

AAISM Reliable Test Guide - AAISM Examcollection Free Dumps

BTW, DOWNLOAD part of ExamcollectionPass AAISM dumps from Cloud Storage: <https://drive.google.com/open?id=1YEB1fKQ1SO3gqZeuOmPiTwWtIO0h9tz>

Stop hesitating. If you want to experience our AAISM exam dumps, hurry to click ExamcollectionPass.com to try our pdf real questions and answers. You can free download a part of the dumps. Before you make a decision to buy ExamcollectionPass exam questions and answers, you can visit ExamcollectionPass to know more details so that it can make you understand the website better. In addition, about FULL REFUND policy that you fail the AAISM Exam, you can understand that information in advance. ExamcollectionPass.com is the website which absolutely guarantees your interests and can imagine ourselves to be in your position.

ISACA AAISM Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">AI Risk Management: This section of the exam measures the skills of AI Risk Managers and covers assessing enterprise threats, vulnerabilities, and supply chain risk associated with AI adoption, including risk treatment plans and vendor oversight.
Topic 2	<ul style="list-style-type: none">AI Governance and Program Management: This section of the exam measures the abilities of AI Security Governance Professionals and focuses on advising stakeholders in implementing AI security through governance frameworks, policy creation, data lifecycle management, program development, and incident response protocols.
Topic 3	<ul style="list-style-type: none">AI Technologies and Controls: This section of the exam measures the expertise of AI Security Architects and assesses knowledge in designing secure AI architecture and controls. It addresses privacy, ethical, and trust concerns, data management controls, monitoring mechanisms, and security control implementation tailored to AI systems.

AAISM Examcollection Free Dumps & Reliable AAISM Practice Questions

You may strand on some issues at sometimes, all confusions will be answered by the bountiful contents of our AAISM exam materials. Wrong choices may engender wrong feed-backs, we are sure you will come a long way by our AAISM practice questions. In fact, a lot of our loyal customers have became our friends and only rely on our AAISM study braindumps. As they always said that our AAISM learning quiz is guaranteed to help them pass the exam.

ISACA Advanced in AI Security Management (AAISM) Exam Sample Questions (Q159-Q164):

NEW QUESTION # 159

Which of the following technologies can be used to manage deepfake risk?

- A. Systematic data tagging
- B. Adaptive authentication
- C. Blockchain
- D. Multi-factor authentication (MFA)

Answer: C

Explanation:

The AAISM study material highlights blockchain as a control mechanism for managing deepfake risk because it provides immutable verification of digital media provenance. By anchoring original data signatures on a blockchain, organizations can verify authenticity and detect tampered or synthetic content. Data tagging helps organize but does not guarantee authenticity. MFA and adaptive authentication strengthen identity security but do not address content manipulation risks. Blockchain's immutability and traceability make it the recognized technology for mitigating deepfake challenges.

NEW QUESTION # 160

A PRIMARY objective of responsibly providing AI services is to:

- A. Improve the ability of AI models to learn from new data
- B. Build trust for decisions and predictions made by AI models
- C. Enable AI models to operate autonomously
- D. Ensure the confidentiality and integrity of data processed by AI models

Answer: B

Explanation:

AAISM emphasizes that the primary objective of responsible AI is to establish and maintain trust in AI-driven decisions and predictions. Trust is achieved through transparency, accountability, fairness, and governance.

While confidentiality and integrity are critical technical objectives, they are not the overarching purpose of responsible AI service provision. Autonomy and learning ability are features of AI, but without trust, adoption and compliance falter. The correct answer is that responsible AI services must focus on building trust in AI outcomes.

NEW QUESTION # 161

A large language model (LLM) has been manipulated to provide advice that serves an attacker's objectives.

Which of the following attack types does this situation represent?

- A. Privilege escalation
- B. Evasion attack
- C. Data poisoning
- D. Model inversion

Answer: B

Explanation:

AAISM categorizes the manipulation of an LLM at inference time, where crafted inputs cause outputs to serve attacker objectives, as an evasion attack. Evasion attacks exploit weaknesses in the model's decision-making boundaries by altering queries to produce compromised or misleading outputs. Privilege escalation refers to unauthorized access rights, data poisoning targets the training phase, and model inversion reconstructs training data. In this case, manipulation of outputs to align with an attacker's goals reflects an evasion attack.

NEW QUESTION # 162

Which of the following is the GREATEST benefit of performing AI security risk assessments?

- A. The risk register is updated with the latest AI risk
- B. The appropriate level of funding is secured for AI security risk
- C. Appropriate privacy risk controls are implemented for AI models
- **D. Risk prioritization decisions are made for AI security**

Answer: D

Explanation:

AAISM emphasizes that the core outcome of AI risk assessments is prioritization: mapping threat likelihood and business impact to determine which risks to treat first, at what strength, and with which controls.

Implementing privacy controls (A), funding alignment (B), and updating registers (C) are important outputs, but the greatest benefit is making defensible, prioritized decisions that align with risk appetite and optimize control selection and resource allocation.

NEW QUESTION # 163

Which of the following is the MOST effective action an organization can take to address data security risk when using generative AI features in an application?

- A. Rely on the AI provider's independent third-party audit reports for assurance
- B. Establish policies and awareness training for acceptable use of AI
- **C. Require opt-out provisions for data usage in service agreements**
- D. Establish guidelines and best practices with third parties for intellectual property ownership

Answer: C

Explanation:

AAISM directs organizations to manage third-party AI risks through contractual and technical controls that explicitly govern data use, retention, training/fine-tuning, isolation, and deletion. The most effective data-security action when consuming generative AI features is to require enforceable opt-out provisions that prohibit the provider from using the organization's data for training or secondary purposes and that mandate retention limits and secure deletion. Third-party audit reports (A) provide assurance but do not guarantee provider behavior for your specific data; awareness policies (B) are necessary but insufficient to control external processing; IP ownership guidelines (D) address legal rights, not data-security risk.
