How to Get Success in Supermicro SDLCSA Exam With Flying Colors?

The pass rate is 98.75%, and we will ensure you pass the exam if you buy SDLCSA exam torrent from us. Since the high pass rate, we have received many good feedbacks from candidates. What's more, we pass guarantee and money back guarantee if you fail to

pass the exam after purchasing SDLCSA Exam Torrent from us. We have online and offline chat service stuff, and they possess the professional knowledge about the SDLCSA exam dumps, if you have any questions, just have a chat with them.

Supermicro Direct Liquid Cooling Service Associate (SDLCSA) Exam Sample Questions (Q31-Q36):

NEW QUESTION # 31

What safety feature prevents the motherboard tray from being removed too quickly and potentially dropped?

- **A. A safety latch**
- B. A safety cable
- C. A safety switch
- D. A safety pin

Answer: A

Explanation:

In Supermicro servers like the SYS-421GE-TNHR2-LCC, the motherboard tray is a critical component, often heavy with CPUs and DLC cold plates. A safety latch is the standard feature to prevent rapid removal and accidental drops, as seen in manuals (e.g., SYS-420GP-TNAR). Latches on both sides must be released deliberately, ensuring controlled extraction. A cable (A) might tether but not prevent speed, a switch (B) controls electronics, and a pin (D) is less common for trays. Supermicro's DLC systems prioritize safe handling, making C the correct safety mechanism.

NEW QUESTION # 32

To remove an AOC NIC card, simply pull the card straight up. True or False.

- A. True
- **B. False**

Answer: B

Explanation:

Removing an AOC NIC card in Supermicro systems like the SYS-421GE-TNHR2-LCC requires more than pulling straight up. Per standard procedures (e.g., SYS-420GP-TNAR), you must first unscrew the card from its bracket (1 screw) and release any retaining mechanisms (e.g., PCIe slot latch). Simply pulling risks damage to the card or slot, especially in DLC setups with dense configurations. False (B) reflects Supermicro's emphasis on careful hardware handling, making it the correct answer. References: Supermicro AOC card removal guides, DLC system component safety.

NEW QUESTION # 33

How do you know when the DIMM has been properly inserted back into the slot?

- A. You shouldn't hear a click after you've pressed the DIMM down into the slot
- **B. You should hear a click after you've pressed the DIMM down into the slot**
- C. You should still be able to wiggle the DIMM after you've pressed the DIMM down into the slot
- D. You should see a green lit button on the DIMM

Answer: B

Explanation:

When inserting a DIMM in Supermicro systems, proper seating is confirmed by a click as the slot latches snap into place, securing the module (e.g., SYS-420GP-TNAR manuals). This audible feedback is standard in DLC systems for reliable memory installation. B (green button) isn't a feature, C contradicts correct insertion, and D (wiggling) indicates failure. Supermicro's design ensures firm DIMM placement, making A the verified sign. References: Supermicro DIMM installation guides, DLC system component reliability.

NEW QUESTION # 34

What are the full steps and proper order for removing the LPIO board from the PCIe tray?

- A. Remove PCIe air shroud > Remove all AOC NIC cards > Remove metal bracket holding down LPIO board
- B. Remove GPU > Remove metal bracket holding down LPIO board > Remove 3 or 4 AOC NIC cards
- C. Remove metal bracket holding down LPIO board > Remove PCIe air shroud > Remove internal fans
- D. Remove a few AOC NIC cards > Remove PCIe tray > Remove motherboard tray

Answer: A

Explanation:

Removing the LPIO (Low-Profile IO) board from the PCIe tray in the SYS-421GE-TNHR2-LCC involves:

- * Remove PCIe air shroud: Clears access to components (standard in Supermicro designs).
- * Remove all AOC NIC cards: Disconnects cards on the LPIO board for unobstructed removal.
- * Remove metal bracket holding down LPIO board: Unscrews (typically 2 screws) the bracket securing the board. Option B follows Supermicro's logical service order (e.g., SYS-420GP-TNAR), ensuring safe access in DLC systems. A (GPU) is unrelated, C (tray removals) is excessive, and D (fans) is irrelevant. B aligns with Supermicro's DLC modularity, making it correct. References: Supermicro PCIe tray service guides, DLC system IO removal protocols.

NEW QUESTION # 35

In order to remove the AOM cage, best describe the location of the 4 screws that need to be removed.

- A. 2 screws on the top, 2 screws on the side
- B. 4 screws on the top, 0 screws on the side
- C. 3 screws on the side, 1 screw on the top
- D. 3 screws on the top, 1 screw on the side

Answer: A

Explanation:

The AOM (Add-On Module) cage in the SYS-421GE-TNHR2-LCC is secured with 2 screws on the top and 2 on the side, a balanced approach in Supermicro's modular designs (e.g., SYS-420GP-TNAR). This ensures stability and accessibility in DLC systems. A and B skew placement, while C (all top) ignores side support. D matches Supermicro's chassis engineering, making it correct. References: Supermicro AOM cage specs, DLC system structural design.
