

# CCCS-203b Official Practice Test - CCCS-203b Testing Center

The CrowdStrike sector is an ever-evolving and rapidly growing industry that is crucial in shaping our lives today. With the growing demand for skilled CrowdStrike professionals, obtaining CrowdStrike Certified Cloud Specialist - 2025 Version (CCCS-203b) certification exam has become increasingly important for those who are looking to advance their careers and stay competitive in the job market.

As we all know that the higher position always ask for the more capable man. So your strength and efficiency will really bring you more job opportunities. You must complete your goals in the shortest possible time. How to make it? Our CCCS-203b exam materials can give you a lot of help. Our CCCS-203b Study Guide is famous for its high-effective and high-efficiency advantages. If you study with our CCCS-203b practice engine, you can get the latest and specialized information in the subject and you will be rewarded with the certification.

## CCCS-203b Testing Center - CCCS-203b Original Questions

The three versions of our CCCS-203b exam questions have their own unique characteristics. The PDF version of CCCS-203b training materials is convenient for you to print, the software version can provide practice test for you and the online version is for you to read anywhere at any time. If you are hesitating about which version should you choose, you can download our CCCS-203b free demo first to get a firsthand experience before you make any decision. You will love our CCCS-203b study guide for sure!

## CrowdStrike Certified Cloud Specialist - 2025 Version Sample Questions (Q247-Q252):

### NEW QUESTION # 247

A security team is in the process of registering their organization's cloud accounts with CrowdStrike Falcon Cloud. During the registration process, they need to ensure that they have granted the required permissions for proper monitoring and threat detection. What is the first step they should take when registering a new cloud account?

- A. Generate an API key in the CrowdStrike Falcon Console and manually add it to the cloud provider's IAM policies.

- B. Create a service-linked role in the cloud provider and allow CrowdStrike Falcon to assume the role for security monitoring.
- C. Manually configure CrowdStrike Falcon to ingest log data from the cloud provider's security audit logs before registration.
- D. Install the CrowdStrike Falcon sensor on all virtual machines before starting the cloud registration process.

**Answer: B**

Explanation:

Option A: Installing Falcon sensors on workloads is important for endpoint protection but is not required before registering a cloud account. Registration enables cloud-level visibility, while sensors provide endpoint protection.

Option B: Falcon uses role-based access to retrieve security data instead of requiring manual log ingestion at the time of registration. Log integration can be set up later for additional visibility.

Option C: While API keys are used for integrations, cloud account registration relies on role-based access rather than manually adding keys to IAM policies.

Option D: CrowdStrike Falcon requires a service-linked role in the cloud provider (AWS, Azure, GCP) to assume the necessary permissions for security monitoring. This role allows Falcon to collect metadata, scan workloads, and detect threats without requiring manual log ingestion.

#### NEW QUESTION # 248

Which two configurations are necessary for successful deployment of the Falcon Container Sensor in Kubernetes? (Choose two)

- A. Manual agent token import
- B. DaemonSet deployment configuration
- C. Access to Docker Hub
- D. Correct namespace and permissions

**Answer: B,D**

#### NEW QUESTION # 249

What is required to successfully register a cloud account with CrowdStrike Falcon?

- A. A user must manually whitelist all workloads in the cloud account before integrating with CrowdStrike Falcon.
- B. Read-only access to the cloud account is sufficient for monitoring and configuration with Falcon.
- C. The cloud account must have an existing CrowdStrike agent installed on all workloads.
- D. Administrative credentials with programmatic access to the cloud account are required to enable Falcon integration and access resources.

**Answer: D**

Explanation:

Option A: While Falcon provides visibility into workloads, manual whitelisting of workloads is not a requirement for account registration. The platform automatically discovers workloads after the account is successfully registered and integrated.

Option B: Administrative credentials with programmatic access allow CrowdStrike Falcon to integrate with the cloud account, retrieve resource metadata, monitor activity, and enforce security controls. These credentials are typically granted through roles or policies in the cloud provider's management console.

