Salesforce Certified Identity and Access Management Architect Sample Questions (Q207-Q212):

NEW QUESTION # 207
Universal Containers (UC) has a classified information system that its call center team uses only when they are working on a case with a record type "Classified". They are only allowed to access the system when they own an open "Classified" case, and their access to the system is removed at all other times. They would like to implement SAML SSO eith Salesforce as the Idp, and

automatically allow or deny the staff's access to the classified information system based on whether they currently own an open "Classified" case record when they try to access the system using SSO. What is the recommended solution for automatically allowing or denying the access to the classified information system based on the open "classified" case record criteria?

- A. Use Salesforce reports to identify users that currently owns open "Classified" cases and should be granted access to the Classified information system.
- B. Use Custom SAML JIT Provisioning to dynamically query the user's open "Classified" cases when attempting to access the classified information system.
- C. Use a Common Connected App Handler using Apex to dynamically allow access to the system based on whether the staff owns any open "Classified" Cases.
- D. Use Apex trigger on case to dynamically assign permission Sets that Grant access when an user is assigned with an open "Classified" case, and remove it when the case is closed.

Answer: C

NEW QUESTION # 208
A global fitness equipment manufacturer is planning to sell fitness tracking devices and has the following requirements:
1) Customer purchases the device.
2) Customer registers the device using their mobile app.
3) A case should automatically be created in Salesforce and associated with the customer's account in cases where the device registers issues with tracking.
Which OAuth flow should be used to meet these requirements?

- A. OAuth 2.0 Username-Password Flow
- B. OAuth 2.0 Asset Token Flow
- C. OAuth 2.0 User-Agent Flow
- D. OAuth 2.0 SAML Bearer Assertion Flow

Answer: B

Explanation:
OAuth 2.0 Asset Token Flow is the flow that allows customers to register their devices with Salesforce and get an access token that can be used to create cases. The other flows are not suitable for this use case.
References: OAuth Authorization Flows Trailblazer Community Documentation

NEW QUESTION # 209
Northern Trail Outfitters (NTO) has an existing custom business-to-consumer (B2C) website that does NOT support single sign-on standards, such as Security Assertion Markup Language (SAMi) or OAuth. NTO wants to use Salesforce Identity to register and authenticate new customers on the website.
Which two Salesforce features should an identity architect use in order to provide username/password authentication for the website?
Choose 2 answers

- A. Connected Apps
- B. Embedded Login
- C. Delegated Authentication
- D. Identity Connect

Answer: B,C

NEW QUESTION # 210
Universal containers (UC) has implemented SAML SSO to enable seamless access across multiple applications. UC has regional salesforce orgs and wants it's users to be able to access them from their main Salesforce org seamless. Which action should an architect recommend?

- A. Configure the regional salesforce orgs as Identity Providers.
- B. Configure the main salesforce org as the Identity provider.
- C. Configure the main salesforce org as an authentication provider.

- D. Configure the main Salesforce org as a service provider.

Answer: B

Explanation:
Explanation
The action that an architect should recommend to UC is to configure the main Salesforce org as the identity provider. An identity provider is an application that authenticates users and provides information about them to service providers. A service provider is an application that provides a service to users and relies on an identity provider for authentication. SAML (Security Assertion Markup Language) is an XML-based standard that allows identity providers and service providers to exchange authentication and authorization data. SSO (Single Sign-On) is a feature that allows users to access multiple applications with one login. In this scenario, the main Salesforce org is the identity provider that authenticates users using SAML and provides information about them to the regional Salesforce orgs. The regional Salesforce orgs are the service providers that provide services to users and rely on the main Salesforce org for authentication. This way, users can access the regional Salesforce orgs from the main Salesforce org seamlessly using SSO.

NEW QUESTION # 211

Universal Containers (UC) built an integration for their employees to post, view, and vote for ideas in Salesforce from an internal Company portal. When ideas are posted in Salesforce, links to the ideas are created in the company portal pages as part of the integration process. The Company portal connects to Salesforce using OAuth. Everything is working fine, except when users click on links to existing ideas, they are always taken to the Ideas home page rather than the specific idea, after authorization. Which OAuth URL parameter can be used to retain the original requested page so that a user can be redirected correctly after OAuth authorization?

- A. Callback_uri
- B. Scope
- C. Redirect_uri
- D. State

Answer: C

Explanation:
Explanation
The redirect_uri parameter is used to specify the URL that the user should be redirected to after OAuth authorization1. The redirect_uri should match the one that was registered with the OAuth client application2.
By using the redirect_uri parameter, the user can be redirected to the original requested page instead of the Ideas home page.

NEW QUESTION # 212

......

The Salesforce Identity-and-Access-Management-Architect dumps are given regular update checks in case of any update. We make sure that candidates are not preparing for the Salesforce Identity-and-Access-Management-Architect exam from outdated and unreliable Identity-and-Access-Management-Architect study material. 2Pass4sure offers you a free demo version of the Salesforce Identity-and-Access-Management-Architect Dumps.
