CompTIA Project+ Certification Exam Sample Questions (Q247-Q252):

NEW QUESTION # 247

A company that is implementing an updated version of its main product hired a new project manager to lead the project. Prior to the start of the project, the sponsor asked the project manager to prepare a report on the defects found in the previous project to avoid a decrease in production. The report shows that the two main defects are related to cosmetic and physical damage to the product. Which of the following charts would BEST prioritize which defects to address?

- A. Run
- B. Histogram
- C. Pareto
- D. Control

Answer: C

Explanation:

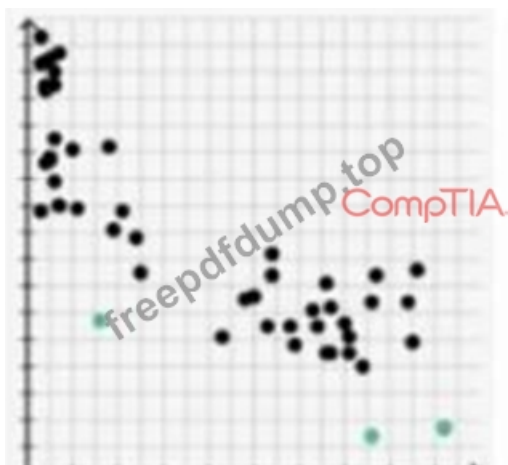

Explanation

The project manager should use a Pareto chart to prioritize which defects to address for the product. A Pareto chart is a type of bar chart that shows the frequency or impact of different causes of problems or defects. It also shows a cumulative line that represents the percentage of the total frequency or impact. A Pareto chart can help to prioritize the causes that have the most significant effect on the quality of the product and apply the

80/20 rule, which states that 80% of the problems are caused by 20% of the causes.

NEW QUESTION # 248

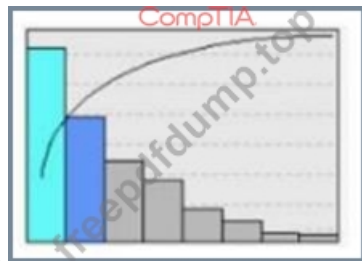

During the execution phase of a project, the project team faced an unexpected website downtime. The project manager had a brainstorming session and the team identified causes and effects for the problem. Now the project team needs to analyze and determine whether the particular cause and effect are related by using one of the following charts. Which of the following should the team use?

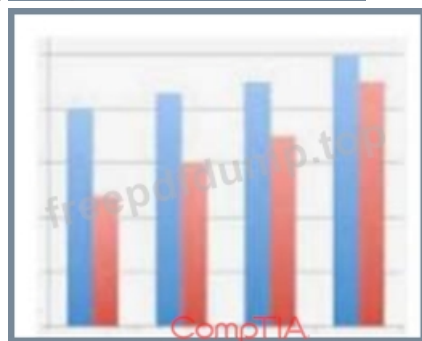

- A.

• B.

• C.

• D.

Answer: B

Explanation:

Option A shows a cause and effect diagram, also known as a fishbone diagram or an Ishikawa diagram¹. This is a tool that helps to identify and analyze the root causes of a problem by displaying the possible causes and effects in a graphical format². A cause and effect diagram can help the project team to determine whether the particular cause and effect are related by using a systematic and logical approach, such as asking "why" questions or using the 5 Whys technique^{3,4}. A cause and effect diagram is better than the other options because:

Option B shows a Gantt chart, which is a tool that helps to plan and track the tasks, dependencies, durations, and resources of a project along a timeline⁵. A Gantt chart does not focus on the causes and effects of a problem, but rather on the sequence and progress of the project activities.

Option C shows a pie chart, which is a tool that helps to compare and visualize the proportions of different categories or segments of data⁶. A pie chart does not show the relationships between the causes and effects of a problem, but rather the distribution of the data values.

Option D shows a scatter plot, which is a tool that helps to examine the correlation or association between two variables or sets of data⁷. A scatter plot does not show the causes and effects of a problem, but rather the pattern or trend of the data points.

NEW QUESTION # 249

Which of the following provides the best justification for undertaking a project?

- A. Business case
- B. Scope statement
- C. Project charter
- D. Sponsor request

Answer: A

Explanation:

A business case provides justification for undertaking a project, programme or portfolio. It evaluates the benefit, cost and risk of alternative options and provides a rationale for the preferred solution. A business case is essential for demonstrating the value of the project and securing the approval and funding from the governance. A business case is different from a scope statement, which defines the project boundaries and deliverables; a sponsor request, which initiates the project idea and seeks support; and a project charter, which authorizes the project and assigns the project manager. NEW QUESTION # 250

Which of the following best describes the reason a waterfall approach would be used for a project?

- A. The executive team wants to reduce the budget for development.
- **B. The executive team is looking to review the product only once after the product is finalized.**
- C. The executive team is expecting constant delivery of components.
- D. The executive team still has no clear requirements for the product.

Answer: B

Explanation:

The Waterfall methodology is a linear and sequential approach to project management where each phase must be completed before the next begins. It is best suited for projects with well-defined requirements and where the executive team prefers to review the product only after its completion.

As per the CompTIA Project+ PK0-005 exam objectives, under Domain 1.2: Compare and contrast Agile vs. Waterfall concepts, understanding the criteria for selecting a method, including the preference for a single final review in Waterfall, is crucial.

NEW QUESTION # 251

A project manager has decided to wait until all requirements are developed to initiate testing. Which of the following relationship dependencies is the project manager using?

- A. Finish-to-finish
- **B. Finish-to-start**
- C. Start-to-start
- D. Start-to-finish

Answer: B

Explanation:

A finish-to-start dependency is a type of relationship dependency in project management, where the start of one task depends on the finish of another task¹². In this case, the project manager is using a finish-to-start dependency, because testing cannot start until requirements development is finished. This implies that testing is a successor task, and requirements development is a predecessor task. A finish-to-start dependency is the most common type of dependency in project management, and it ensures that tasks are performed in a logical sequence³⁴.
