For a company with history more than ten years, our SecOps-Generalist practice materials have developed into fully academic maturity. All content are arranged legibly. There are three kinds of SecOps-Generalist exam braindumps for your reference: the PDF, the Software and the APP online. All these versions of our SecOps-Generalist study questions are high-efficient. You can choose either one in accordance with your interests or habits.

Our SecOps-Generalist exam guide question is recognized as the standard and authorized study materials and is widely commended at home and abroad. Our SecOps-Generalist study materials boost superior advantages and the service of our products is perfect. We choose the most useful and typical questions and answers which contain the key points of the test and we try our best to use the least amount of questions and answers to showcase the most significant information. Our SecOps-Generalist learning guide provides a variety of functions to help the clients improve their learning. For example, the function to stimulate the exam helps the clients test their learning results of the SecOps-Generalist learning dump in an environment which is highly similar to the real exam.

**Valid New SecOps-Generalist Exam Cram | Latest Palo Alto Networks
SecOps-Generalist Latest Test Experience: Palo Alto Networks Security**

Operations Generalist

About the upcoming SecOps-Generalist exam, do you have mastered the key parts which the exam will test up to now? Everyone is conscious of the importance and only the smart one with smart way can make it. When new changes or knowledge are updated, our experts add additive content into our SecOps-Generalist latest material. They have always been in a trend of advancement. Admittedly, our SecOps-Generalist Real Questions are your best choice. We also estimate the following trend of exam questions may appear in the next exam according to syllabus. So they are the newest and also the most trustworthy SecOps-Generalist exam prep to obtain.

Palo Alto Networks Security Operations Generalist Sample Questions (Q125-Q130):

NEW QUESTION # 125

A security analyst receives an alert indicating that a user attempted to access a website categorized as 'malware' by the Palo Alto Networks NGFW using the Advanced URL Filtering subscription. The analyst wants to understand how this categorization and blocking occurred and the additional protective measures provided by Advanced URL Filtering beyond standard URL filtering. Which of the following capabilities are relevant to Advanced URL Filtering's ability to identify and block such malicious websites? (Select all that apply)

- A. Using a local, static database of known malicious URLs on the firewall.
- B. Blocking access to malicious domains or IPs associated with the URL, identified via correlation with other threat intelligence feeds (e.g., from WildFire or Threat prevention).
- C. Inspecting the content of the webpage for embedded exploits using the URL Filtering profile.
- D. Querying a large, dynamic cloud-based database of URLs and their categories.
- E. Real-time analysis of unknown URLs using machine learning to identify malicious characteristics.

Answer: B,D,E

Explanation:

Advanced URL Filtering leverages cloud intelligence and advanced techniques for robust web security. - Option A (Incorrect): While basic URL filtering might use a small local cache, Advanced URL Filtering primarily relies on a massive, dynamic cloud database. - Option B (Correct): Advanced URL Filtering's core strength is querying the vast, continuously updated cloud database for accurate categorization and threat status of URLs. - Option C (Correct): Advanced URL Filtering incorporates real-time analysis of previously unknown or uncategorized URLs using machine learning to detect malicious patterns and prevent access to new phishing or malware sites before they are added to the static database. - Option D (Correct): Advanced URL Filtering integrates with other threat intelligence sources. It can block access to malicious URLs and the associated IP addresses or domains that are identified as command-and-control or part of attack infrastructure through correlation with other threat intelligence feeds. - Option E (Incorrect): Inspecting webpage content for embedded exploits is the function of the Vulnerability Protection profile (part of Threat Prevention), not the URL Filtering profile.

NEW QUESTION # 126

Log stitching in Cortex XDR is used for:

Response:

- A. Correlating multiple security events to create a unified incident timeline
- B. Encrypting security logs for compliance purposes
- C. Automatically blocking all detected threats
- D. Aggregating network traffic data only

Answer: A

NEW QUESTION # 127

A SOC analyst receives an alert about a suspicious IP address attempting multiple login attempts across several endpoints. The analyst wants to automate the process of gathering intelligence on the IP before escalating the case.

Which Cortex XSOAR feature should be used to automate this enrichment process?

Response:

- A. Manually searching the IP address on different threat intelligence platforms

- B. Running a forensic investigation on each affected endpoint before taking action
- C. Manually forwarding the alert to another team for verification
- D. A Playbook that queries threat intelligence feeds and correlates IOCs

Answer: D

NEW QUESTION # 128

A company uses GlobalProtect on a self-managed PA-Series firewall to provide remote access. They have internal network segments defined by VLANs (e.g., Production Servers VLAN 10, Development Servers VLAN 20, User VLAN 30). Users connecting via GlobalProtect are assigned IP addresses from a dedicated VPN pool (e.g., 172.16.1.0/24). The security policy needs to restrict remote users' access to specific applications on specific server VLANs based on their user group and device compliance. How are Security Zones used to implement this segmentation and access control for remote user traffic interacting with internal resources? (Select all that apply)

