It's universally acknowledged that passing the exam is a good wish for all candidates, if you choose MuleSoft-Integration-Architect-I study materials of us, we can ensure you that you can pass the exam just one time. We have the professional team to search for and study the latest information for exam, therefore you can get the latest information. Furthermore, the quality and accuracy for MuleSoft-Integration-Architect-I Exam briandumps are pretty good. We also pass guarantee and money back guarantee for you fail to pass the exam. Or if you have other exam to attend, we will replace other 2 valid exam dumps for you freely.

Salesforce MuleSoft-Integration-Architect-I Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Designing for the Runtime Plane Technology Architecture: It includes analyzing Mule runtime clusters, designing solutions for CloudHub, choosing Mule runtime domains, leveraging Mule 4 class loader isolation, and understanding the reactive event processing model.
Topic 2	<ul style="list-style-type: none"> Designing Integration Solutions to Meet Reliability Requirements: It includes selecting alternatives to traditional transactions, recognizing the purpose of various scopes and strategies, differentiating disaster recovery and high availability, and using local and XA transactions.
Topic 3	<ul style="list-style-type: none"> Designing Integration Solutions to Meet Persistence Requirements: It addresses the usage of VM queues and connectors, object stores and services, and stateful components configured with object stores.
Topic 4	<ul style="list-style-type: none"> Designing Architecture Using Integration Paradigms: This topic focuses on creating high-level integration architectures using various paradigms. It includes API-led connectivity, web APIs and HTTP, event-driven APIs, and message brokers, and designing Mule application using messaging patterns and technologies.
Topic 5	<ul style="list-style-type: none"> Designing and Developing Mule Applications: It includes selecting application properties, using fundamental features, designing with core routers, understanding the Salesforce Connector, and leveraging core connectors.
Topic 6	<ul style="list-style-type: none"> Designing Integration Solutions to Meet Security Requirements: This topic emphasizes securing access to the Anypoint Platform and APIs, using Anypoint Security, counteracting security vulnerabilities, and understanding audit logging capabilities.
Topic 7	<ul style="list-style-type: none"> Initiating Integration Solutions on Anypoint Platform: Summarizing MuleSoft Catalyst and Catalyst Knowledge Hub, differentiating between functional and non-functional requirements, selecting features for designing and managing APIs, and choosing deployment options are its sub-topics.

2026 MuleSoft-Integration-Architect-I Latest Test Question | Pass-Sure MuleSoft-Integration-Architect-I: Salesforce Certified MuleSoft Integration Architect I 100% Pass

Learning at electronic devices does go against touching the actual study. Although our MuleSoft-Integration-Architect-I exam dumps have been known as one of the world's leading providers of exam materials, you may be still suspicious of the content. For your convenience, we especially provide several demos for future reference and we promise not to charge you of any fee for those downloading. Therefore, we welcome you to download to try our MuleSoft-Integration-Architect-I Exam for a small part. Then you will know whether it is suitable for you to use our MuleSoft-Integration-Architect-I test questions. There are answers and questions provided to give an explicit explanation. We are sure to be at your service if you have any downloading problems.

Salesforce Certified MuleSoft Integration Architect I Sample Questions (Q122-Q127):

NEW QUESTION # 122

What Mule application can have API policies applied by Anypoint Platform to the endpoint exposed by that Mule application?

- A. A Mule application that accepts JSON requests over TCP but is NOT required to provide a response.
- B. A Mule application that accepts JSON requests over WebSocket
- C. A Mule application that accepts gRPC requests over HTTP/2
- **D. A Mule application that accepts requests over HTTP/1x**

Answer: D

Explanation:

* HTTP/1.1 keeps all requests and responses in plain text format.

* HTTP/2 uses the binary framing layer to encapsulate all messages in binary format, while still maintaining HTTP semantics, such as verbs, methods, and headers. It came into use in 2015, and offers several methods to decrease latency, especially when dealing with mobile platforms and server-intensive graphics and videos

* Currently, Mule application can have API policies only for Mule application that accepts requests over HTTP/1x

NEW QUESTION # 123

A corporation has deployed Mule applications to different customer-hosted Mule runtimes. Mule applications deployed to these Mule runtimes are managed by Anypoint Platform.

What needs to be installed or configured (if anything) to monitor these Mule applications from Anypoint Monitoring, and how is monitoring data from each Mule application sent to Anypoint Monitoring?

