

# Pass Guaranteed Quiz Authoritative VMware - 3V0-24.25 - Advanced VMware Cloud Foundation 9.0 vSphere Kubernetes Service Exam Sample Online

BONUS!!! Download part of ExamBoosts 3V0-24.25 dumps for free: <https://drive.google.com/open?id=1jZ-ioBueEaf-dVfl6jHOcH3zAGzhHOn>

Are you preparing for the coming 3V0-24.25 exam right now? And you feel exhausted when you are searching for the questions and answers to find the keypoints, right? In fact, you do not need other reference books. Our 3V0-24.25 study materials will offer you the most professional guidance. In addition, our 3V0-24.25 learning quiz will be updated according to the newest test syllabus. So you can completely rely on our 3V0-24.25 study materials to pass the exam.

We recommend you use VMware 3V0-24.25 practice material to prepare for your 3V0-24.25 certification exam. ExamBoosts provides the most accurate and real VMware 3V0-24.25 Exam Questions. These VMware 3V0-24.25 practice test questions will assist you in better preparing for the final VMware 3V0-24.25 exam.

>> 3V0-24.25 Exam Sample Online <<

## Fantastic VMware 3V0-24.25 Exam Sample Online Are Leading Materials & Authorized 3V0-24.25: Advanced VMware Cloud Foundation 9.0 vSphere Kubernetes Service

We are engaging in this line to provide efficient reliable 3V0-24.25 practice materials which is to help you candidates who are headache for their 3V0-24.25 exams. They spend a lot of time and spirits on this exam but waste too much exam cost. Our 3V0-24.25 quiz question torrent can help you half work with double results. Sometimes choice is more important than choice. After purchasing our exam 3V0-24.25 Training Materials, you will have right ways to master the key knowledge soon and prepare for 3V0-24.25 exam easily, you will find clearing 3V0-24.25 exam seems a really easily thing.

## VMware Advanced VMware Cloud Foundation 9.0 vSphere Kubernetes Service Sample Questions (Q44-Q49):

### NEW QUESTION # 44

A VKS Administrator needs to make the "Tanzu Standard" package set (containing packages like Contour and Prometheus) available to a newly provisioned TKG cluster named workload-cluster-1.

Review the following YAML manifest for the repository configuration:

```
apiVersion: packaging.carvel.dev/v1alpha1
```

```
kind: PackageRepository
```

```
metadata:
```

```
  name: tanzu-standard
```

```
  namespace: tkg-system
```

```
spec:
```

```
  fetch:
```

imgpkgBundle:

image: projects.registry.vmware.com/tkg/packages/standard/repo:v2.1.0

Which kubectl action correctly applies this configuration to enable package discovery on the cluster?

- A. Use the vSphere Client "Workload Management" UI to upload the YAML file to the Content Library.
- B. Switch the kubeconfig context to the Supervisor Namespace, then run `kubectl apply -f repo.yaml`.
- **C. Switch the kubeconfig context to the workload-cluster-1 context, then run `kubectl apply -f repo.yaml`.**
- D. Run `kubectl vsphere login --server=repo.vmware.com` to authenticate directly to the public repository.

Answer: C

### NEW QUESTION # 45

An administrator upgrades a VMware Cloud Foundation (VCF) Supervisor and the upgrade fails. Order the steps the administrator should take to determine the cause of the failure.

Restart the WCP Service	Navigate in VCF Operations to Fleet Management, Tasks, select the instance and Tasks	Check for errors or failed ClusterConfig objects	SSH into Supervisor Cluster to attempt manual cleanup

Answer:

Explanation:

Restart the WCP Service	Navigate in VCF Operations to Fleet Management, Tasks, select the instance and Tasks	Check for errors or failed ClusterConfig objects	SSH into Supervisor Cluster to attempt manual cleanup
Navigate in VCF Operations to Fleet Management, Tasks, select the instance and Tasks	Check for errors or failed ClusterConfig objects	SSH into Supervisor Cluster to attempt manual cleanup	Restart the WCP Service

Explanation:

Answer (Correct Order):

- \* Navigate in VCF Operations to Fleet Management # Tasks, select the instance and review Tasks
- \* Check for errors or failed ClusterConfig objects
- \* SSH into the Supervisor Cluster to review logs / attempt manual cleanup if required
- \* Restart the WCP Service

To determine why a Supervisor upgrade failed, you start where the platform records the most actionable failure context: the management-plane task history. The Fleet/Task view surfaces the upgrade workflow steps, timestamps, and the specific

operation that failed, which gives you the fastest pointer to the failing phase (precheck, image staging, reconciliation, add-on updates, etc.). Next, you validate the Kubernetes-side reconciliation state by checking for failed ClusterConfig objects, because Supervisor enablement/upgrade actions commonly drive configuration via controller reconciliation; a failed ClusterConfig often contains the clearest "reason" and "message" fields that explain what blocked progress (validation errors, dependency issues, unreachable endpoints, incompatible components).

