NEW QUESTION # 179

Your on-premises network contains an Active Directory domain.

You are deploying a new SAP environment on Azure.

You need to configure SAP Single Sign-On to ensure that users can authenticate to SAP GUI and SAP WebGUI.

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

☐

Answer:

Explanation:

☐

NEW QUESTION # 180

You have an Azure subscription.

You plan to deploy a QA landscape to SAP on Azure by using Azure Center for SAP solutions.

You need to use the Azure command-line interface (CLI) to deploy the landscape.

How should you complete the command? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

☐

Answer:

Explanation:

☐

NEW QUESTION # 181

You have an Azure subscription that contains a resource group named RG1. The role assignments for RG1 are shown in the following exhibit.

☐

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.

NOTE: Each correct selection is worth one point.

☐

Answer:

Explanation:

☐

Explanation:

Graphical user interface, application, table Description automatically generated

☐

Box 1: User2

Graphical user interface, application, table Description automatically generated

☐

Note:

Backup Contributor - This role has all permissions to create and manage backup except deleting Recovery Services vault and giving access to others. Imagine this role as admin of backup management who can do every backup management operation.

Box 2: User3

The User Access Administrator role lets you manage user access to Azure resources.

You have two Azure virtual machines that host a Microsoft SQL Server 2019 failover cluster instance (FCI) named FCI1. FCI1 hosts the database tier of an SAP NetWeaver system. The application tier connects to FCI1 by using a virtual network name (VNN) of fcil.contoso.com. Name resolution is provided by an Azure Private DNS zone. On FCI1, you implement a distributed network name (DNN) of FCI1DNN and verify that you can connect to fcildnn.contoso.com. You need to ensure that the application tier can use the DNN when connecting to FCI1. What should you do first?

- Answer: C**
