Mule-Dev-202 Test Torrent - Mule-Dev-202 Reliable Dump

Our company is a professional certificate study materials provider. We have occupied in this field for years, we are in the leading position of providing exam materials. Mule-Dev-202 training materials of us is high-quality and accurate, for we have a profession team to verify and update the Mule-Dev-202 answers and questions. We have received many good feedbacks from our customers for helping pass the exam successfully. Furthermore, we provide you free update for one year after purchasing Mule-Dev-202 exam dumps from us.

Salesforce Certified MuleSoft Hyperautomation Developer Sample Questions (Q36-Q41):

NEW QUESTION # 36

An employee at AnyAirlines uses RPA Recorder to capture actions performed when carrying out a business process automation. How does this help expedite RPA process development?

- A. BPMN is autogenerated, including documentation in the form of images and a fully functional RPA process with workflows and conditional branching.
- B. BPMN is autogenerated with complete test plans and run configurations that can be executed in the test and production phases.
- **C. BPMN is autogenerated, which includes documentation in the form of images and a complete recording of keyboard actions and wait times.**
- D. BPMN is autogenerated with documentation and workflows containing the recorded actions that are automatically created during the build phase.

Answer: C

Explanation:

Using RPA Recorder to capture actions performed during a business process automation helps expedite RPA process development in the following way:

Autogenerating BPMN:

The RPA Recorder captures the business process as it is performed and autogenerates a Business Process Model and Notation (BPMN) diagram. This diagram includes a visual representation of the process, making it easier to understand and modify.

Detailed Documentation:

Along with the BPMN, the recorder generates detailed documentation that includes images of the steps performed, as well as a complete recording of keyboard actions and wait times. This provides a comprehensive view of the process, which can be reviewed and refined.

Expediting Development:

By automating the creation of BPMN and detailed documentation, the RPA Recorder significantly reduces the time required to document and design the RPA process manually. This allows developers to focus on refining and optimizing the process rather than starting from scratch.

NEW QUESTION # 37

Which component of Anypoint Platform is responsible for enforcing API policies?

- A. API Manager
- B. API Analytics
- **C. API Gateway**
- D. API Runtime

Answer: C

Explanation:

The component of Anypoint Platform responsible for enforcing API policies is the API Gateway.

API Gateway:

The API Gateway is a runtime component that enforces policies applied to APIs. It acts as an intermediary that manages API traffic, security, and performance by applying the policies configured in API Manager.

Policies such as rate limiting, security, transformation, and monitoring are enforced at the API Gateway to ensure that APIs are accessed securely and efficiently.

NEW QUESTION # 38

For a MuleSoft Composer flow, errors can be noted in its Flow Details page.

What other way can MuleSoft Composer send notifications when errors occur?

- **A. It sends a notification to the configured email address.**
- B. It sends a message to a configured Slack channel.
- C. It generates a notification in the flow.

- D. It posts to a configured Chatter profile.

Answer: A

Explanation:

MuleSoft Composer provides a way to handle errors and notify users when something goes wrong in a flow.

Aside from viewing errors on the Flow Details page, MuleSoft Composer can also send notifications to alert users about the errors.

Flow Error Handling: When an error occurs in a MuleSoft Composer flow, the error is logged and visible on the Flow Details page.

Email Notifications: MuleSoft Composer can be configured to send notifications to a specified email address.

This allows users to be promptly informed of any issues without having to constantly monitor the Flow Details page.

Configuration: This can be set up in the MuleSoft Composer settings, where an email address can be configured to receive these notifications.

MuleSoft Composer Error Notifications

NEW QUESTION # 39

An RPA process is invoked by a MuleSoft Composer flow. The RPA process has a User Task that can take up to 24 hours to complete.

- A. Using best practices, how should the results be consumed by MuleSoft Composer?
- **B. Create a second MuleSoft Composer flow that starts when the RPA process is complete.**
- C. Wait for the RPA process to complete and use the results in the same MuleSoft Composer flow.
- D. Create a second MuleSoft Composer flow that runs on a schedule and checks if the RPA process is complete.
- E. Wait for the RPA process to complete and invoke a second MuleSoft Composer flow via REST API.

Answer: B

Explanation:

When an RPA process involves a User Task that can take a significant amount of time (up to 24 hours) to complete, it is best to use a follow-up mechanism to handle the results once the process is finished:

Second MuleSoft Composer Flow:

Create a second MuleSoft Composer flow that is triggered when the RPA process completes. This ensures that the first flow is not held up while waiting for the long-running RPA process to finish.

The second flow can start based on an event, such as the completion status of the RPA process, ensuring timely and efficient processing of the results.

Trigger Mechanism:

Configure the RPA process to notify MuleSoft Composer when it is complete, possibly using a REST API or another integration method.

Best Practices:

This approach adheres to best practices by keeping flows modular and focused on specific tasks, making them easier to manage and troubleshoot.

NEW QUESTION # 40

Which type of integration project should be implemented with MuleSoft Composer?

- **A. Data transformation from a source system to a target system by a non-technical user**
- B. Automating UI interactions using image recognition
- C. Long running workflows that require manual steps and approvals by users
- D. Batch processing of larger-than-memory files with conditional logic within the batch steps

Answer: A

Explanation:

MuleSoft Composer is designed for business users to create integrations without deep technical knowledge. It is ideal for scenarios that involve:

Data Transformation and Integration:

Non-technical users can easily connect different systems, automate data transfers, and transform data from one system to another

using a no-code interface.

MuleSoft Composer provides pre-built connectors and an intuitive interface to set up these integrations.

Simplified Automation:

The platform is optimized for creating straightforward, rule-based automations where complex coding is not required.

Therefore, automating data transformation tasks by a non-technical user fits perfectly with MuleSoft Composer's capabilities.
