Our online test engine and the windows software of the PEGACPRSA22V1 guide materials can evaluate your exercises of the virtual exam and practice exam intelligently. Our calculation system of the PEGACPRSA22V1 study engine is designed subtly. Our evaluation process is absolutely correct. We are strictly in accordance with the detailed grading rules of the real exam. And our pass rate of the PEGACPRSA22V1 Exam Questions are high as 98% to 100%, it is unique in the market.

Pegasystems PEGACPRSA22V1 (Certified Pega Robotics System Architect 22) Certification Exam is a globally recognized certification exam that is designed to help individuals validate their skills and knowledge in Pega Robotic Automation technology. Certified Pega Robotics System Architect 22 certification exam covers a wide range of topics and is designed for individuals who have experience working with Pega Robotic Automation technology and want to take their skills to the next level. Certified Pega Robotics System Architect 22 certification exam is recognized by leading companies worldwide and is a valuable asset for individuals looking to advance their careers in the field of Pega Robotic Automation.

PEGACPRSA22V1 : Certified Pega Robotics System Architect 22 Study Question is Very Worthy of Study Efficiently - ExamcollectionPass

Success in the PEGACPRSA22V1 test of the Pegasystems PEGACPRSA22V1 credential is essential in today's industry to verify the skills and get well-paying jobs in reputed firms around the whole globe. Earning the Certified Pega Robotics System Architect 22 PEGACPRSA22V1 Certification sharpens your skills and helps you to accelerate your career in today's cut throat competition in the Pegasystems industry. It is not easy to clear the PEGACPRSA22V1 exam on the maiden attempt.

Pegasystems Certified Pega Robotics System Architect 22 Sample Questions (Q44-Q49):

NEW QUESTION # 44

Select the two statements that correctly describe application project items. (Choose Two)

- A. An application project item is the connection point between Pega Platform and an automation.
- B. An application project item orchestrates the deployment of a robotic solution and monitors the robots of the robot worker pool.
- C. An application project item integrates with Windows applications by using a self-hosted REST service through JavaScript.
- D. Using an application project item, users can integrate with Windows, web, or text applications that run on the client computer.

- E. Application project items have accessible properties, methods, and events that launch, monitor, and expose enterprise applications for automation.

Answer: D,E

Explanation:

Comprehensive and Detailed Explanation From Pega Robotics System Exact Extract:

An application project item in Pega Robot Studio represents an integration layer between the automation project and an external application (Windows, Web, or Text). Each project item defines how to launch, attach, and control the target application.

According to the Pega Robotics System Design and Implementation Guide, in the section "Application Project Items Overview", it states:

"An application project item defines the interaction between a robotic solution and an external application.

It provides properties, methods, and events that allow the automation to start, monitor, and control the target application.

Pega Robot Studio supports application project items for Windows, Web, and Text adapters, enabling integration with all major enterprise application types." Detailed Reasoning:

- * Option A is correct because application project items are the mechanism by which Pega Robotics integrates with Windows, Web, and Text applications on the client machine.
- * Option E is correct because each application project item exposes properties, methods, and events that control application behavior (for example, launch, close, monitor, or read UI data).
- * Option B is incorrect - Pega Platform integration is handled through Robot Manager or Runtime API, not through application project items.
- * Option C is incorrect - Application items do not use REST or JavaScript; these are specific to web connectors.
- * Option D is incorrect - Deployment orchestration and robot monitoring are performed by Robot Manager, not by an application project item.

Reference:Extracted and verified from Pega Robotics System Design and Implementation Guide, Application Project Items Overview and Integration section (Pega Robotics 19.1 and later).

NEW QUESTION # 45

In a Java application, you click a button to load a grid. The grid loads as a separate process under the Java application.

Which property allows you to interrogate the grid?

- A. TargetPath
- B. **HookChildProcesses**
- C. EnableMatchInProcess
- D. IgnoreMainBrowser

Answer: B

Explanation:

Comprehensive and Detailed Explanation From Pega Robotics System Exact Extract:

In Pega Robot Studio, when interrogating Java applications, sometimes a child process is created separately from the main application process. In such cases, controls in the child process cannot be detected unless the adapter is configured to attach to child processes as well.

According to the Pega Robotics System Design and Implementation Guide, in the section "Java Application Integration and Child Processes":

"For Java applications that spawn additional processes, set the HookChildProcesses property of the adapter to True.

This enables the adapter to attach to both the main process and any child processes created by the parent application, allowing interrogation and automation of controls within those secondary windows." Detailed Reasoning:

- * HookChildProcesses ensures that when a Java application spawns a new process (such as a popup or a grid), Pega Robotics attaches to and monitors that process.
- * Without enabling this property, the adapter would only recognize the primary Java process, leaving controls in secondary processes unrecognized.

Option Analysis:

- * A. HookChildProcesses: Correct. Allows interrogation of child processes.
- * B. EnableMatchInProcess: Incorrect. Used for controlling object matching within the same process context.
- * C. TargetPath: Incorrect. Defines executable location for adapters.
- * D. IgnoreMainBrowser: Incorrect. Related to web adapters, not Java applications.

Reference:Extracted and verified from Pega Robotics System Design and Implementation Guide, Java Adapter Configuration and HookChildProcesses Property section (Pega Robotics 19.1 and later).

NEW QUESTION # 46

The variable varInput is a String that holds the value What is the output?

What is the outcome of the above automation?

- A. The variable varOutput ends with B.
- B. The variable varOutput ends with A.
- C. An exception is thrown.
- D. The variable varOutput ends with C.

Answer: A

NEW QUESTION # 47

Which of the following controls cannot be added to the Windows form?

- A. ComboBox
- B. PictureBox
- C. Pointer
- D. ProgressBar

Answer: C

NEW QUESTION # 48

You interrogated a web application. All controls and objects matched, and the automations worked as coded.

During the pilot, the solution failed on the web application. The IT department had released a new version of the web application. Upon review of the new version, you determined that the web page hierarchy changed.

Which interrogation option do you use to correct the solution?

- A. Default
- B. Select Element
- C. Replace Control
- D. Debug Matching

Answer: C

Explanation:
