ServiceNow Certified Implementation Specialist - Strategic Portfolio Management Sample Questions (Q11-Q16):

NEW QUESTION # 11

Use this table to configure the parameters displayed on a project card on the My Projects Space page of the Project Workspace.

- A. project_template_config
- B. pm_toplevel_project
- C. pm_home_page_config
- D. pm_project

Answer: C

Explanation:

Explanation

According to the ServiceNow documentation¹, the pm_home_page_config table is used to configure the parameters displayed on a project card on the My Projects Space page of the Project Workspace. The other tables are used for different purposes:

pm_project: Stores information about projects².

pm_toplevel_project: Stores information about top-level projects³.

project_template_config: Stores information about project templates.

NEW QUESTION # 12

When can a user choose from multiple rate types for their work, while logging a time card?

- A. Only if the capability is enabled in the Time Sheet Policies
- B. Only one (1) rate type can apply
- C. Only if the capability is enabled in the Project Preferences
- D. Only if this capability is enabled in the Project Record

Answer: A

Explanation:

According to the Using rate types and labor rate cards document, a user can choose from multiple rate types for their work, while logging a time card, only if the capability is enabled in the Time Sheet Policies. This capability allows users to select different rate types for different tasks, such as standard, overtime, or travel. The other options are not correct, as they are not the places where the capability can be enabled. The Project Record is used to create and update project details, such as name, description, and state. The Project Preferences are used to set the default values for project fields, such as number, type, and priority. The option C is not correct, as more than one rate type can apply if the capability is enabled.

NEW QUESTION # 13

Which role provides edit access so users can generate capacity planning in Portfolio Planning Workspace?

- A. sn_align_core.ap_read_only
- B. sn_align_ws.spw_capacity_read
- C. sn_align_ws.spw_capacity_user
- D. sn_align_ws.spw_financial_user

Answer: C

NEW QUESTION # 14

If a lens has four entities, which entity within the lens structure would not have a parent reference?

- A. Second-level entity
- B. Third-level entity
- C. Bottom entity
- D. Top-level entity

Answer: D

Explanation:

According to the ServiceNow documentation¹, a lens is a hierarchical structure that consists of entities and relationships. An entity is a data object that represents a business concept, such as a project, a demand, or a resource. A relationship is a link between two entities that defines how they are connected. A lens can have up to four levels of entities, each with a parent reference to the entity above it, except for the top-level entity, which has no parent reference. The top-level entity is the root of the lens and defines its scope and type. For example, a project lens has a project as the top-level entity, and a demand lens has a demand as the top-level entity.

NEW QUESTION # 15

Where is planned cost calculated from when requesting resources from a group and when resource role is specified?

- A. The distribution costs
- B. The CI rate cards.
- C. The hourly rate of the specified role.
- D. The task rate cards.

Answer: C

Explanation:

Explanation

According to the ServiceNow documentation¹, when requesting resources from a group and when resource role is specified, the planned cost is calculated from the hourly rate of the specified role. The system uses the rate card associated with the resource plan to determine the hourly rate for each role. The other options are incorrect because:

A: The distribution costs: The distribution costs are the costs that are distributed across the project tasks based on the resource plan allocation2.

B: The task rate cards: The task rate cards are the rate cards that are applied to the project tasks, not the resource plan3.

D: The CI rate cards: The CI rate cards are the rate cards that are applied to the configuration items, not the resource plan4.
