最新的 Microsoft Azure AZ-120 免費考試真題 (Q101-Q106):

問題 #101

You plan to deploy an SAP landscape that will have virtual machines deployed to multiple Azure regions.

You need to ensure that the virtual machines can communicate across the regions.

What should you configure?

- A. local network gateways
- **B. virtual network peering in Azure**
- C. Azure Relay
- D. Azure Bastion hosts

答案: B

解題說明:

Depending on the rules and restrictions you want to apply between the different virtual networks hosting VMs of different SAP systems, you should peer those virtual network. Note: Virtual network peering enables you to seamlessly connect two or more Virtual Networks in Azure. The virtual networks appear as one for connectivity purposes. The traffic between virtual machines in peered virtual networks uses the Microsoft backbone infrastructure. Like traffic between virtual machines in the same network, traffic is routed through Microsoft's private network only.

Azure supports the following types of peering:

Virtual network peering: Connect virtual networks within the same Azure region.

Global virtual network peering: Connecting virtual networks across Azure regions.

問題 #102

You plan to migrate an SAP environment to Azure.

You need to recommend a solution to migrate the SAP application servers to Azure. The solution must minimize downtime and changes to the environments.

What should you include in the recommendation?

- A. AzCopy
- **B. Azure Site Recovery**
- C. Azure Import/Export service
- D. Azure Storage Explorer

答案: B

解題說明:

Site Recovery is used to manage and orchestrate disaster recovery of on-premises machines and Azure VMs. However, it can also be used for migration. Migration uses the same steps as disaster recovery with one exception. In a migration, failing machines over from your on-premises site is the final step. Unlike disaster recovery, you can't fail back to on-premises in a migration scenario.

問題 #103

You deploy an SAP environment on Azure by following the SAP workload on Azure planning and deployment checklist.

You need to verify whether Azure Diagnostics is enabled.

Which cmdlet should you run?

- A. Get-AzureVMAvailableExtension
- B. Test-VMConfigForSAP
- C. Test-AzDeployment
- **D. Get-AzVmDiagnosticsExtension**

答案: D

解題說明:

The Get-AzVmDiagnosticsExtension cmdlet gets the settings of the Azure Diagnostics extension on a virtual machine.

問題 #104

You have an SAP landscape on Azure that contains the virtual machines shown in the following table.

You need to recommend a recovery solution in the event of an Azure regional outage. The solution must meet the following requirements:

- * Minimize costs.
- * Minimize data loss.
- * Minimize administrative effort.

What should you recommend for each virtual machine? To answer, drag the appropriate services to the correct virtual machines. Each service may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.
