Helpful Features of 156-215.82 PDF Questions

The RealExamFree is a revolutionary platform for professionals and students looking to pass the Prepare for your Check Point Certified Security Administrator - R82 (156-215.82) exam and advance their careers. Our mission is to provide a comprehensive, convenient, and cost-effective preparation material for individuals to prepare for the 156-215.82 Certification Exam.

CheckPoint Check Point Certified Security Administrator - R82 Sample Questions (Q110-Q115):

NEW QUESTION # 110
Due to high CPU workload on the Security Gateway, the security administrator decided to purchase a new multicore CPU to replace the existing single core CPU. After installation, is the administrator required to perform any additional tasks?

- A. Go to clash-Run cpconfig | Configure CoreXL to make use of the additional Cores | Exit cpconfig | Reboot Security Gateway
- B. Go to clash-Run cpconfig | Configure CoreXL to make use of the additional Cores | Exit cpconfig | Reboot Security Gateway | Install Security Policy
- C. Go to clash-Run cpstop | Run cpstart
- D. Administrator does not need to perform any task. Check Point will make use of the newly installed CPU and Cores

Answer: A

Explanation:

The correct answer is B because after installing a new multicore CPU, the administrator needs to configure CoreXL to make use of the additional cores and reboot the Security Gateway.Installing the Security Policy is not necessary because it does not affect the CoreXL configuration1. Check Point R81 Security Management Administration Guide

NEW QUESTION # 111
In which scenario will an administrator need to manually define Proxy ARP?

- A. When they configure an "Automatic Static NAT" which translates to an IP address that does not belong to one of the firewall's interfaces.
- B. When they configure a "Manual Static NAT" which translates to an IP address that does not belong to one of the firewall's interfaces.
- C. When they configure an "Automatic Hide NAT" which translates to an IP address that does not belong to one of the firewall's interfaces.
- D. When they configure a "Manual Hide NAT" which translates to an IP address that belongs to one of the firewall's interfaces.

Answer: B

Explanation:
NAT (Network Address Translation) is a technique that modifies the IP addresses or ports of packets that pass through a security gateway. NAT can be configured in two ways: Automatic or Manual. Automatic NAT means that the NAT rules are generated automatically by the security gateway based on the NAT properties of network objects. Manual NAT means that the NAT rules are defined explicitly by the administrator in the NAT policy. Proxy ARP (Address Resolution Protocol) is a technique that allows a security gateway to answer ARP requests on behalf of other hosts. Proxy ARP is needed when a host on one network segment tries to communicate with a host on another network segment that has a different IP address than its own. In some scenarios, an administrator will need to manually define Proxy ARP for NAT to work properly.One such scenario is when they configure a Manual Static NAT which translates to an IP address that does not belong to one of the firewall's interfaces2. Check Point R81 Network Address Translation Administration Guide

NEW QUESTION # 112
Fill in the blank: In Security Gateways R75 and above, SIC uses _____ for encryption.

- A. AES-128
- B. 3DES
- C. AES-256
- D. DES

Answer: A

Explanation:
In Security Gateways R75 and above, SIC uses AES-128 for encryption. SIC stands for Secure Internal Communication, which is a mechanism that establishes trust between Check Point components, such as Security Gateways, Security Management Servers, Log Servers, etc. SIC uses certificates to authenticate and encrypt the communication between the components. AES-128 is an encryption algorithm that uses a 128-bit key to encrypt and decrypt data. The other options are incorrect. AES-256 is an encryption algorithm that uses a 256-bit key, but it is not used by SIC. DES and 3DES are older encryption algorithms that use 56-bit and 168-bit keys respectively, but they are not used by SIC either. [Secure Internal Communication (SIC) between Check Point components], AES - Wikipedia, DES - Wikipedia, Triple DES - Wikipedia

NEW QUESTION # 113
Session unique identifiers are passed to the web api using which http header option?

- A. Accept-Charset
- B. Application
- C. Proxy-Authorization
- D. X-chkp-sid

Answer: D

Explanation:
The correct answer is A because session unique identifiers are passed to the web api using the X-chkp-sid http header option1.The X-chkp-sid header is used to authenticate and authorize API calls1. The other options are not related to session unique identifiers.
Check Point R81 Security Management Administration Guide

NEW QUESTION # 114
What Check Point tool is used to automatically update Check Point products for the Gaia OS?

- A. Check Point INSPECT Engine
- B. Check Point Update Engine
- C. Check Point Upgrade Service Engine
- D. Check Point Upgrade Installation Service

Answer: C

Explanation:
The Check Point Upgrade Service Engine (CPUSE) is a tool that automates the process of upgrading and installing Check Point products on Gaia OS1.It can also be used to update the Gaia OS itself2. The other options are not valid tools for this purpose.
