ServiceNow Certified Implementation Specialist - Strategic Portfolio Management Sample Questions (Q63-Q68):

NEW QUESTION # 63

If a user creates a new demand from the demand workbench, what state will the system save the record in?

- A. approved
- B. open
- C. draft
- D. qualified

Answer: D

Explanation:

According to the Using the Demand Workbench document, if a user creates a new demand from the demand workbench, the system saves the record in the qualified state and displays it on the bubble chart. The other options are not correct, as they are not the default state for a new demand created from the demand workbench. The approved state is the final state for a demand that has passed all the assessments. The open state is the initial state for a demand that is created from the Service Catalog. The draft state is the state for a demand that is created from the Demand form.

NEW QUESTION # 64

Where do you define 'Roles' requested via resource plans?

- **A. Resource roles under resource management.**
- B. No need to define it differently, they are same as system roles.
- C. Under skill management modules.
- D. Roles under system security.

Answer: A

Explanation:

According to the Assigning Resource Roles document, you define 'Roles' requested via resource plans under resource roles in the Resource Management application. Resource roles are the roles that users can request or allocate for resource plans. The other options are not correct, as they are not the places where you define 'Roles' requested via resource plans. The system roles are the roles that grant access to various applications and modules in the system. The roles under system security are the roles that control the security settings and permissions for the system. The skill management modules are the modules that manage the skills and skill levels of users and groups.

NEW QUESTION # 65

Using the Request type field on a resource plan, which options can be used to request a resource?

Choose 3 answers

- **A. Person Days**
- **B. FTE**
- C. Day
- D. Month
- **E. Hours**

Answer: A,B,E

Explanation:

Using the Request type field on a resource plan, you can request a resource by specifying the amount of FTE, person days, or hours that you need for a task or a project. FTE stands for full-time equivalent and represents the percentage of a standard work week that a resource can perform. Person days are the number of days that a resource works on a task or a project. Hours are the number of hours that a resource works on a task or a project. You can find more information about the Request type field in the Product Documentation for ServiceNow.

NEW QUESTION # 66

Which is the minimum role that has access to the Project Administration > Settings > Preferences-Project module?

- **A. it_pps_admin**
- B. it_program_manager
- C. sys_admin
- D. it_project_manager

Answer: A

Explanation:

According to the ServiceNow documentation¹, the it_pps_admin role is the minimum role that has access to the Project Administration > Settings > Preferences-Project module. This role can configure the project preferences, such as the default project template, the default project currency, and the default project status. The other options are incorrect because:

A. it_program_manager: The it_program_manager role can create and manage programs, but not project preferences².

B. sys_admin: The sys_admin role can access all modules and features on the platform, but it is not the minimum role required for the Project Administration > Settings > Preferences-Project module³.

C. it_project_manager: The it_project_manager role can create and manage projects, but not project preferences⁴.

NEW QUESTION # 67

Which of the following can be used to calculate planned cost when creating a resource plan?

Choose 2 answers

- A. Demand rate
- B. Default rate
- C. Project rate
- D. Rate card

Answer: C,D

Explanation:

According to the ServiceNow documentation¹, a rate card is a table that defines the hourly cost of labor for different roles or resources. A project rate is a fixed rate that is applied to all resources assigned to a project, regardless of their roles or individual rates. Both of these can be used to calculate the planned cost of a resource plan by multiplying the hours allocated to each resource by the corresponding rate. The other options are incorrect because:

A . Demand rate: A demand rate is a rate that is applied to a demand, not a resource plan. It is used to estimate the cost of fulfilling a demand before it is converted into a project².

C . Default rate: A default rate is a rate that is applied to a resource when no other rate is specified. It is not a valid option for calculating the planned cost of a resource plan, as it is only used as a fallback option³.

1: https://docs.servicenow.com/bundle/vancouver-it-business-management/page/product/resource-management/concept/c_RateCards.html 2: https://docs.servicenow.com/bundle/vancouver-it-business-management/page/product/demand-management/concept/c_DemandRate.html 3: https://docs.servicenow.com/bundle/vancouver-it-business-management/page/product/resource-management/concept/c_DefaultRate.html