- A. Define distinct Security Zones for each internal VLAN (e.g., 'Prod-Zone', 'Dev-Zone').
- B. Define a dedicated Security Zone for the GlobalProtect VPN user pool (e.g., 'VPN-Zone').
- C. Traffic between remote users (within the VPN IP pool) is implicitly allowed by the intra-zone-default rule because they are in the same 'VPN-Zone'.
- D. Create Security Policy rules with the Source Zone as 'VPN-Zone' and Destination Zone(s) as the respective internal server zones ('Prod-Zone', 'Dev-Zone').
- E. Ensure the GlobalProtect tunnel interface or subinterface that receives user traffic is assigned to the 'VPN-Zone'.

Answer: A,B,D,E

Explanation:

Segmenting remote user access to internal resources requires defining zones for both the remote users and the internal segments, and applying policy between them. - Option A (Correct): Internal network segments that need to be controlled must be defined as distinct Security Zones on the firewall. - Option B (Correct): The IP address pool assigned to GlobalProtect users needs to be associated with a dedicated Security Zone (the 'VPN-Zone'). This acts as the source zone for remote user traffic entering the firewall. - Option C (Correct): Security Policy rules are written to allow traffic flow from the remote user zone ('VPN-Zone') to the specific internal segments/zones they need access to ('Prod-Zone', 'Dev-Zone'). These rules will include criteria like User-ID, App-ID, etc. - Option D (Correct): The interface on the firewall that terminates the GlobalProtect tunnel and is configured with the VPN user IP pool must be assigned to the 'VPN-Zone' to ensure traffic originating from remote users is correctly associated with that zone for policy lookup. - Option E (Incorrect): While intra-zone traffic is implicitly allowed, this applies to traffic between interfaces assigned to the same zone. Traffic between different IPs within the same zone is still subject to inter-zone policy if the logical flow is between zones (which it isn't here, but the statement is about the users being in the zone, not interfaces). More importantly, traffic between remote users is usually explicitly controlled by policies within the 'VPN-Zone' if needed, or potentially goes out to the internet and back in if split-tunneling isn't configured, but the implicit allow applies to traffic traversing the firewall between interfaces in the same zone.

NEW QUESTION # 129

A company needs to provide secure network access for its employees working remotely from various locations. They require a solution that establishes an encrypted tunnel to the corporate network (or a cloud security platform), supports multi-factor authentication, and allows for policy enforcement based on user identity and device compliance. Which Palo Alto Networks product or service is specifically designed to meet these remote access requirements for mobile users?

- A. Prisma SD-WAN ION devices
- B. PA-Series firewalls deployed as internet edge devices.
- C. VM-Series firewalls deployed in the cloud.
- D. GlobalProtect (Client, Gateways, Portals)
- E. Cloud NGFW for AWS.

Answer: D

Explanation:

GlobalProtect is Palo Alto Networks' comprehensive remote access solution for mobile users. It consists of the GlobalProtect client software on the endpoint, GlobalProtect Gateways (on NGFWs or Prisma Access) that terminate the encrypted tunnels, and GlobalProtect Portals for client configuration and authentication. It fully supports user identity (User-ID integration), multi-factor authentication, and device posture checking (HIP). Option A is for site-to-site SD-WAN. Options B, D, and E are firewall form

factors that can host GlobalProtect Gateways but aren't the solution name itself.

NEW QUESTION # 130

.....

Our SecOps-Generalist study materials are famous for instant download, and if you want to start practicing as quickly as possible, you can have a try. After purchasing SecOps-Generalist exam dumps, you will receive the downloading link and password within ten minutes, and if you don't receive, just contact us. In addition, SecOps-Generalist Exam Dumps are high-quality, and they can ensure you pass the exam just one time. We also pass guarantee and money back guarantee if you fail to pass the exam, and money will be returned to your payment account.

SecOps-Generalist Latest Test Experience: <https://www.pass4training.com/SecOps-Generalist-pass-exam-training.html>

We can assure you the proficiency of our Palo Alto Networks SecOps-Generalist exam prep, In addition, the high quality of SecOps-Generalist exam resources differentiates us from many other products, Palo Alto Networks New SecOps-Generalist Exam Cram It will save a lot of money for you to compare participating in training course, If you are an efficient working man, purchasing valid SecOps-Generalist practice test files will be suitable for you as efficient exam materials will help you save a lot of time & energy on useless preparation, There must be many people who want to pass the SecOps-Generalist exam.

Defensive programming is the art of writing robust code that SecOps-Generalist can tolerate these events, And if things change along the way, we will update what we have written to reflect it.

We can assure you the proficiency of our Palo Alto Networks SecOps-Generalist Exam Prep, In addition, the high quality of SecOps-Generalist exam resources differentiates us from many other products.
