

JN0-232 Valid Practice Materials & Practice JN0-232 Questions

Have you ever noticed that people who prepare themselves for Juniper JN0-232 certification exam do not need to negotiate their salaries for a higher level, they just get it after they are Juniper JN0-232 Certified? The reason behind this fact is that they are considered the most deserving candidates for that particular job.

The Security, Associate (JNCIA-SEC) (JN0-232) certification exam is a valuable credential that is designed to validate the candidates' skills and knowledge level. The JN0-232 certification exam is one of the high in demand industrial recognized credentials to prove your skills and knowledge level. With the Juniper JN0-232 Certification Exam everyone can upgrade their skills and become competitive and updated in the market.

JN0-232 Sure Answers & JN0-232 Free Torrent & JN0-232 Exam Guide

The JN0-232 test materials are mainly through three learning modes, Pdf, Online and software respectively. Among them, the software model is designed for computer users, can let users through the use of Windows interface to open the JN0-232 test prep of learning. It is convenient for the user to read. The JN0-232 test materials have a biggest advantage that is different from some online learning platform, the JN0-232 quiz torrent can meet the client to log in to learn more, at the same time, and people can use the machine online of JN0-232 test prep on all kinds of electronic devices.

Juniper Security, Associate (JNCIA-SEC) Sample Questions (Q27-Q32):

NEW QUESTION # 27

Which two statements about destination NAT are correct? (Choose two.)

- A. SRX Series Firewalls support interface-based destination NAT.
- B. Destination NAT enables hosts on the Internet to access resources on a private network.
- C. SRX Series Firewalls support pool-based destination NAT.
- D. Destination NAT enables hosts on a private network to access resources on the Internet.

Answer: B,C

Explanation:

* Destination NAT purpose (Option C): Used to allow external hosts on the Internet to access internal/private resources (such as a web server in the DMZ). Destination NAT changes the destination IP of incoming traffic to match the internal server.

* Pool-based NAT (Option D): SRX supports destination NAT pools, allowing multiple public IP addresses or ranges to be translated to internal servers.

* Incorrect options:

* Option A describes source NAT, not destination NAT.

* Option B is incorrect because SRX does not support "interface-based" destination NAT.

Correct Statements: C and D

Reference: Juniper Networks - NAT Types and Configurations (Source, Destination, and Static), Junos OS Security Fundamentals.

NEW QUESTION # 28

Which two statements about the null zone on an SRX Series Firewall are correct? (Choose two.)

- A. Transit interfaces are assigned to the null zone by default.
- B. A logical interface configured in a security zone removes it from the null zone.
- C. Traffic rejected by the security policy is sent to the null zone for logging.
- D. The null zone can be configured to accept traffic to or from the SRX Series Firewall.

Answer: A,B

Explanation:

* Default assignment: All logical interfaces are placed in the null zone by default until explicitly assigned to a user-defined security zone (Option A is correct).

* Removal from null zone: Once an interface is assigned to a security zone, it is removed from the null zone (Option D is correct).

* No traffic acceptance: The null zone is a discard zone; it cannot be configured to accept any traffic (Option C is incorrect).

* Policy behavior: Traffic rejected by a security policy is dropped according to the policy action. It is not forwarded to the null zone for logging (Option B is incorrect).

Correct Statements: A and D

Reference: Juniper Networks - Security Zones and the Null Zone, Junos OS Security Fundamentals.

NEW QUESTION # 29

Content filtering supports which two of the following protocols? (Choose two.)

- A. SMTP
- B. SNMP
- C. TFTP
- D. HTTP

Answer: A,D

Explanation:

Content filtering on SRX devices inspects and controls specific file types transferred across certain application protocols:

* SMTP (Option A): Supported. Content filtering can block specific file attachments in emails.

* HTTP (Option D): Supported. Content filtering can block downloads of specific file types over web traffic.

* SNMP (Option B): Not supported; SNMP is a management protocol, not a content delivery protocol.

* TFTP (Option C): Not supported by content filtering.

Correct Protocols: SMTP and HTTP

Reference: Juniper Networks - Content Security and Filtering Supported Protocols, Junos OS Security Fundamentals.

NEW QUESTION # 30

You are troubleshooting first path traffic not passing through an SRX Series Firewall. You have determined that the traffic is ingress and egressing the correct interfaces using a route lookup.

In this scenario, what is the next step in troubleshooting why the device may be dropping the traffic?

- A. Verify that the correct ALG is being used.
- B. Verify that the interfaces are in the correct security zones.
- C. Verify that source NAT is occurring.
- D. Verify the routing protocol being used.

Answer: B

Explanation:

After confirming correct routing:

* The next step is to verify security zone assignments (Option A). If interfaces are not correctly assigned to zones, traffic will not be

evaluated against proper inter-zone or intra-zone security policies, causing drops.

* Option B: The routing protocol is irrelevant once the correct route lookup is confirmed.

* Option C: NAT is checked later in the flow, not the immediate next step after routing.

* Option D: ALG is only needed for specific applications (FTP, SIP), not general troubleshooting.

Correct Next Step: Verify that interfaces are assigned to the correct security zones.

Reference: Juniper Networks - Packet Flow and Zone-Based Policy Evaluation, Junos OS Security Fundamentals.

NEW QUESTION # 31

You want to use Avira Antivirus.

Which two actions should you perform to satisfy this requirement? (Choose two.)

- A. Enable the Avira engine in operational mode.
- **B. Enable the Avira engine in configuration mode.**
- C. Restart the management daemon (mgd) to load the components.
- **D. Reboot the SRX Series device to load the components.**

Answer: B,D

Explanation:

The SRX Series devices support third-party antivirus scanning engines such as Avira. To use the Avira antivirus engine, administrators must explicitly enable the engine and ensure that the required components are properly loaded.

* Enable in configuration mode:

* The Avira antivirus engine must be enabled under UTM configuration mode. This step ensures the SRX device uses the Avira scanning engine for antivirus inspection.

* Example:

* set security utm feature-profile anti-virus avira-engine enable

* Reboot the SRX device:

* A system reboot is required after enabling the Avira engine to load the Avira antivirus components into memory.

* Without a reboot, the Avira engine will not become active.

* Why not the others?

* Restarting the mgd process (Option A) only reloads the management daemon and does not load antivirus engines.

* Enabling in operational mode (Option B) is not supported; the configuration must be applied in configuration mode.

Therefore, the correct actions to use Avira Antivirus are: Enable the Avira engine in configuration mode (Option D) and reboot the SRX device (Option C).
