## Cybersecurity-Practitioner exam dumps

This is a Palo Alto Networks Cybersecurity-Practitioner practice exam software for Windows computers. This Cybersecurity-Practitioner practice test will be similar to the actual Palo Alto Networks Cybersecurity Practitioner (Cybersecurity-Practitioner) exam. If user wish to test the Palo Alto Networks Cybersecurity-Practitioner study material before joining ActualVCE, they may do so with a free sample trial. This Cybersecurity-Practitioner Exam simulation software can be readily installed on Windows-based computers and laptops. Since it is desktop-based Palo Alto Networks Cybersecurity-Practitioner practice exam software, it is not necessary to connect to the internet to use it.

## Palo Alto Networks Cybersecurity Practitioner Sample Questions (Q44-Q49):

### NEW QUESTION # 44

Which action must Security Operations take when dealing with a known attack?

- A. Limit the scope of who knows about the incident.
- B. Increase the granularity of the application firewall.
- C. Disclose details of the attack in accordance with regulatory standards.
- **D. Document, monitor, and track the incident.**

**Answer: D**

Explanation:

Security Operations (SecOps) is the process of coordinating and aligning security teams and IT teams to improve the security posture of an organization. SecOps involves implementing and maintaining security controls, technologies, policies, and procedures to protect the organization from cyber threats and incidents. When dealing with a known attack, SecOps must take the following action: document, monitor, and track the incident. This action is important because it helps SecOps to:

- \* Record the details of the attack, such as the source, target, impact, timeline, and response actions.
- \* Monitor the status and progress of the incident response and recovery efforts, as well as the ongoing threat activity and indicators of compromise.
- \* Track the performance and effectiveness of the security controls and technologies, as well as the lessons learned and improvement opportunities. Reference:

#### NEW QUESTION # 45

In which step of the cyber-attack lifecycle do hackers embed intruder code within seemingly innocuous files?

- A. delivery
- B. exploitation
- C. reconnaissance
- D. **weaponization**

**Answer: D**

Explanation:

"Weaponization: Next, attackers determine which methods to use to compromise a target endpoint. They may choose to embed intruder code within seemingly innocuous files such as a PDF or Microsoft Word document or email message."

#### NEW QUESTION # 46

Data Loss Prevention (DLP) and Cloud Access Security Broker (CASB) fall under which Prisma access service layer?

- A. **Security**
- B. Cloud
- C. Management
- D. Network

**Answer: A**

Explanation:

A SASE solution converges networking and security services into one unified, cloud-delivered solution (see Figure 3-12) that includes the following:

\* Networking

Software-defined wide-area networks (SD-WANs)

Virtual private networks (VPNs)

Zero Trust network access (ZTNA)

Quality of Service (QoS)

\* Security

Firewall as a service (FWaaS)

Domain Name System (DNS) security

Threat prevention

Secure web gateway (SWG)

Data loss prevention (DLP)

Cloud access security broker (CASB)

#### NEW QUESTION # 47

Which aspect of a SaaS application requires compliance with local organizational security policies?

- A. **Acceptable use of the SaaS application**
- B. Data-at-rest encryption standards
- C. Types of physical storage media used
- D. Vulnerability scanning and management

**Answer: A**

Explanation:

SaaS applications are cloud-based software that users can access from anywhere and any device. This poses a challenge for organizations to ensure that their employees are using the SaaS applications in a secure and compliant manner. Therefore, organizations need to establish and enforce acceptable use policies (AUPs) for SaaS applications that define the rules and guidelines for accessing and using the applications, such as who can use them, what data can be stored or shared, and what actions are prohibited<sup>1</sup>. AUPs help organizations to protect their data, prevent unauthorized access, and comply with local regulations and standards<sup>3</sup>. Reference: Using Software as a Service (SaaS) securely - NCSC, Minimum Security Standards for Software-as-a-Service (SaaS) and Platform-as-a-Service (PaaS) | University IT, How to Secure Your SaaS Applications - CyberArk

#### NEW QUESTION # 48

Anthem server breaches disclosed Personally Identifiable Information (PII) from a number of its servers. The infiltration by hackers was attributed to which type of vulnerability?

- A. a phishing scheme that captured a database administrator's password
- B. an intranet-accessed contractor's system that was compromised
- C. exploitation of an unpatched security vulnerability
- D. access by using a third-party vendor's password

**Answer: A**

Explanation:

The Anthem data breach of 2015 was caused by a phishing scheme that captured a database administrator's password. According to the U.S. Department of Health and Human Services (HHS) Office for Civil Rights (OCR), hackers sent phishing emails to an Anthem subsidiary. At least one employee responded. Attackers were able to plant malware on the company's system and gain remote access to confidential information<sup>1</sup>. The breach exposed the electronic protected health information of almost 79 million people, including names, Social Security numbers, medical identification numbers, addresses, dates of birth, email addresses, and employment information<sup>2</sup>.
