Salesforce Certified Sharing and Visibility Architect certification can help candidates stand out in a competitive job market and increase their earning potential.

Salesforce Certified Sharing and Visibility Architect Sample Questions (Q45-Q50):

NEW QUESTION # 45

Users at Universal Containers are complaining that a field has disappeared from the Account page after last weekend's deployment. The page layout did not change with this deployment. How should the admin troubleshoot this issue?

- A. Run a Who Sees What report, filtering on Account.
- B. Log in as 3 user and check several accounts to isolate the problem records.
- C. View Field Accessibility in the Object Manager.

Answer: C

Explanation:

If a field disappears from the Account page, the likely cause is that its visibility has been restricted through Field-Level Security (FLS) or a related profile/permission set update. Using Field Accessibility in Object Manager allows the admin to review and troubleshoot field permissions across profiles.

* Option A: A "Who Sees What" report is used for record visibility, not field visibility.

* Option B: Logging in as a user might help confirm the issue but doesn't provide insights into why the field is missing.

* Option C (Correct): Field Accessibility offers a comprehensive view of field-level security for troubleshooting.

:

Field Accessibility

NEW QUESTION # 46

Sales managers at Universal Containers (UC) have requested viewing customer invoices in Salesforce .. system. The architect at UC decided to surface the customer invoices in Salesforce using external objects a.. Configured an external object called Invoice.

Created a lookup relationship between account and the invoice

How can the architect grant the sales managers access to the customer invoices data?

- A. By creating sharing rules to share the invoice records with users in sales manager roles.
- B. By controlling the invoices object permission on the sales manager's profile.
- C. By creating a sharing set a share invoice with users in a sales manager role.
- D. By using manual sharing to share invoices with relevant sales managers.

Answer: B

Explanation:

Explanation

To grant the sales managers access to the customer invoices data, the architect should control the invoices object permission on the sales manager's profile. This will allow the sales managers to view and query the external object records, as long as they have access to the parent account records. Creating a sharing set or a sharing rule will not work, as they are not supported for external objects.

Using manual sharing will not work, as it is not available for external objects

NEW QUESTION # 47

The architect at Universal Containers would like to prevent users from editing encrypted fields. Assuming no customizations are implemented, which two options should the Architect choose to support the requirement?

Choose 2 answers

- A. Workflow Rules
- B. Validation Rules
- C. Page Layout settings
- D. Apex Triggers

Answer: B,C

Explanation:

Explanation

Validation rules and page layout settings are two options that the architect can use to prevent users from editing encrypted fields, assuming no customizations are implemented. Validation rules can be used to display an error message when a user tries to edit an encrypted field, and page layout settings can be used to make an encrypted field read-only or hidden from the user interface. Apex triggers and workflow rules are not options to prevent users from editing encrypted fields, as they are executed after the user has already modified the field

NEW QUESTION # 48

By default, how many roles are created when the first external user is created on a partner account?

- A. 0
- B. 1
- **C. 2**
- D. 3

Answer: C

Explanation:

Explanation

By default, three roles are created when the first external user is created on a partner account. These roles are Executive, Manager, and User. They form a role hierarchy that determines the level of access to data for the partner users

NEW QUESTION # 49

Universal Containers (UC) has a mostly private organization-wide default (OWD), as it is a core principle of UC to respect client data privacy. UC has implemented complex processes for granting access to Opportunity data. A few key members of the Sales Reporting team need to always be able to see, but not change, Opportunity data for all Opportunities.

What should an architect recommend as an approach to meet these requirements?

- **A. Create a Permission Set that grants "View All" permission for Opportunity.**
- B. Create a Permission Set that grants "View All Data" Permission.
- C. Give "View All Data" Permission to the Sales Reporting Profile.
- D. Make Opportunity OWD read-only.

Answer: A

Explanation:

Explanation

Creating a Permission Set that grants "View All" permission for Opportunity is the best approach to meet the requirements. This will allow the Sales Reporting team to view all Opportunity records without changing their profile or OWD settings. Creating a Permission Set that grants "View All Data" permission would give them access to all data in the org, which is not necessary. Making Opportunity OWD read-only would affect all users in the org, which may not be desirable. Giving "View All Data" permission to the Sales Reporting Profile would also give them access to all data in the org, which is not necessary
