Valid Google Professional-Cloud-Developer Exam Pattern | Interactive Professional-Cloud-Developer Course

Our company is a professional certification exam materials provider, we have occupied in this field for more than ten years, and therefore we have rich experience. Professional-Cloud-Developer exam braindumps are high quality, because we have a professional team to collect the first-hand information for the exam, we can ensure that you can get the latest information for the exam. In addition, our company is strict with the quality and answers for Professional-Cloud-Developer Exam Materials, and therefore you can use them at ease. Our Professional-Cloud-Developer exam braindumps are known as instant access to download, you can obtain the downloading link and password within ten minutes.

Google Certified Professional - Cloud Developer Sample Questions (Q21-Q26):

NEW QUESTION # 21

You are a developer at a large organization. Your team uses Git for source code management (SCM). You want to ensure that your team follows Google-recommended best practices to manage code to drive higher rates of software delivery. Which SCM process should your team use?

- A. Each developer commits their code to the main branch before each product release, conducts testing, and rolls back if integration issues are detected.
- **B. Each developer creates a branch for their own work, commits their changes to their branch, and merges their code into the main branch daily.**
- C. Each group of developers copies the repository, commits their changes to their repository, and merges their code into the main repository before each product release.

- D. Each group of developers creates a feature branch from the main branch for their work, commits their changes to their branch, and merges their code into the main branch before each major release.

Answer: B

Explanation:

Following Google-recommended practices, frequent integration is key to reducing integration issues and driving higher rates of software delivery. By having each developer create their own branch, make commits, and merge into the main branch daily, the team ensures that integration happens continuously. This trunk-based development approach encourages regular testing and validation, making it easier to detect issues early and avoid large, complex integrations before releases.

This practice also aligns with CI/CD principles, which emphasize small, frequent commits and continuous integration to maintain high code quality and accelerate development velocity.

NEW QUESTION # 22

You are building an API that will be used by Android and iOS apps. The API must:

- * Support HTTPs
- * Minimize bandwidth cost
- * Integrate easily with mobile apps

Which API architecture should you use?

- A. SOAP-based APIs
- B. gRPC-based APIs
- C. MQTT for APIs
- **D. RESTful APIs**

Answer: D

Explanation:

Reference: <https://www.devteam.space/blog/how-to-build-restful-api-for-your-mobile-app/>

NEW QUESTION # 23

You are developing an internal application that will allow employees to organize community events within your company. You deployed your application on a single Compute Engine instance. Your company uses Google Workspace (formerly G Suite), and you need to ensure that the company employees can authenticate to the application from anywhere. What should you do?

- **A. Add an HTTP(S) load balancer in front of the instance, and set up Identity-Aware Proxy (IAP). Configure the IAP settings to allow your company domain to access the website.**
- B. Set up a VPN tunnel between your company network and your instance's VPC location on Google Cloud. Configure the required firewall rules and routing information to both the on-premises and Google Cloud networks.
- C. Add a public IP address to your instance, and restrict access to the instance using firewall rules. Allow your company's proxy as the only source IP address.
- D. Add a public IP address to your instance, and allow traffic from the internet. Generate a random hash, and create a subdomain that includes this hash and points to your instance. Distribute this DNS address to your company's employees.

Answer: A

Explanation:

NEW QUESTION # 24

Select the statement that appropriately sets customer expectations when fixing an issue.

- A. "I promise to have the product ready by midday tomorrow."
- **B. "We currently do not have that part in stock. I can call you as soon as the part arrives."**
- C. "Our courier always delivers on time."
- D. "Repairing this component is easy. We never fail to do it in less than four hours."

Answer: B

NEW QUESTION # 25

One of your deployed applications in Google Kubernetes Engine (GKE) is having intermittent performance issues. Your team uses a third-party logging solution. You want to install this solution on each node in your GKE cluster so you can view the logs. What should you do?

- A. Modify your container image to include the monitoring software
- **B. Deploy the third-party solution as a DaemonSet**
- C. Deploy the third-party solution using Terraform and deploy the logging Pod as a Kubernetes Deployment
- D. Use SSH to connect to the GKE node, and install the software manually

Answer: B

Explanation:

Explanation

https://cloud.google.com/kubernetes-engine/docs/concepts/daemonset#usage_patterns DaemonSets are useful for deploying ongoing background tasks that you need to run on all or certain nodes, and which do not require user intervention. Examples of such tasks include storage daemons like ceph, log collection daemons like fluent-bit, and node monitoring daemons like collectd.

NEW QUESTION # 26

.....

Our Professional-Cloud-Developer study question contains a lot of useful and helpful knowledge which can help you find a good job and be promoted quickly. Our Professional-Cloud-Developer test pdf is compiled by the senior experts elaborately and we update them frequently to follow the trend of the times. Before you decide to buy our study materials, you can firstly look at the introduction of our Professional-Cloud-Developer Exam Practice materials on our web.
