

2026 VMware 2V0-11.25: Accurate VMware Cloud Foundation 5.2 Administrator Related Certifications

DOWNLOAD the newest TrainingDumps 2V0-11.25 PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=1y4ejyBd6hytQLNv-liEOjEXCecId7jMN>

Now we can say that VMware Cloud Foundation 5.2 Administrator (2V0-11.25) exam questions are real and top-notch VMware 2V0-11.25 exam questions that you can expect in the upcoming VMware 2V0-11.25 exam. In this way, you can easily pass the VMware Cloud Foundation 5.2 Administrator (2V0-11.25) exam with good scores. The countless 2V0-11.25 Exam candidates have passed their dream VMware 2V0-11.25 certification exam and they all got help from real, valid, and updated 2V0-11.25 practice questions, You can also trust on TrainingDumps and start preparation with confidence.

TrainingDumps ensures your success with money back assurance. There is no chance of losing the exam if you rely on TrainingDumps's 2V0-11.25 Study Guides and dumps. If you do not get through the exam, you take back your money. The money offer is the best evidence on the remarkable content of TrainingDumps.

2V0-11.25 Valid Exam Fee, 2V0-11.25 Reliable Test Preparation

Many candidates do not have actual combat experience, for the qualification examination is the first time to attend, so about how to get the test 2V0-11.25 certification didn't own a set of methods, and cost a lot of time to do something that has no value. With our 2V0-11.25 Exam Practice, you will feel much relax for the advantages of high-efficiency and accurate positioning on the content and formats according to the candidates' interests and hobbies. And you will be bound to pass the exam with our 2V0-11.25 learning guide!

VMware 2V0-11.25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">VMware by Broadcom Solution: This section of the exam measures skills of the cloud administrator and covers identifying VMware Cloud Foundation components like vSphere, vSAN, and NSX, as well as their architecture, including stretched configurations. It also assesses knowledge of requirements for implementing private cloud solutions, use cases for VMware Aria Suite components, vSphere IaaS control plane, Data Services Manager, and VMware Cloud Foundation Add-Ons. The focus is on the ability to recognize and apply the correct VMware solutions for various enterprise scenarios.

Topic 2	<ul style="list-style-type: none"> • Troubleshoot and Optimize the VMware by Broadcom Solution: This section of the exam measures skills of the cloud infrastructure support engineer and covers diagnosing and resolving technical issues related to VMware Cloud Foundation deployment and operations. It includes troubleshooting the deployment process, vSphere, networking, vSAN, SDDC Manager, and Aria Suite. The section also evaluates the ability to optimize infrastructure performance, manage resources, and ensure efficient operation, focusing on the practical aspects of maintaining and enhancing VMware Cloud Foundation environments.
Topic 3	<ul style="list-style-type: none"> • IT Architectures, Technologies, Standards: There are no testable objectives in this section. However, this area establishes the foundational knowledge expected of cloud administrators, such as understanding basic IT infrastructure, virtualization, and cloud models. This section is relevant for cloud administrators and infrastructure engineers.
Topic 4	<ul style="list-style-type: none"> • Install, Configure, Administrate the VMware by Broadcom Solution: This section of the exam measures skills of the VMware Cloud Foundation administrator and covers the installation and configuration processes for VMware Cloud Foundation components, deploying and configuring management domains, NSX Edge Clusters, and the VMware Aria Suite Lifecycle. It assesses the ability to deploy workload domains, enable vSphere IaaS control plane, create vSphere namespaces, manage stretched clusters, and use VMware Cloud Foundation APIs. Candidates are also tested on scaling deployments, performing Day 2 operations like backup, recovery, lifecycle management, VM lifecycle management, configuring networking and storage, managing ESXi hosts, implementing encryption, and operationalizing VMware NSX, vSAN, and Aria Suite. The section is comprehensive, targeting those responsible for the ongoing administration and optimization of VMware environments.
Topic 5	<ul style="list-style-type: none"> • Plan and Design the VMware by Broadcom Solution: There are no testable objectives in this section. Still, it is intended for solution architects who need to plan and design VMware Cloud Foundation deployments, focusing on sizing, architecture selection, and network • storage design.

VMware Cloud Foundation 5.2 Administrator Sample Questions (Q63-Q68):

NEW QUESTION # 63

An administrator needs to perform lifecycle management for their VMware Cloud Foundation components, including upgrading the SDDC Manager.

Which three steps should be followed to successfully upgrade VMware Cloud Foundation? (Choose three.)

- A. Perform a pre-check to ensure that all components are compatible with the new version.
- B. Use the SDDC Manager UI to initiate the upgrade process.
- C. Manually download the update bundles with a secure browser from the VMware website.
- D. Disable DRS and HA on all clusters before initiating the upgrade.
- E. Backup all VMware Cloud Foundation components before starting the upgrade.

Answer: A,B,E

Explanation:

Backing up all VMware Cloud Foundation components ensures that data is protected in case the upgrade process encounters issues.

Performing a pre-check is important to verify that all components are compatible with the new version to avoid compatibility issues during the upgrade process.

The SDDC Manager UI is used to initiate the upgrade process, providing a guided and consistent method for upgrading the VMware Cloud Foundation environment.

NEW QUESTION # 64

An administrator is configuring a newly provisioned workload domain within a VMware Cloud Foundation (VCF) environment. The workload domain will contain virtual machines hosting applications which are considered business critical, and the administrator wants to ensure that the virtual machines are given priority over other network traffic types.

