GAQM Certified Data Centre Specialist (CDCS) Sample Questions (Q21-Q26):

NEW QUESTION # 21
Which power distribution component is often used when many electrical devices are enclosed proximity especially with audio, video and computers?

- A. Backup server
- B. Outlet strips
- C. Server plug
- D. Power distribution units (PDU)

Answer: D

Explanation:
The best option for enclosing many electrical devices in proximity, especially with audio, video and computers, is Power Distribution Units (PDUs). PDUs are designed to provide power to multiple devices using a single power source, such as a wall outlet or a generator, while providing protection against power surges. PDUs are generally equipped with multiple outlets to allow for a variety of electrical devices to be connected and powered simultaneously.

NEW QUESTION # 22
What is a Data Center?

- A. A building or a portion of a building whose primary function is to house a computer room and its related support areas
- B. A room in a building dedicated to monitoring data and information.
- C. A building or a portion of a building where debugging takes place
- D. A building or portion of a building whose primary function is to research new data.

Answer: A

Explanation:
A building or a portion of a building whose primary function is to house a computer room and its related support areas. A Data Center is a secure, temperature-controlled environment that houses computer systems, equipment, and associated components. It is typically used to store, process, and distribute large amounts of data and information. Data Centers typically include server racks, storage arrays, network switches, firewalls, and other components necessary for the operation of computer systems.

NEW QUESTION # 23
Which type of outlet is used for non-computing devices?

- A. Harmonic
- B. Convenience

- C. Static
- D. Grounding

Answer: B

Explanation:

Explanation

Convenience outlets, also known as duplex receptacles or wall outlets, are used to provide power to non-computing devices, such as lamps, televisions, and other household appliances. They are typically found in residential and commercial buildings and are connected to a circuit breaker or fuse for protection against overloading and electrical fires

NEW QUESTION # 24

Which type of power can be a source available to the data center that takes over the function of supplying when utility power is unavailable?

- A. Alternate
- B. Passive
- C. Standby
- D. Active

Answer: C

Explanation:

Explanation

Standby power, also known as backup power, is a type of power that can be a source available to the data center that takes over the function of supplying when utility power is unavailable. Standby power systems are designed to provide power to critical loads in the event of a power outage, and can include generators, uninterruptible power supplies (UPS), and batteries. Standby power systems can be used to provide power to the data center for a short period of time, such as a few hours or days, until utility power is restored.

Passive, Active and Alternate are not specific type of power sources used in data center. They are terms used in different context and have different meaning.

NEW QUESTION # 25

_____ measures the amount of electrical current flowing through a circuit during a specific time interval.

- A. Volts
- B. Watts
- C. Ohm
- D. Ampere

Answer: D

Explanation:

An ampere (A) is the unit of measurement for electric current. It measures the amount of electrical current flowing through a circuit during a specific time interval. The ampere is named after Andre-Marie Ampere, a French mathematician and physicist who was one of the main discoverers of electromagnetism.

Ohm (#) is the unit of measurement for electric resistance, which is the opposition to the flow of an electric current through a circuit.

Volt (V) is the unit of measurement for electric potential difference, which is the energy required per unit charge to move a test charge between two places in a static electric field.

Watt (W) is the unit of measurement for power, which is the rate at which energy is used or generated in an electrical circuit.
