EAEP2201 Reliable Exam Sample - Exam EAEP2201 Blueprint

You will find that it is easy to buy our EAEP2201 exam questions, as you add them to the cart and pay for them. You can receive them in 5 to 10 minutes and then you can study at once. What's more, during the whole year after purchasing, you will get the latest version of our EAEP2201 Study Materials for free. You can see it is clear that there are only benefits for you to buy our EAEP2201 learning guide, so why not just have a try right now?

Upon successful completion of the Esri EAEP2201 Exam, candidates will receive an Enterprise Administration Professional certificate that showcases their competencies as ArcGIS Enterprise Administrators. The certificate provides a valuable credential to showcase one's skills and knowledge to peers, employers, and potential clients. Enterprise Administration Professional 2201 certification program also helps professionals to stay up-to-date with the latest advancements in the ArcGIS platform and maintain the expertise required to tackle the challenges of Enterprise solutions. Overall, the Esri EAEP2201 Exam is an excellent way for ArcGIS Enterprise Administration Professionals to validate their expertise and take their career to the next level.

Esri Enterprise Administration Professional 2201 Sample Questions (Q21-Q26):

NEW QUESTION # 21

A GIS administrator needs to add a member to the ArcGIS Enterprise organization. This member will perform publishing and editing workflows.

Which user type and role should the member be assigned?

- A. The GIS Professional user type and the Data Editor role
- **B. The Creator user type and the Publisher role**
- C. The Editor user type and the Publisher role

Answer: B

Explanation:

In ArcGIS Enterprise, the Creator user type includes full privileges for content creation, sharing, and administration. When paired with the Publisher role, it grants the user the ability to publish hosted feature layers, map image layers, and other services, as well as perform editing tasks on existing data. This combination is specifically designed for users who require both publishing and editing capabilities.

The Editor user type is limited to editing and cannot publish content. The GIS Professional user type provides access to ArcGIS Pro but, when assigned the Data Editor role, restricts the user from publishing content. Therefore, only the Creator user type with Publisher role supports both publishing and editing workflows.

NEW QUESTION # 22

After upgrading ArcGIS Enterprise, an administrator observes that some items, groups, and users are missing in the portal. What should the administrator check first?

- A. Portal for ArcGIS service status
- B. That the ArcGIS Data Stores are validating
- **C. Portal for ArcGIS index status**

Answer: C

Explanation:

After upgrading, it's essential to reindex the portal to ensure that all items, groups, and users are correctly displayed. The administrator should check the Portal for ArcGIS index status to verify if the reindexing process has completed successfully. Incomplete or failed reindexing can result in missing content within the portal.

Reference Source: ArcGIS Enterprise documentation on common problems and solutions after upgrading

NEW QUESTION # 23

A GIS administrator publishes a feature service that references user-managed data. The administrator wants users to add new features. Users should not make changes to attributes of existing features or delete features.

Which feature service operations should be set?

- **A. Create and query**
- B. Update and sync
- C. Extract and create

Answer: A

Explanation:

To allow users to add new features without the ability to modify or delete existing ones, the feature service should have the "Create" and "Query" operations enabled. The "Create" operation permits users to add new features, while the "Query" operation allows them to view existing features. By not enabling the "Update" and

"Delete" operations, users are restricted from making changes to or removing existing features. This configuration is ideal for workflows where data integrity is crucial, and only the addition of new data is permitted.

Enabling "Update and sync" (Option A) would allow users to modify existing features and synchronize changes, which is not desired in this scenario. "Extract and create" (Option C) is not a standard combination of operations for controlling editing permissions in feature services.

NEW QUESTION # 24

A GIS administrator must determine which type of service to use when publishing a new basemap for the organization. The basemap must meet several requirements:

* Support offline workflows

- * Use as little storage space as possible
- * High-resolution display
- * Easily incorporate data updates periodically made to a feature service Which service type should be used?
 - A. Vector tile service
 - **B. Dynamic map service**
 - C. Cached map service

Answer: B

NEW QUESTION # 25

An organization recently upgraded Portal for ArcGIS. The organization must reduce the number of named users to the maximum allowed by the authorization file and delete members in bulk.

Which action should the administrator perform?

- A. Batch delete users with ArcPy
- **B. Use command line utilities**
- C. Delete users using the Member tab

Answer: B

Explanation:

The most efficient and supported method for managing and removing multiple users after a Portal for ArcGIS upgrade is by using command line utilities, specifically the deleteusers utility included with Portal for ArcGIS. This tool allows administrators to batch delete user accounts by referencing a file that lists usernames. This method is especially useful when needing to quickly reduce the number of named users to comply with licensing restrictions.

Deleting users individually via the Member tab (Option B) is time-consuming and inefficient when dealing with large numbers of accounts. Using ArcPy (Option C) is not supported for managing Portal users in bulk.
