Dear customers, if you are prepared to take the exam with the help of excellent D-PVM-OE-01 learning materials on our website, the choice is made brilliant. Our D-PVM-OE-01 training materials are your excellent choices, especially helpful for those who want to pass the exam without bountiful time and eager to get through it successfully. Let us take a try of our amazing D-PVM-OE-01 Exam Questions and know the advantages first!

## EMC D-PVM-OE-01 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>PowerMax Family Local and Remote Replication Concepts: This section of the exam measures the skills of Backup and Recovery Specialists and covers the features and functionalities of TimeFinder SnapVX. Candidates must differentiate between SnapVX snapshots and clones while understanding their role in data protection. One key skill assessed is comparing the use cases of snapshots and clones.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>PowerMax Family Storage Provisioning: This section of the exam measures the skills of Storage Administrators and covers the architecture, configurations, and management of the PowerMax family. Candidates must understand system models, port and device management, and provisioning methods using Unisphere for PowerMax. They are expected to perform service level-based provisioning and allocate storage through auto-provisioning groups. One key skill assessed is configuring storage using Unisphere for PowerMax.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>PowerMax Family Management in a Virtual Environment: This section of the exam measures the skills of Virtualization Engineers and evaluates the integration of PowerMax storage in virtualized environments. Candidates must understand VMware vSphere, the functionalities of Virtual Storage Integrator (VSI), and how to monitor virtualized workloads using Unisphere for PowerMax. One critical skill assessed is tracking virtual machine storage performance.</li></ul>

Topic 4	<ul style="list-style-type: none"> <li>PowerMax Family Business Continuity Administration: This section of the exam measures the skills of Disaster Recovery Engineers and focuses on replication technologies used for business continuity. Candidates must perform SnapVX and Clone operations using Unisphere for PowerMax and understand Symmetrix Remote Data Facility (SRDF) replication. They must also execute SRDF operations using Unisphere and SYMCLI.</li> </ul>

LatestCram is an excellent IT certification examination information website. In LatestCram you can find exam tips and materials about EMC certification D-PVM-OE-01 exam. You can also free download part of examination questions and answers about EMC D-PVM-OE-01 in LatestCram. LatestCram will timely provide you free updates about EMC D-PVM-OE-01 exam materials. Besides, the exam materials we sold are to provide the answers. Our IT experts team will continue to take advantage of professional experience to come up with accurate and detailed exam practice questions to help you pass the exam. In short, we will provide you with everything you need about EMC Certification D-PVM-OE-01 Exam.

## EMC Dell Technologies PowerMax Operate Sample Questions (Q13-Q18):

### NEW QUESTION # 13

A company is setting up a multi-tenant environment where multiple departments share the same storage array with SID 1762. The IT department requires 2 TB of storage to be available on the ESXi1 host. Use "ESXi1\_SG" for the storage group name, create a port group with Dir- Ports "OR-1C:0 and OR-2C:0," and leave all other settings at their default.

Using the simulator, provision the storage required with a single volume using auto-provisioning groups.

**Answer:**

Explanation:

See the explanation for step by step solution.

Explanation:

We need to provision 2 TB of storage to the ESXi1 host on a PowerMax array (SID 1762) using Unisphere, in a multi-tenant environment. We'll use auto-provisioning with the following specifics:

- \* Storage Group Name:ESXi1\_SG
- \* Port Group:(A new port group with Directors OR-1C:0 and OR-2C:0)
- \* Volume Size:2 TB (single volume)
- \* Other Settings:Default

Here are the step-by-step instructions, tailored for the Unisphere simulator as described in the question:

Steps:

1. Launch the Simulator and Navigate to Storage Groups

- \* Open Unisphere for PowerMax in your web browser.
- \* You should already be logged in to the simulator, with the PowerMax array with SID 1762.
- \* In the left-hand navigation pane, click onStorage>Storage Groups.

2. Initiate Storage Group Creation

- \* Click theCreatebutton (likely a plus "+" icon) in the Storage Groups section to start the Create Storage Group wizard.

3. Name the Storage Group

- \* In the "Create Storage Group" wizard:
- \* Storage Group Name:Enter ESXi1\_SG.
- \* Enable FAST/Service Level:Do not check this option, as we are leaving all other settings at their default.
- \* ClickNextorContinue(the exact wording might vary).

4. Add Volumes

- \* Ensure"Create new volumes"is selected.
- \* Number of Volumes:Enter 1.
- \* Volume Size:
- \* Enter 2.
- \* Select TB from the dropdown for the unit.
- \* ClickNext.

