NEW QUESTION # 40

After creating a new machine catalog using the Machine Creation Services (MCS) wizard in Citrix Studio, a Citrix Administrator determines that Windows activation fails for all new machines in that catalog.

Which two conditions can cause this to happen? (Choose two.)

- A. The version of Windows installed uses Multiple Activation Key (MAK) licensing.
- B. The base image rearm count has been exceeded.
- C. The Microsoft License Server is unreachable.
- D. The version of Windows installed is Windows Server 2012 R2.

Answer: A,B

Explanation:

When using MCS to create machines, each machine is activated using the Microsoft Key Management Service (KMS) or Multiple Activation Key (MAK) licensing¹. The base image that is used to create the machines must be rearmed before capturing it, and the rearm count must not be exceeded². If the base image rearm count has been exceeded, the machines created from that image will not be activated. Similarly, if the version of Windows installed on the base image uses MAK licensing, the machines created from that image will not be activated, because MAK licensing is not supported by MCS³.
