最受歡迎的CS0-003認證考試解析，覆蓋大量的CompTIA認證CS0-003考試知識點

我們都知道在現在這個競爭激烈的IT行業，擁有一些IT相關認證證書是很有必要的。IT認證證書是對你的IT專業知識和經驗的最好證明。在IT行業中CompTIA CS0-003 認證考試是一個很重要的認證考試，但是通過CompTIA CS0-003 認證考試是有一定難度的。但是為了能讓工作職位有所提升花點金錢選擇一個好的培訓機構來幫助你通過考試是值得的。VCEsoft擁有最新的針對CompTIA CS0-003認證考試的培訓資料，與真實的考試很95%相似性。如果你使用VCEsoft提供的培訓，你可以100%通過考試。如果你考試失敗，我們會全額退款。

CompTIA Cybersecurity Analyst (CySA+) 認證，也稱為CS0-003考試，是一項全球認可的認證，驗證個人在网络安全分析領域的知識和技能。這項認證旨在為希望專門從事网络安全領域並希望提高在檢測、預防和應對网络安全威脅方面的技能的專業人士設計。

最新的 CompTIA Cybersecurity Analyst CS0-003 免費考試真題 (Q464-Q469):

問題 #464

A penetration tester is conducting a test on an organization's software development website. The penetration tester sends the following request to the web interface:

Which of the following exploits is most likely being attempted?

- A. Directory traversal
- B. Cross-site scripting
- C. SQL injection

- D. Local file inclusion

答案: C

解題說明:

SQL injection is a type of attack that injects malicious SQL statements into a web application's input fields or parameters, in order to manipulate or access the underlying database. The request shown in the image contains an SQL injection attempt, as indicated by the "UNION SELECT" statement, which is used to combine the results of two or more queries. The attacker is trying to extract information from the database by appending the malicious query to the original one

問題 #465

An analyst is trying to capture anomalous traffic from a compromised host. Which of the following are the best tools for achieving this objective? (Select two).

- A. SOAR
- B. SIEM
- C. Vulnerability scanner
- D. tcpdump
- E. Nmap
- F. Wireshark

答案: D,F

解題說明:

To capture and analyze network traffic, the two best tools are:

tcpdump (Option A) - A command-line packet capture tool used for network traffic analysis.

Wireshark (Option D) - A GUI-based network packet analysis tool that provides deep inspection capabilities.

Option B (SIEM) is for log aggregation and does not capture traffic.

Option C (Vulnerability scanner) identifies weaknesses but does not capture network traffic.

Option E (Nmap) is used for network discovery and port scanning, not capturing traffic.

Option F (SOAR) automates security processes but does not capture traffic.

Thus, A (tcpdump) and D (Wireshark) are correct, as they are the best tools for capturing and analyzing anomalous network traffic.

問題 #466

Which of the following threat actors is most likely to target a company due to its questionable environmental policies?

- A. Lone wolf
- B. Organized crime
- C. Hactivist
- D. Nation-state

答案: C

解題說明:

Hactivists are threat actors who use cyberattacks to promote a social or political cause, such as environmentalism, human rights, or democracy. They may target companies that they perceive as violating their values or harming the public interest. Hactivists often use techniques such as defacing websites, launching denial-of-service attacks, or leaking sensitive data to expose or embarrass their targets.

問題 #467

An employee downloads a freeware program to change the desktop to the classic look of legacy Windows.

Shortly after the employee installs the program, a high volume of random DNS queries begin to originate from the system. An investigation on the system reveals the following:

Add-MpPreference -ExclusionPath '%Program File%\ksysconfig'

Which of the following is possibly occurring?

- A. Defense evasion
- B. Persistence

- C. Privilege escalation
- D. Credential harvesting

答案： A

解題說明：

Defense evasion is the technique of avoiding detection or prevention by security tools or mechanisms. In this case, the freeware program is likely a malware that generates random DNS queries to communicate with a command and control server or exfiltrate data. The command Add-MpPreference -ExclusionPath '%Program Files\kysysconfig' is used to add an exclusion path to Windows Defender, which is a built-in antivirus software, to prevent it from scanning the malware folder. 問題 #468

An organization has experienced a breach of customer transactions. Under the terms of PCI DSS, which of the following groups should the organization report the breach to?

- A. Card issuer
- B. Federal law enforcement
- C. Local law enforcement
- D. PCI Security Standards Council

答案： A

解題說明：

Explanation

Under the terms of PCI DSS, an organization that has experienced a breach of customer transactions should report the breach to the card issuer. The card issuer is the financial institution that issues the payment cards to the customers and that is responsible for authorizing and processing the transactions. The card issuer may have specific reporting requirements and procedures for the organization to follow in the event of a breach. The organization should also notify other parties that may be affected by the breach, such as customers, law enforcement, or regulators, depending on the nature and scope of the breach.