Which three steps should the administrator perform to achieve this goal? (Choose three.)

- A. Disable bandwidth resource allocations for all other traffic types to ensure virtual machine traffic gets full bandwidth.
- **B. Enable Network I/O control (NIOC) on the workload domain vSphere Distributed Switch**
- C. Create a new vSphere Distributed Switch (vDS) specifically for virtual machine traffic.
- **D. Configure a new network resource pool to assign shares, limits and reservations for the virtual machine traffic.**
- **E. Configure a bandwidth resource allocation for the virtual machine traffic type.**
- F. Configure dedicated physical network adapters for the ESX management traffic.

Answer: B,D,E

Explanation:

Defining a bandwidth allocation for the VM traffic type lets you reserve throughput for business-critical VMs.

NIOC must be enabled on the workload domain's vDS to allow policy enforcement.

Creating a network resource pool for VM traffic lets you assign appropriate shares, limits, and reservations to prioritize that traffic.

NEW QUESTION # 65

What is the primary benefit of using HCX Replication Assisted vMotion (RAV) for VM migration?

- A. It requires no configuration changes to the VM(s) within the destination environment.
- B. It performs a test migration to ensure compatibility.
- C. It provides the fastest migration method by powering off the VM(s) before initiating the migration.
- **D. It ensures zero downtime to the VM(s).**

Answer: D

Explanation:

According to the VMware HCX User Guide and the VMware Cloud Foundation 5.2 Documentation, HCX Replication Assisted vMotion (RAV) is designed to provide a seamless migration of VMs across environments with no downtime to the workload.

Exact Extract from the VMware HCX User Guide:

"HCX Replication Assisted vMotion (RAV) provides zero-downtime migration for virtual machines, combining the benefits of vMotion with replication technologies. This allows VMs to continue running without disruption during the migration process, ensuring uninterrupted service for business-critical workloads." (VMware HCX User Guide - VM Mobility Methods) Why Not the Other Options?

A: RAV does not eliminate all configuration changes; network and other settings may still need updates depending on environments.

B: RAV does not perform a test migration; test migration is a feature of other migration methods.

D: RAV is not a cold migration method; it avoids powering off the VMs and maintains their availability throughout.

Summary:

The primary benefit of using HCX Replication Assisted vMotion (RAV) for VM migration is that it ensures zero downtime to the VM(s) (C), as stated in the official VMware documentation.

NEW QUESTION # 66

Which is the appropriate first action to take to resolve dropped network packets on an ESXi host?

- A. Migrate VMs to another data store
- **B. Check physical network switch configuration**
- C. Increase the CPU and memory allocation for VMs
- D. Enable Storage I/O Control

Answer: B

Explanation:

Dropped network packets are often caused by misconfigurations or issues at the physical network layer. Checking the physical network switch configuration is the first step to ensure that the network settings, such as VLANs, uplinks, and port configurations, are correctly set up. This ensures proper connectivity and traffic flow for the ESXi host and the VMs.

NEW QUESTION # 67

What three steps are required to commission a new host into the SDDC Manager inventory? (Choose three.)

- **A. A supported version of ESXi installed on the host.**

- B. Update the DNS records and add the host directly to the SDDC Manager appliance using the root credentials.
- C. Manually import the host into the vCenter Server inventory and assign it to a cluster.
- **D. Delete all disk partitions on HDD/SSD.**
- **E. Self-signed certificate regenerated based on FQDN of host.**
- F. Four NIC ports with a minimum 10 Gbps speed.

Answer: A,D,E

Explanation:

As documented in the official VMware Cloud Foundation Administration Guide for Host Commissioning:

A . Self-signed certificate regenerated based on FQDN of host.

Exact Extract:

"During the commissioning process, SDDC Manager regenerates a self-signed certificate for the host based on its FQDN to ensure secure communications and integration with the management domain." C . Delete all disk partitions on HDD/SSD.

Exact Extract:

"Before commissioning, all partitions must be deleted from the host's disks to allow SDDC Manager to claim storage for vSAN or other use. Failure to remove partitions can cause the commissioning workflow to fail." F . A supported version of ESXi installed on the host.

Exact Extract:

"The host must be installed with a version of ESXi that is supported by the current release of VMware Cloud Foundation. Unsupported versions will cause the commissioning operation to fail." Why Not the Other Options?

B: While having multiple 10Gbps NICs is recommended, it is not a strict commissioning requirement for all host profiles.

D: Updating DNS is necessary, but the step of "adding the host directly to SDDC Manager using root credentials" is incomplete, as SDDC Manager itself performs the addition and validation steps.

E: Manually adding hosts to vCenter is not permitted; SDDC Manager must orchestrate the entire host onboarding process.

Summary:

The three required steps to commission a new host into the SDDC Manager inventory are:

A . Regenerate the self-signed certificate based on the FQDN,

C . Delete all disk partitions on HDD/SSD,

F . Ensure a supported version of ESXi is installed.

These steps are explicitly outlined in the VMware Cloud Foundation host commissioning documentation.

NEW QUESTION # 68

.....

If your answer is yes then you need to start Channel Partner Program 2V0-11.25 test preparation with VMware 2V0-11.25 PDF Questions and practice tests. With the TrainingDumps Channel Partner Program VMware Cloud Foundation 5.2 Administrator 2V0-11.25 Practice Test questions you can prepare yourself shortly for the final VMware Cloud Foundation 5.2 Administrator 2V0-11.25 exam.