- A. Enable monitoring of individual Mule applications from the Runtime Manager application settings. Runtime Manager sends monitoring data to Anypoint Monitoring for each deployed Mule application.
- **B. Install an Anypoint Monitoring agent on each Mule runtime. Each Anypoint Monitoring agent sends monitoring data from the Mule applications running in its Mule runtime to Anypoint Monitoring.**
- C. Leave the out-of-the-box Anypoint Monitoring agent unchanged in its default Mule runtime installation. Each Anypoint Monitoring agent sends monitoring data from the Mule applications running in its Mule runtime to Runtime Manager, then Runtime Manager sends monitoring data to Anypoint Monitoring.
- D. Install a Runtime Manager agent on each Mule runtime. Each Runtime Manager agent sends monitoring data from the Mule applications running in its Mule runtime to Runtime Manager, then Runtime Manager sends monitoring data to Anypoint Monitoring.

Answer: B

Explanation:

To monitor Mule applications deployed to different customer-hosted Mule runtimes using Anypoint Monitoring, follow these steps:

* Install Anypoint Monitoring Agent: Install an Anypoint Monitoring agent on each Mule runtime. This agent is responsible for collecting monitoring data from the Mule applications running on that runtime.

* Data Transmission: Each Anypoint Monitoring agent sends the collected monitoring data directly to Anypoint Monitoring. This ensures that performance metrics, logs, and other relevant data are available for analysis and monitoring within the Anypoint Platform.

By using the Anypoint Monitoring agent, organizations can effectively monitor their Mule applications across various environments, ensuring visibility and operational efficiency.

* MuleSoft Documentation on Anypoint Monitoring

* Installing and Configuring Anypoint Monitoring Agent

NEW QUESTION # 124

In Anypoint Platform, a company wants to configure multiple identity providers (Idps) for various lines of business (LOBs). Multiple business groups and environments have been defined for these LOBs. What Anypoint Platform feature can use multiple Idps to access the company's business groups and environment?

- A. User management
- **B. Client Management**
- C. Dedicated load balancers
- D. Roles and permissions

Answer: B

Explanation:

Correct answer is Client Management

* Anypoint Platform acts as a client provider by default, but you can also configure external client providers to authorize client applications.

* As an API owner, you can apply an OAuth 2.0 policy to authorize client applications that try to access your API. You need an OAuth 2.0 provider to use an OAuth 2.0 policy.

* You can configure more than one client provider and associate the client providers with different environments. If you configure multiple client providers after you have already created environments, you can associate the new client providers with the environment.

* You should review the existing client configuration before reassigning client providers to avoid any downtime with existing assets or APIs.

* When you delete a client provider from your master organization, the client provider is no longer available in environments that used it.

* Also, assets or APIs that used the client provider can no longer authorize users who want to access them.

NEW QUESTION # 125

A mule application is being designed to perform product orchestration. The Mule application needs to join together the responses from an inventory API and a Product Sales History API with the least latency.

To minimize the overall latency, what is the most idiomatic (used for its intended purpose) design to call each API request in the Mule application?

- **A. Call each API request in a separate route of a Scatter-Gather**
- B. Call each API request in a separate route of a Parallel For Each scope
- C. Call each API request in a separate Async scope
- D. Call each API request in a separate lookup call from Dataweave reduce operator

Answer: A

Explanation:

Scatter-Gather sends a request message to multiple targets concurrently. It collects the responses from all routes, and aggregates them into a single message.

Reference: <https://docs.mulesoft.com/mule-runtime/4.3/scatter-gather-concept>

NEW QUESTION # 126

A travel company wants to publish a well-defined booking service API to be shared with its business partners. These business partners have agreed to ONLY consume SOAP services and they want to get the service contracts in an easily consumable way before they start any development. The travel company will publish the initial design documents to Anypoint Exchange, then share those documents with the business partners. When using an API-led approach, what is the first design document the travel company should deliver to its business partners?

- A. Create a SOAP API specification in Design Center
- B. Create a RAML API specification using any text editor
- C. Create an OAS API specification in Design Center
- **D. Create a WSDL specification using any XML editor**

Answer: D

Explanation:

SOAP API specifications are provided as WSDL. Design center doesn't provide the functionality to create WSDL file. Hence WSDL needs to be created using XML editor

NEW QUESTION # 127

.....

The data for our MuleSoft-Integration-Architect-I practice materials that come up with our customers who have bought our MuleSoft-Integration-Architect-I actual exam and provided their scores show that our high pass rate is 98% to 100%. This is hard to find and compare with in the market. And numerous enthusiastic feedbacks from our worthy clients give high praises not only on our MuleSoft-Integration-Architect-I Study Guide, but also on our sincere and helpful 24 hours customer services online. You will feel grateful to choose our MuleSoft-Integration-Architect-I learning quiz!