5. Create the Port Group

- \* You should now be on the "Connectivity" or "Host" step, where you will add a new port group.
- \* Select "Create Port Group"
- \* Port Group Name:Give the new port group a name. You can use something descriptive like "ESXi1\_PG," or any name that follows your organization's naming conventions.
- \* Select Ports:
- \* Find and select the following Directors and ports from the list of available ports:

\* OR-1C:0

\* OR-2C:0

\* Note:The simulator may not allow you to highlight the exact director ports as in a production environment. It will likely display all directors and ports under the selected array. Just ensure they are selected as part of the port group.

\* ClickNext.

6. Add host to the Masking View

- \* Select "Add Host"
- \* Select "Create New Host"
- \* Host Name:ESXi1

\* Initiators:You don't have specific initiators to add in this simulation, so you can skip this part or add any from the available options. This is because we are working within a simulated environment.

\* ClickNext

7. Review and Create

- \* You'll be presented with a summary page that shows:
- \* Storage Group: ESXi1\_SG
- \* Volume: 1 x 2 TB volume
- \* Port Group: (The new port group you created with OR-1C:0 and OR-2C:0)
- \* Host: ESXi1
- \* Carefully review all the settings to make sure they are correct.
- \* ClickRun NoworFinish(or similar wording) to create the storage group, volume, port group, and masking view.

8. Verification (Optional)

- \* After the operation completes, you can verify the results:
- \* Go back to theStorage Groupslist. You should see the ESXi1\_SG storage group.
- \* Click on ESXi1\_SG to view its details. You should see the 2 TB volume and the associated host (ESXi1) and port group.
- \* You can also navigate toHosts>Port Groupsto verify that the new port group was created correctly.
- \* Finally, you can navigate toHosts>Masking Viewsto verify that a masking view was created correctly.

**NEW QUESTION # 14**

If a data reduction hardware I/O module fails, what happens to incoming data?

- A. Hardware I/O module in the partner director within the engine is used to reduce data
- **B. Software-based reduction is used to reduce data**
- C. Data is written to disk without any data reduction
- D. Incoming data is held in cache until the failed hardware I/O module is replaced

**Answer: B**

#### NEW QUESTION # 15

When reviewing storage group compliance for a specific storage group, you notice that the weighted response time for the storage group over the last four hours is compliant. Upon further research, you see that the weighted response time for the last two weeks does not meet the defined response time for the assigned service level.

What is the overall compliance status for the storage group?

- A. Stable
- **B. Non-compliant**
- C. Critical
- D. Marginal

**Answer: B**

Explanation:

Step by Step Comprehensive Detailed Explanation:

When evaluating storage group compliance in PowerMax, Unisphere considers the weighted response time of the storage group against its defined service level objectives (SLOs). The compliance status is determined based on how well the storage group meets its response time goals over different time periods.

In this case, even though the storage group's weighted response time is compliant over the last four hours, the fact that it does not meet the defined response time for the last two weeks indicates an overall non-compliant status.

This means that while the storage group might be performing adequately in the short term, it has not consistently met its performance goals over a longer period. This could indicate potential performance issues or the need for adjustments to the storage group's configuration or service level.

Why other options are incorrect:

\* A. Stable: A stable status would indicate consistent compliance over all time periods.

\* B. Marginal: A marginal status might suggest borderline performance, but not necessarily a clear violation of SLOs.

\* D. Critical: A critical status would likely indicate a severe performance issue or a significant breach of SLOs.

#### NEW QUESTION # 16

Which tasks can a storage administrator manage from the Data Protection menu in the Unisphere for PowerMax?

- A. Convert front-end ports to SRDF ports
- **B. Configure and manage SRDF groups**
- C. Configure Data Protection for z systems
- D. Review the audit log for unwanted logins

**Answer: B**

Explanation:

Step by Step Comprehensive Detailed Explanation:

The "Data Protection" menu in Unisphere for PowerMax provides a centralized location for managing various data protection features and functionalities. Specifically, it allows storage administrators to:

\* Configure and manage SRDF groups: SRDF (Symmetrix Remote Data Facility) is a key technology for disaster recovery and data replication in PowerMax. The Data Protection menu enables administrators to create, modify, and monitor SRDF groups, establish

replication relationships between devices, and control replication settings.

Why other options are incorrect:

\* A. Convert front-end ports to SRDF ports: This is typically done through the "System > Hardware" or "Connectivity" sections of Unisphere, where port configurations are managed.

\* C. Configure Data Protection for z Systems: While PowerMax supports mainframe environments, the specific configuration for z Systems might involve specialized tools or interfaces.

\* D. Review the audit log for unwanted logins: Audit logs and security-related events are usually found in the "Monitoring" or "Security" sections of Unisphere.

### NEW QUESTION # 17

A systems administrator wants to move an application to VMAX3 storage. The application being migrated has no performance information available, including response time and average I/O size.

Based on Dell Technologies' recommendations, which service level should be assigned?

- A. Optimized
- B. Diamond
- C. Bronze
- D. Gold

Answer: A