Option C: Read-only access is not sufficient because Falcon requires permissions to execute specific tasks, such as managing policies, detecting misconfigurations, and enforcing security controls. Administrative credentials with programmatic access are essential for full functionality.

Option D: Installing the CrowdStrike agent on workloads is a separate step after account registration. Cloud account registration focuses on setting up access and permissions to integrate with Falcon for visibility and management. The agent installation is workload-specific, not account-level.

#### NEW QUESTION # 250

What is the primary purpose of Falcon Fusion workflows in CrowdStrike's cloud security ecosystem?

- A. To automate responses to security events based on predefined triggers.
- B. To monitor and block unauthorized access attempts to cloud resources.
- C. To create new user accounts and assign permissions in CrowdStrike Falcon.

- D. To analyze network traffic for anomalies in real-time.

**Answer: A**

Explanation:

Option A: Falcon Fusion workflows are designed to create automated, action-oriented workflows that trigger in response to specific events. This reduces manual intervention and improves incident response times.

Option B: Falcon Fusion does not analyze network traffic directly. This function is more aligned with Falcon's EDR (Endpoint Detection and Response) capabilities or network security tools.

Option C: While Falcon does monitor and block threats, this is not the specific function of Falcon Fusion workflows. Falcon Fusion focuses on automating workflows in response to events, not directly handling access control.

Option D: User account management is handled through administrative tools and settings within the Falcon console, not Falcon Fusion workflows.

#### NEW QUESTION # 251

A customer is attempting to register an Azure cloud account in CrowdStrike Falcon, but the registration fails with an error: 1. "App registration not found." What is the most likely issue causing this error?

- **A. The Azure Active Directory application registration has not been created or configured.**
- B. The Azure tenant is not using default security settings.
- C. The customer is using an outdated version of the CrowdStrike Falcon console.
- D. The CrowdStrike Falcon license does not include Azure integration.

**Answer: A**

Explanation:

Option A: CrowdStrike registration does not require Azure tenants to use default security settings.

Security settings can influence permissions, but the error in question is specific to the application registration process.

Option B: While licensing can limit certain functionalities, it does not directly cause the "App registration not found" error. Licensing issues are usually flagged in the CrowdStrike console or during setup.

Option C: The version of the console does not impact the ability to register a cloud account.

Console updates usually address feature enhancements or bug fixes, not core registration functionality.

Option D: This is the correct answer because the error specifically points to a missing or misconfigured Azure Active Directory application registration. CrowdStrike requires an application registration in Azure AD to authenticate and access resources in the customer's Azure environment. If this step is missed or done incorrectly, the registration will fail.

#### NEW QUESTION # 252

.....

The only aim of our company is to help each customer pass their exam as well as getting the important certification in a short time. If you want to pass your exam and get the CCCS-203b certification which is crucial for you successfully, I highly recommend that you should choose the CCCS-203b Study Materials from our company so that you can get a good understanding of the exam that you are going to prepare for.

**CCCS-203b Testing Center:** [https://www.realvce.com/CCCS-203b\\_free-dumps.html](https://www.realvce.com/CCCS-203b_free-dumps.html)

Our brand fame in the industry is famous for our excellent CCCS-203b study guide, And besides, you can achieve the certification for sure with our CCCS-203b study guide, Our CCCS-203b training material will help you get through the difficulties by passing exam and obtain a useful certification, As you can see, our CCCS-203b exam completely accords with your aspirations, Don't worry, with our CCCS-203b Study Material, your preparing for the exam will be more efficient and easily.

Ninety-nine point nine nine percent of the time, people CCCS-203b are very professional, fun, and kind to one another, is a software engineer in the Data Center Group at Cisco.

Our brand fame in the industry is famous for our excellent CCCS-203b Study Guide, And besides, you can achieve the certification for sure with our CCCS-203b study guide.

**Pass Guaranteed 2026 High Hit-Rate CrowdStrike CCCS-203b Official Practice Test**

Our CCCS-203b training material will help you get through the difficulties by passing exam and obtain a useful certification, As you can see, our CCCS-203b exam completely accords with your aspirations.
