CompTIA 220-1202考題, 220-1202考題資源

Fast2test 的 220-1202 題庫是隨著 CompTIA 認證廠商對其做出的變化而變化的, 確保了題庫的覆蓋率在96%以上, 保證考生能順利通過 CompTIA 220-1202 考試, 獲取認證證書。我們的 CompTIA 220-1202 模擬測試題具有最高的專業技術含量, 供具有相關專業知識的專家和學者學習和研究之用。你還可以登陸我們題庫網站下載更多想要的認證考試題庫資料。

最新的 A+ 220-1202 免費考試真題 (Q29-Q34):

問題 #29

A user's computer is running slowly. Task Manager shows:

Disk: 2%

Network: 12%

GPU: 15%

CPU: 70%

Memory: 97%

Which of the following would a technician most likely do to resolve the issue?

- A. Upgrade the network connection
- B. Clear browser cached data
- C. Delete temporary files
- D. Close unnecessary programs

答案: D

解題說明:

Comprehensive and Detailed Explanation From Exact Extract:

Memory usage is critically high, suggesting many applications or background processes. Closing unnecessary programs will immediately free up RAM.

From Travis Everett - All-in-One Exam Guide:

"High memory usage with moderate CPU load usually means too many applications are open. Close unnecessary apps or use Task Manager to end processes."

問題 #30

Users are reporting that an unsecured network is broadcasting with the same name as the normal wireless network. They are able to access the internet but cannot connect to the file share servers. Which of the following best describes this issue?

- A. Rogue wireless access point
- B. Virtual local area network misconfiguration
- C. Unreachable DNS server
- D. Incorrect IP address

答案: A

解題說明:

Comprehensive and Detailed Explanation From Exact Extract:

This scenario describes a rogue access point - a malicious or unauthorized wireless access point that uses the same SSID as the legitimate network. Users may connect to it unknowingly, which can result in limited network access, data interception, or redirection of traffic. The inability to reach internal file servers supports this being an unauthorized AP with no connection to internal resources.

A: A DNS issue would impact name resolution, not connectivity to file servers directly.

B: VLAN issues generally affect segmentation, not mimic SSID problems.

C: An incorrect IP address could cause connectivity issues, but not in the presence of a malicious AP broadcasting the same SSID.

Reference:

CompTIA A+ 220-1102 Objective 2.4: Compare and contrast wireless and physical security threats.

Study Guide Section: Rogue access points and their detection

問題 #31

A technician is installing a cloud-based productivity suite and gets an error saying the installation is unavailable. What should be tried first?

- A. Check the license device limit
- B. Download an open-source alternative
- C. Reinstall the productivity suite
- D. Update the device OS

答案: A

解題說明:

Comprehensive and Detailed Explanation From Exact Extract:

Cloud-based software often enforces device limits per license. Before reinstallation or switching software, checking license allocations is the most logical first step.

From Quentin Docter - CompTIA A+ Complete Study Guide:

"Many cloud apps enforce user or device count restrictions. When an install fails, check licensing before troubleshooting other areas."

問題 #32

A technician uses AI to draft a document about new software benefits. Upon reading, the technician sees factually incorrect info. What term best describes this?

- A. Appropriate use
- B. Hallucinations
- C. Plagiarism
- D. Data privacy

答案: B

解題說明:

In AI terminology, hallucination refers to generated output that appears plausible but is factually incorrect.

From Quentin Docter - CompTIA A+ Complete Study Guide:

"AI hallucination describes output that is fluent and coherent but includes information that is entirely fabricated or inaccurate."

問題 #33

A network technician notices that most of the company's network switches are now end-of-life and need to be upgraded. Which of the following should the technician do first?

- A. Implement the change
- B. Approve the change
- **C. Propose the change**
- D. Schedule the change

答案：C

解題說明：

Comprehensive and Detailed Explanation From Exact Extract:

The first step in the IT change management process is to identify and propose the change. In this case, the technician notices a need (end-of-life network switches), so the appropriate action is to formally propose a change. This proposal would be documented and submitted for approval before any planning or implementation occurs.

According to the CompTIA A+ 220-1102 objectives under Operational Procedures (Domain 4.0), the change management process follows these typical steps:

- * Submit a change request (Propose the change)
- * Review and approval (Approve the change)
- * Planning and scheduling (Schedule the change)
- * Implementation
- * Documentation and review

Therefore, proposing the change is the correct first step in accordance with standard ITIL-based change management practices.

Reference:

CompTIA A+ 220-1102 Objective 4.1: Given a scenario, implement best practices associated with documentation and support systems information management.
