But our company can provide the anecdote for you--our 220-1201 study materials. Under the guidance of our 220-1201 exam practice, you can definitely pass the exam as well as getting the related certification with the minimum time and efforts. We would like to extend our sincere appreciation for you to browse our website, and we will never let you down. The advantages of our 220-1201 Guide materials are more than you can imagine. Just rush to buy our 220-1201 practice braindumps!

CompTIA A+ Certification Exam: Core 1 Sample Questions (Q237-Q242):

NEW QUESTION # 237

A user connects their laptop to a projector in a conference room. Once connected, the user reports the screen is smaller at the bottom than at the top. The user tries restarting the laptop and then disconnecting and reconnecting the cable to the projector. Which of the following should a technician do to resolve the issue?

- A. Replace the HDMI cable.
- B. Adjust the keystone
- C. Power cycle the projector.
- D. Increase the resolution.

Answer: B

Explanation:

A distorted image where the screen is not symmetrical (wider at the top or bottom) is typically due to keystone distortion. Adjusting the projector's keystone settings corrects this trapezoidal effect caused by an angled projection.
Reference: "CompTIA A+ Complete Study Guide" by Quentin Docter - Chapter 3, page 152.

NEW QUESTION # 238

A user prints a job from a laser printer. The user wipes the page, and the words and images come off of it. The technician replaces the toner cartridge, but the issue persists. Which of the following components should the technician replace next?

- A. Drum
- B. Discharge lamp
- C. Fuser
- D. Developer roller

Answer: C

Explanation:

In laser printers, the fuser unit is responsible for melting the toner onto the paper using heat and pressure. If the toner rubs off easily, it's a clear sign the fuser is failing or not heating properly.

Replacing the fuser will ensure the toner bonds correctly to the paper.

NEW QUESTION # 239

A technician sets up secure print and configures an NFC device that will authenticate users for access. Which of the following will the NFC device most likely use to authenticate?

- A. Biometrics
- B. Passcode
- C. Badging
- D. Password

Answer: C

Explanation:

Badging refers to the use of NFC-enabled ID badges or cards that authenticate users when tapped against a reader for secure print or access control.

From CompTIA A+ 220-1101 Official Study Guide, Objective 3.4 - Secure printing and authentication:

"NFC authentication is commonly implemented using employee badges, allowing secure and convenient access to devices and functions." Verified Source:

CompTIA A+ Core 1 (220-1101) Official Study Guide, Chapter 3: Secure Print Solutions CompTIA Exam Objectives 220-1101, Domain 3.4

NEW QUESTION # 240

Which of the following cloud models allows customers to connect to company resources from their laptops with the least amount of infrastructure?

- A. PaaS
- B. IaaS
- C. SaaS
- D. FaaS

Answer: C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

SaaS (Software as a Service) is a cloud model that allows users to access applications over the Internet without managing the infrastructure or platform. Users can log in via a browser or app on any device, such as a laptop, with minimal configuration required.

Reference: CompTIA A+ Core 1 220-1201 Official Study Guide, Section: Virtualization and Cloud Computing Concepts SaaS provides "ready-to-use" applications and is ideal for organizations looking to minimize local infrastructure needs.

NEW QUESTION # 241

A user replaces their PC power supply and connects it to the components, but the PC fails to start. What is the most likely cause?

- A. The PSU only works in redundant setups
- **B. The 4-pin CPU power connector is not connected**
- C. The wattage is insufficient
- D. The computer requires additional RAM

Answer: B

Explanation:

Modern motherboards require both the 24-pin ATX connector and a 4-pin or 8-pin CPU power connector. If the CPU power connector is not attached, the motherboard will receive power but the system will not boot. CompTIA A+ specifically lists this as a common mistake after replacing a power supply.

Insufficient wattage may cause instability, but usually the system still attempts to start. RAM does not prevent power-on if missing; instead, the system produces beep codes. Redundant PSUs are used in servers, not standard desktops.

Therefore, the missing CPU power connector is the most likely cause, and this scenario reflects typical troubleshooting steps outlined in A+ hardware diagnostics.

NEW QUESTION # 242

.....

You may strand on some issues at sometimes, all confusions will be answered by the bountiful contents of our 220-1201 exam materials. Wrong choices may engender wrong feed-backs, we are sure you will come a long way by our 220-1201 practice questions. In fact, a lot of our loyal customers have became our friends and only rely on our 220-1201 study braindumps. As they always said that our 220-1201 learning quiz is guaranteed to help them pass the exam
