## Free PDF Quiz 2026 Cisco 300-710: Securing Networks with Cisco Firepower – High Pass-Rate Reliable Exam Syllabus

The study materials from our company can help you get your certification easily, we believe that you have been unable to hold

yourself back to understand our Securing Networks with Cisco Firepower guide torrent, if you use our study materials, it will be very easy for you to save a lot of time. In order to meet the needs of all customers, Our 300-710 study torrent has a long-distance aid function. If you feel confused about our 300-710 test torrent when you use our products, do not hesitate and send a remote assistance invitation to us for help, we are willing to provide remote assistance for you in the shortest time.

# Cisco Securing Networks with Cisco Firepower Sample Questions (Q111-Q116):

## NEW QUESTION # 111

What is the benefit of selecting the trace option for packet capture?

- A. The option limits the number of packets that are captured.
- B. The option indicated whether the destination host responds through a different path.
- C. The option captures details of each packet.
- D. The option indicates whether the packet was dropped or successful.

**Answer: A**

## NEW QUESTION # 112

Which two remediation options are available when Cisco FMC is integrated with Cisco ISE? (Choose two.)

- A. DHCP pool disablement
- B. host shutdown
- C. quarantine
- D. port shutdown
- E. dynamic null route configured

**Answer: C,D**

Explanation:
Reference:

## NEW QUESTION # 113

An organization wants to secure traffic from their branch office to the headquarter building using Cisco Firepower devices, They want to ensure that their Cisco Firepower devices are not wasting resources on inspecting the VPN traffic. What must be done to meet these requirements?

- A. Configure the Cisco Firepower devices to bypass the access control policies for VPN traffic.
- B. Tune the intrusion policies in order to allow the VPN traffic through without inspection
- C. Configure the Cisco Firepower devices to ignore the VPN traffic using prefilter policies
- D. Enable a flexconfig policy to re-classify VPN traffic so that it no longer appears as interesting traffic

**Answer: A**

Explanation:
When you configure the Cisco Firepower devices to bypass the access control policies for VPN traffic, the devices will not inspect the VPN traffic and thus will not waste resources on it. This is the best option to ensure that the VPN traffic is not wasting resources on the Cisco Firepower devices.

## NEW QUESTION # 114

An analyst is reviewing the Cisco FMC reports for the week. They notice that some peer-to-peer applications are being used on the network and they must identify which poses the greatest risk to the environment. Which report gives the analyst this information?

- A. Attacks Risk Report
- B. Network Risk Report
- C. Advanced Malware Risk Report
- D. User Risk Report

**Answer: B**

**NEW QUESTION # 115**

Refer to the exhibit.

A company is deploying a pair of Cisco Secure Firewall Threat defence devices named FTD1 and FTD2.
FTD1 and FTD2 have been configured as an active/standby pair with a failover link but without a stateful link. What must be implemented next to ensure that users on the internal network still communicate with outside devices if FTD1 fails?

- A. Set maximum secured addresses to two on the switch interfaces on FTD1 and FTD2.
- B. Configure the spanning-tree PortFasI feature on SW1 and FTD2
- C. Disable port security on the switch interfaces connected to FTD1 and FTD2.
- D. Connect and configure a stateful link and thon deploy the changes.

**Answer: D**

Explanation:
In a failover configuration with Cisco Secure Firewall Threat Defense (FTD) devices, ensuring that users on the internal network can continue to communicate with outside devices if the primary device (FTD1) fails requires the implementation of a stateful failover link. The stateful failover link allows the secondary device (FTD2) to maintain session information and state data, ensuring seamless failover and minimizing disruptions.
Steps to implement a stateful failover link:
* Physically connect a stateful failover link between FTD1 and FTD2.
* Configure the stateful failover link in the FMC.
* Ensure that both devices are properly synchronized and that stateful failover is enabled.
* Deploy the changes to both FTD devices.
By configuring a stateful link, the secondary FTD can take over active sessions without requiring users to re- establish their connections, thus ensuring continuous communication.