If the management-plane/task view and ClusterConfig status still don't isolate the root cause, the next escalation is to SSH into the Supervisor to inspect component logs/events and identify low-level failures that may not bubble up cleanly (for example, admission failures, controller crashes, or connectivity/auth issues).

Finally, restarting WCP is a remediation step that can clear stuck states, but it's placed last because it can alter evidence and should not be your first action when you're still trying to identify the original failure cause.

#### NEW QUESTION # 46

Which two resources can be configured in a VM Class in VMware vSphere with vSphere Supervisor?  
(Choose two.)

- A. CPU
- B. Network interface
- C. Memory
- D. PCI devices
- E. Storage

**Answer: A,C**

Explanation:

A Virtual Machine Class (VM Class) in VMware vSphere with vSphere Supervisor is a policy-driven construct used to define the resource footprint of virtual machines managed via the Kubernetes API. Within the VCF 9.0 ecosystem, the VM Class acts as a blueprint that specifies the amount of virtual CPU (vCPU) and Memory (RAM) allocated to a VM instance. This abstraction allows developers to request standardized sizes (such as "best-effort-small" or "guaranteed-large") without requiring direct access to the underlying ESXi host configurations.

In the context of the vSphere Kubernetes Service (VKS), when a user deploys a VirtualMachine object or a Tanzu Kubernetes Cluster node, the system references the assigned VM Class to determine the resource reservations and limits. The vSphere Supervisor ensures that the hypervisor correctly allocates these compute resources based on the specified class. While specialized VM Classes can be created to support advanced hardware like GPUs (using PCI passthrough), the primary and mandatory resources defined in every VM Class are CPU and Memory. Storage is managed independently through StorageClasses and Persistent Volume Claims (PVCs), while networking is governed by the Supervisor Namespace's network settings. By centralizing these compute definitions, VCF 9.0 provides a consistent, scalable method for platform administrators to manage hardware resources while offering self-service capabilities to DevOps teams.

#### NEW QUESTION # 47

An administrator is maintaining several Kubernetes clusters deployed through a Supervisor Namespace in a vSphere Kubernetes Service environment. One of the microservices, a containerized API gateway, has started failing intermittently after a recent configuration update. Initial investigation shows that the pod is entering a CrashLoopBackOff state. The administrator needs to collect detailed runtime information directly from the pod, including both the standard output (STDOUT) and standard error (STDERR) streams, to analyze the application's behavior before the crash. Which command produces the required output?

- A. `kubectl logs`
- B. `kubectl describe`
- C. `kubectl get all`
- D. `kubectl events`

**Answer: A**

#### NEW QUESTION # 48

A Cloud Administrator initiates a Supervisor upgrade. The process hangs at 55% for an extended period.

The administrator checks the vCenter events and sees:

Event: Supervisor Upgrade Stalled

Detail: Waiting for Control Plane VM 'Supervisor-Control-Plane-VM-02' to power on.

Error: The operation failed due to a file lock on the datastore '[vsanDatastore]'.

Further investigation reveals that a backup job from a third-party tool is currently running on the old Control Plane VMs, holding a lock on the VM files.

What is the correct remediation to allow the upgrade to proceed? (Choose 2.)

- A. Migrate the Supervisor to a different datastore during the upgrade.
- **B. Cancel the backup job to release the file locks.**
- C. Restart the vCenter Server service.
- D. Manually delete the 'Supervisor-Control-Plane-VM-02' from disk.
- **E. The upgrade process will automatically retry once the locks are released; no manual intervention is strictly required if the backup finishes within the timeout window, but cancelling is the immediate fix.**

**Answer: B,E**

## NEW QUESTION # 49

.....

The Advanced VMware Cloud Foundation 9.0 vSphere Kubernetes Service (3V0-24.25) certification has become a basic requirement to advance rapidly in the information technology sector. Since VMware 3V0-24.25 actual dumps are vital to prepare quickly for the examination. Therefore, you will need them if you desire to ace the Advanced VMware Cloud Foundation 9.0 vSphere Kubernetes Service (3V0-24.25) exam in a short time.

**3V0-24.25 Passguide:** <https://www.examboosts.com/VMware/3V0-24.25-practice-exam-dumps.html>

VMware 3V0-24.25 Exam Sample Online There is no expiry of PDF, Just choose the right ExamBoosts 3V0-24.25 exam questions format demo and download it quickly, Our company is well known for its best and considered services as one of the leaders of 3V0-24.25 test prep questions designers in many years, There are numerous of feedbacks from our customers give us high praise on our 3V0-24.25 practice materials, VMware 3V0-24.25 Exam Sample Online You know you have limited time to prepare for it.

Nonbroadcast: Used on networks that interconnect more than two routers 3V0-24.25 but without broadcast capability, If you can do just these four things, you are, in my view, already starting to do real programming.
