CCCS-203b Boot Camp - CCCS-203b Dumps Discount

One year free update for CrowdStrike CCCS-203b is available for all of you after your purchase. Dumpexams CCCS-203b pdf download dumps have helped most IT candidates get their CCCS-203b certification. The high quality and best valid CCCS-203b dumps vce have been the best choice for your preparation. You just need to take 20-30 hours to study and prepare, then you can attend your CCCS-203b Actual Test with ease. 100% success is the guarantee of CCCS-203b pdf study material.

The empty promise is not enough. So our Dumpexams provides to all customers with the most comprehensive service of the highest quality including the free trial of CCCS-203b software before you buy, and the one-year free update after purchase. We will be with you in every stage of your CCCS-203b Exam Preparation to give you the most reliable help. Even if you still failed the CCCS-203b certification exam, we will full refund to reduce your economic loss as much as possible.

Pass Guaranteed Valid CrowdStrike - CCCS-203b Boot Camp

People need to increase their level by getting the CrowdStrike CCCS-203b certification. If you take an example of the present scenario in this competitive world, you will find people struggling to meet their ends just because they are surviving on low-scale salaries. Even if they are thinking about changing their jobs, people who are ready with a better skill set or have prepared themselves with CrowdStrike CCCS-203b Certification grab the chance. This leaves them in the same place where they were.

CrowdStrike CCCS-203b Exam Syllabus Topics:

Topic	Details
Topic 1	• Remediating and Reporting Issues: This domain addresses identifying remediation steps for findings, using scheduled reports for cloud security, and utilizing Falcon Fusion SOAR workflows for automated notifications.
Topic 2	• Runtime Protection: This domain focuses on selecting appropriate Falcon sensors for Kubernetes environments, troubleshooting deployments, and identifying misconfigurations, unassessed images, IOAs, rogue containers, drift, and network connections.
Topic 3	• Falcon Cloud Security Features and Services: This domain covers understanding CrowdStrike's cloud security products (CSPM, CWP, ASPM, DSPM, IaC security) and their integration, plus one-click sensor deployment and Kubernetes admission controller capabilities.
Topic 4	• Cloud Account Registration: This domain focuses on selecting secure registration methods for cloud environments, understanding required roles, organizing resources into cloud groups, configuring scan exclusions, and troubleshooting registration issues.

CrowdStrike Certified Cloud Specialist Sample Questions (Q179-Q184):

NEW QUESTION # 179
Which feature of Falcon Horizon allows users to identify exposed cloud services and workloads running without requiring the deployment of a Falcon sensor?

- A. Vulnerability patching orchestration
- B. Deployment of lightweight monitoring agents
- C. Real-time behavioral monitoring
- D. API-driven cloud workload discovery

Answer: D

Explanation:
Option A: Patching orchestration is not part of Falcon Horizon's functionality. It focuses on remediation rather than workload discovery or runtime protection.
Option B: While lightweight monitoring agents can provide visibility, this contradicts the requirement of finding workloads without deploying a Falcon sensor. Falcon Horizon's agentless approach eliminates this dependency.
Option C: Real-time behavioral monitoring is a feature of Falcon modules like Falcon Prevent or Falcon Insight, which require sensors to monitor and analyze workload behavior. This is not applicable to environments without sensor deployment.
Option D: Falcon Horizon uses API-driven cloud workload discovery to analyze the state of resources in the cloud environment. By leveraging APIs provided by cloud service providers, Falcon Horizon gathers data on running workloads, exposed services, and misconfigurations without needing to deploy agents or sensors on individual workloads. This approach is efficient and does not require intrusive installation processes.

NEW QUESTION # 180
Which of the following actions can be included in a custom Falcon Fusion workflow to notify individuals about a cloud-related detection?

- A. Send an email notification
- B. Automatically deploy a remediation script to affected cloud instances
- C. Post a message in a public Falcon Community forum
- D. Update a third-party ticketing system via webhook

Answer: A

Explanation:
Option A: While this action is technically possible using Falcon Fusion, it does not involve direct notification to individuals. Instead, it updates an external system, such as a ticketing tool like Jira or ServiceNow. This action complements notifications but does not replace them.
Option B: While Falcon Fusion workflows can trigger certain automated actions, deploying remediation scripts directly to cloud instances would fall outside its primary scope. Falcon Fusion focuses on notification and orchestration, not executing scripts on instances directly. Users can integrate remediation via third-party tools connected to the workflow.
Option C: Falcon Fusion workflows support the ability to send email notifications as part of custom workflows. This is particularly useful for notifying individuals or teams about specific cloud-related detections, such as potential security breaches or compliance violations. Email notifications are configurable and allow for timely communication.
Option D: Falcon Fusion workflows are designed for private, secure notifications within the organization or integrated systems. Posting in a public forum would not align with security and confidentiality best practices.

