Fortinet FCSS - FortiSASE 25 Administrator Sample Questions (Q47-Q52):

NEW QUESTION # 47

Which service is included in a secure access service edge (SASE) solution, but not in a security service edge (SSE) solution?

- A. SWG
- B. ZTNA
- C. SD-WAN
- D. CASB

Answer: C

Explanation:

SD-WAN is a networking component included in a SASE solution but not in an SSE solution. SSE focuses solely on security services (like ZTNA, SWG, and CASB), while SASE combines both networking (e.g., SD-WAN) and security into a unified cloud-delivered service.

NEW QUESTION # 48

What are two advantages of using zero-trust tags? (Choose two.)

- A. Zero-trust tags can be used to allow secure web gateway (SWG) access
- B. Zero-trust tags can determine the security posture of an endpoint.
- C. Zero-trust tags can be used to allow or deny access to network resources
- D. Zero-trust tags can be used to create multiple endpoint profiles which can be applied to different endpoints

Answer: B,C

Explanation:

Zero-trust tags are critical in implementing zero-trust network access (ZTNA) policies. Here are the two key advantages of using zero-trust tags:

Access Control (Allow or Deny):

Zero-trust tags can be used to define policies that either allow or deny access to specific network resources based on the tag associated with the user or device.

This granular control ensures that only authorized users or devices with the appropriate tags can access sensitive resources, thereby enhancing security.

Determining Security Posture:

Zero-trust tags can be utilized to assess and determine the security posture of an endpoint.

Based on the assigned tags, FortiSASE can evaluate the device's compliance with security policies, such as antivirus status, patch levels, and configuration settings.

Devices that do not meet the required security posture can be restricted from accessing the network or given limited access.

FortiOS 7.2 Administration Guide: Provides detailed information on configuring and using zero-trust tags for access control and security posture assessment.

FortiSASE 23.2 Documentation: Explains how zero-trust tags are implemented and used within the FortiSASE environment for enhancing security and compliance.

NEW QUESTION # 49

Refer to the exhibit.

□ In the user connection monitor, the FortiSASE administrator notices the user name is showing random characters. Which configuration change must the administrator make to get proper user information?

- A. Add more endpoint licenses on FortiSASE.
- B. Turn off log anonymization on FortiSASE.
- C. Configure the username using FortiSASE naming convention.
- D. Change the deployment type from SWG to VPN.

Answer: B

Explanation:

In the user connection monitor, the random characters shown for the username indicate that log anonymization is enabled. Log anonymization is a feature that hides the actual user information in the logs for privacy and security reasons. To display proper user information, you need to disable log anonymization.

Log Anonymization:

When log anonymization is turned on, the actual usernames are replaced with random characters to protect user privacy.

This feature can be beneficial in certain environments but can cause issues when detailed user monitoring is required.

Disabling Log Anonymization:

Navigate to the FortiSASE settings.

Locate the log settings section.

Disable the log anonymization feature to ensure that actual usernames are displayed in the logs and user connection monitors.

FortiSASE 23.2 Documentation: Provides detailed steps on enabling and disabling log anonymization.

Fortinet Knowledge Base: Explains the impact of log anonymization on user monitoring and logging.

NEW QUESTION # 50

Which secure internet access (SIA) use case minimizes individual endpoint configuration?

- A. Site-based remote user internet access
- B. Agentless remote user internet access
- C. SIA for FortiClient agent remote users
- D. SIA using ZTNA

Answer: A

Explanation:

Site-based remote user internet access minimizes individual endpoint configuration by routing user traffic through a centralized FortiSASE connection point (such as a FortiAP or FortiGate), rather than requiring each device to be individually configured with the FortiClient agent.

NEW QUESTION # 51

You are designing a new network for Company X and one of the new cybersecurity policy requirements is that all remote user endpoints must always be connected and protected Which FortiSASE component facilitates this always-on security measure?

- A. thin-branch SASE extension
- B. site-based deployment
- C. inline-CASB
- D. unified FortiClient

Answer: D

Explanation:

The unified FortiClient component of FortiSASE facilitates the always-on security measure required for ensuring that all remote user endpoints are always connected and protected.

Unified FortiClient:

FortiClient is a comprehensive endpoint security solution that integrates with FortiSASE to provide continuous protection for remote user endpoints.

It ensures that endpoints are always connected to the FortiSASE infrastructure, even when users are off the corporate network.

Always-On Security:

The unified FortiClient maintains a persistent connection to FortiSASE, enforcing security policies and protecting endpoints against threats at all times.

This ensures compliance with the cybersecurity policy requiring constant connectivity and protection for remote users.

FortiOS 7.2 Administration Guide: Provides information on configuring and managing FortiClient for endpoint security.

FortiSASE 23.2 Documentation: Explains how FortiClient integrates with FortiSASE to deliver always-on security for remote endpoints.
