enable L4-L7 inspection inside the fabric.

Answer: C

Explanation:

A routing zone is an L3 domain, the unit of tenancy in multi-tenant networks. You create routing zones for tenants to isolate their IP traffic from one another, thus enabling tenants to re-use IP subnets. In addition to being in its own VRF, each routing zone can be assigned its own DHCP relay server and external system connections. You can create one or more virtual networks within a routing zone, which means a tenant can stretch its L2 applications across multiple racks within its routing zone. For virtual networks with Layer 3 SVI, the SVI is associated with a Virtual Routing and Forwarding (VRF) instance for each routing zone isolating the virtual network SVI from other virtual network SVIs in other routing zones.

NEW QUESTION # 25

Juniper Apstra provides five different predefined user roles. Given this information, what is the main difference between the administrator and the user role?

- A. The user role cannot make any changes to other user types.
- B. The user role can only make changes to the view role.
- C. The user role can make changes to any other role.
- D. The user role can only be assigned to specific blueprints.

Answer: A

Explanation:

Apstra role-based access control separates fabric operations from identity and authorization administration. The administrator role includes full permissions, including the ability to manage users and roles (for example, creating users, assigning permissions, and creating/cloning/editing custom roles where allowed). This enables administrators to govern who can access the system and what they are permitted to change across all blueprints and system settings.

The user role, in contrast, is designed for day-to-day fabric work: viewing and editing supported blueprint elements and operational objects within the scope permitted by the role, but not administering other users' access or modifying the role structure itself. In other words, a user can work on the network intent and operations, but cannot elevate privileges, change other users' roles, or otherwise manage user/role administration unless explicitly granted additional permissions through custom roles.

That makes option C the correct statement: the user role cannot make changes to other user types (that is, it lacks the permissions needed to administer identities/roles). Options A, B, and D do not reflect Apstra's RBAC model: roles are not primarily constrained "per blueprint" in that way, and users are not intended to modify other roles-those are administrator-level capabilities.

NEW QUESTION # 26

What are two system-defined user roles that are available in Juniper Apstra? (Choose two.)

- A. root
- B. user
- C. viewer
- D. authorized

Answer: B,C

Explanation:

Juniper Apstra provides four system-defined user roles that are available in the Apstra GUI environment. They are: administrator, device_ztp, viewer, and user1. Based on the web search results, we can infer the following statements:

viewer: This role includes permissions to only view various elements in the Apstra system, such as blueprints, devices, design, resources, external systems, platform, and others. Users with this role cannot create, edit, or delete any element12.

user: This role includes permissions to view and edit various elements in the Apstra system, such as blueprints, devices, design, resources, external systems, platform, and others. Users with this role cannot create or delete any element12.

authorized: This is not a system-defined user role in Juniper Apstra. It is a term used to describe users who have been authenticated by an external system, such as LDAP, Active Directory, TACACS+, or RADIUS3.

root: This is not a system-defined user role in Juniper Apstra. It is a term used to describe the superuser account on a Linux system, which has full access to all commands and files. Creating a user in the Apstra GUI does not provide that user access to the Apstra platform via SSH. To access the Apstra platform via SSH, you must create a local Linux system user4. Reference:

NEW QUESTION # 27

Using the Juniper Apstra multitenancy capabilities, which approach will allow a tenant to interconnect two different routing zones?

- A. Interconnection cannot be enabled.
- B. Use interconnection through the fabric spine nodes.
- C. Interconnection is the default behavior.
- D. Use interconnection through an external gateway.

Answer: D

Explanation:

A routing zone is an L3 domain, the unit of tenancy in multi-tenant networks. You create routing zones for tenants to isolate their IP traffic from one another, thus enabling tenants to re-use IP subnets. In addition to being in its own VRF, each routing zone can be assigned its own DHCP relay server and external system connections. You can create one or more virtual networks within a routing zone, which means a tenant can stretch its L2 applications across multiple racks within its routing zone. For virtual networks with Layer 3 SVI, the SVI is associated with a Virtual Routing and Forwarding (VRF) instance for each routing zone isolating the virtual network SVI from other virtual network SVIs in other routing zones. If you're using multiple routing zones, external system connections must be from leaf switches in the fabric. Routing between routing zones must be accomplished with external systems.

NEW QUESTION # 28

.....

More successful cases of passing the JN0-481 exam can be found and can prove our powerful strength. As a matter of fact, since the establishment, we have won wonderful feedback and ceaseless business, continuously working on developing our JN0-481 test prep. We have been specializing JN0-481 Exam Dumps many years and have a great deal of long-term old clients, and we would like to be a reliable cooperater on your learning path and in your further development. We will be your best friend to help you pass the JN0-481 exam and get certification.