NEW QUESTION # 181
Which of the following is the correct step when setting up an automated assessment schedule for Cloud Security Posture Management (CSPM) in CrowdStrike?

- A. Manually initiate security posture assessments each time a review is required.
- B. Define a schedule in the CrowdStrike console, specifying the frequency and cloud account scope.
- C. Use the CrowdStrike API to trigger one-time scans only when issues are suspected.
- D. Enable default cloud provider security tools and assume CrowdStrike will synchronize automatically.

Answer: B

Explanation:

Option A: Using the CrowdStrike API to trigger one-time scans can supplement assessments but is not a replacement for an automated schedule. Without regular scans, potential vulnerabilities may go unnoticed, reducing overall security efficacy.
Option B: Manually initiating security posture assessments each time is inefficient and prone to human error. CSPM tools like CrowdStrike support automated scheduling to ensure consistent monitoring and compliance without manual intervention.
Option C: While enabling default cloud provider security tools is a good practice, these tools are separate from CrowdStrike's CSPM capabilities. Assuming synchronization without explicitly setting up a schedule in CrowdStrike will leave the assessments incomplete.
Option D: Defining a schedule in the CrowdStrike console is the correct approach. The console provides options to set frequency (e.g., daily, weekly) and scope (e.g., specific cloud accounts or all accounts), ensuring continuous posture monitoring. This setup is foundational for proactive security management.

NEW QUESTION # 182
Your organization wants to use Falcon Fusion to notify individuals about policy violations related to unapproved container images in your cloud environment.
Which action type should you configure to send notifications to the cloud operations team?

- A. Log to Console
- B. Execute a Remediation Script
- C. Send Email
- D. Send to a Webhook

Answer: C

Explanation:
Option A: Logging to the console captures the event for internal monitoring but does not serve as an external notification mechanism for individuals or teams.
Option B: While remediation scripts are useful for automating fixes or responses to policy violations, they do not provide direct notification to individuals. This option is more suitable for technical remediation tasks than communication.
Option C: Sending data to a webhook can integrate Falcon Fusion with third-party systems for notification, but it requires additional setup and might not notify individuals directly unless configured to forward information to a communication platform like Slack or Teams.
Option D: "Send Email" is the correct action type to notify individuals about policy violations directly. This option allows you to send detailed notifications to specific individuals or groups, ensuring they are promptly informed about the violations. Notifications can include context like policy details, detection metadata, and recommended actions.

NEW QUESTION # 183
What is the primary purpose of the Image Assessment report in CrowdStrike's cloud security platform?

- A. Detecting malware in container images.
- B. Identifying potential high-severity vulnerabilities, leaked secrets, and misconfigurations.
- C. Highlighting outdated software versions in containers.
- D. Removing unauthorized images from the repository.

Answer: B

Explanation:
Option A: The Image Assessment report is designed to provide a comprehensive evaluation of container images to identify security risks such as malware, CVEs, misconfigurations in Docker files, and leaked secrets. This detailed report helps security teams proactively address issues before deploying the containers.
Option B: While outdated software may contribute to vulnerabilities, the Image Assessment report focuses on known vulnerabilities (CVEs) rather than simply reporting software age or version.
Option C: Image removal is not a function of the Image Assessment report. Image repository management is typically handled through access policies and repository-specific tools.
Option D: While detecting malware is a feature of the Image Assessment report, it is not the primary purpose. Malware detection is part of the broader assessment that includes CVEs, misconfigurations, and secrets.

NEW QUESTION # 184

.....

Our CCCS-203b practice exam simulator mirrors the CCCS-203b exam experience, so you know what to anticipate on CCCS-203b exam day. Our CrowdStrike CCCS-203b features various question styles and levels, so you can customize your CCCS-203b exam questions preparation to meet your needs.
