## Fortinet FCSS - Enterprise Firewall 7.4 Administrator Sample Questions

**(Q55-Q60):**

**NEW QUESTION # 55**

Refer to the exhibit, which shows an enterprise network connected to an internet service provider.

An administrator must configure a loopback as a BGP source to connect to the ISP. Which two commands are required to establish the connection? (Choose two.)

- A. update-source
- B. ibgp-enforce-multihop
- C. ebgp-enforce-multihop
- D. recursive-next-hop

**Answer: A,C**

Explanation:

When configuring a loopback interface as the BGP source for connecting to an ISP, two important settings must be applied:

1. Enable EBGP Multihop (ebgp-enforce-multihop)

BGP normally expects directly connected neighbors, but since the ISP and FortiGate A are using loopback interfaces, packets will not be sent directly between their physical interfaces. The ebgp-enforce-multihop command allows BGP to form an eBGP peering over multiple hops.

2. Set the Update Source (update-source)

Since FortiGate is using a loopback interface as the source, the update-source command ensures that BGP updates originate from the loopback interface rather than a physical interface.

This is essential because BGP peers must match the source IP with the configured neighbor address.

**NEW QUESTION # 56**

An administrator added the following Ipsec VPN to a FortiGate configuration:

```
configvpn ipsec phasel -interface
edit "RemoteSite"
set type dynamic
set interface "port1"
set mode main
```

```

set psksecret ENC LCVkCiK2E2PhVUzZe
next
end
config vpn ipsec phase2-interface
edit "RemoteSite"
set phasel name "RemoteSite"
set proposal 3des-sha256
next
end

```

However, the phase 1 negotiation is failing. The administrator executed the IKF real time debug while attempting the Ipsec connection.

The output is shown in the exhibit.

```

What is causing the IPsec problem in the phase 1?

- A. The pre-shared key is wrong
- B. The incoming IPsec connection is matching the wrong VPN configuration
- C. NAT-T settings do not match
- D. The phrase-1 mode must be changed to aggressive

Answer: A

#### NEW QUESTION # 57

Which of the following statements is true regarding a FortiGate configured as an explicit web proxy?

- A. FortiGate limits the number of simultaneous sessions per explicit web proxy user. This limit CANNOT be modified by the administrator.
- B. FortiGate limits the total number of simultaneous explicit web proxy users.
- C. FortiGate limits the number of workstations that authenticate using the same web proxy user credentials. This limit CANNOT be modified by the administrator.
- D. FortiGate limits the number of simultaneous sessions per explicit web proxy user. The limit CAN be modified by the administrator.

Answer: B

#### NEW QUESTION # 58

Refer to the exhibit, which shows a physical topology and a traffic log.

The administrator is checking on FortiAnalyzer traffic from the device with IP address 10.1.10.1, located behind the FortiGate ISFW device.

The firewall policy in on the ISFW device does not have UTM enabled and the administrator is surprised to see a log with the action Malware, as shown in the exhibit.

What are the two reasons FortiAnalyzer would display this log? (Choose two.)

- A. ISFW is in a Security Fabric environment.
- B. The firewall policy in NGFW-1 has UTM enabled.
- C. ISFW is not connected to FortiAnalyzer and must go through NGFW-1.
- D. Security rating is enabled in ISFW.

**Answer: A,B**

Explanation:

From the exhibit, ISFW is part of a Security Fabric environment with NGFW-1 as the Fabric Root. In this architecture, FortiGate devices share security intelligence, including logs and detected threats.

ISFW is in a Security Fabric environment:

# Security Fabric allows devices like ISFW to receive threat intelligence from NGFW-1, even if UTM is not enabled locally.

# If NGFW-1 detects malware from IP 10.1.10.1 to 89.238.73.97, this information can be propagated to ISFW and FortiAnalyzer.

The firewall policy in NGFW-1 has UTM enabled:

# Even though ISFW does not have UTM enabled, NGFW-1 (which sits between ISFW and the external network) does have UTM enabled and is scanning traffic.

# Since NGFW-1 detects malware in the session, it logs the event, which is then sent to FortiAnalyzer.

### NEW QUESTION # 59

View the exhibit, which contains the output of a real-time debug, and then answer the question below.

```
# diagnose debug application urlfilter -1
# diagnose debug enable

msg="received a request /tmp/.ipsengine_498_0_0.url.socket, addr_len=37:
d=www.fortinet.com:80

```

Which of the following statements is true regarding this output? (Choose two.)

- A. The web request was allowed by FortiGate
- B. This web request was inspected using the root web filter profile.
- C. The requested URL belongs to category ID 52.
- D. FortiGate found the requested URL in its local cache.

**Answer: C,D**
