## CISI Investment Funds in Canada (IFC) Exam Sample Questions (Q227-Q232):

### NEW QUESTION # 227

What entity receives all fund money obtained from investors buying units/shares?

- A. Custodian
- B. Registrar
- C. Fund manager
- D. Dealer

Answer: A

Explanation:

The custodian, typically a trust company, receives and holds all funds from investors and other sources, managing the fund's assets and expenses. The feedback from the document states:

"The Custodian. When a mutual fund is established, a separate organization, most often a trust company, is appointed as the fund's custodian. The custodian receives and holds the fund's money obtained from all sources - investors buying the fund's units or shares, income earned by the fund's investment portfolio, proceeds from the sale of the fund's investments, holds all the fund's assets and distributes the fund's money to pay the fund's expenses." #### NEW QUESTION # 228

A fund manager who utilizes an interest rate anticipation philosophy forecasts a rise in interest rates. What change in asset allocation should he implement?

- A. Increase short-term T-bill and low coupon bond holdings
- **B. Increase short-term T-bill and high coupon bond holdings**
- C. Increase long-term bond and low coupon bond holdings
- D. Increase long-term and high coupon bond holdings

**Answer: B**

Explanation:

When anticipating rising interest rates, a fund manager using an interest rate anticipation philosophy should reduce interest rate sensitivity by increasing holdings in short-term T-bills and high coupon bonds, which are less affected by rate increases. The feedback from the document states:

"Interest rate anticipation is a fixed-income investing philosophy that involves moving between long-term government bonds and very short-term T-bills, based on a forecast of interest rates over a certain time horizon. Price sensitivity to interest rate movements increases as the term to maturity increases and the coupon decreases. Therefore, to avoid a large capital loss if interest rates rise, the fund manager would decrease the fund's interest rate sensitivity." #### NEW QUESTION # 229

The Optima Equity Fund has a beta of 1.4. What is the most accurate way to describe the Optima Equity Fund's relationship to the market as a whole?

- **A. If the market goes up by 5%, the Optima Fund should go up by 7%**
- B. If the market goes down by 10%, the Optima Fund should go up by 11.4%
- C. If the market goes up by 10%, the Optima Fund should go up by 11.4%
- D. If the market goes down by 5%, the Optima Fund should go down by 5.7%

**Answer: A**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

A beta of 1.4 indicates that the Optima Equity Fund is 1.4 times more volatile than the market. If the market rises by 5%, the fund is expected to rise by  $5\% \times 1.4 = 7\%$ . The feedback from the document states:

"One way to measure market risk is by calculating a portfolio's beta. Beta shows how much a portfolio fluctuates when the market as a whole fluctuates. A higher beta means that the portfolio is exposed to more risk. The market has a beta of 1.0. In this example: The Optima Equity Fund has a beta of 1.4, which means the Fund is expected to be 1.4 times more volatile than the market as a whole. If the S&P/TSX Composite Index is used to measure the performance of the Optima Fund, then if the Index rose by 10% you would expect to see the Optima Fund rise by 14% ( $1.4 \times 10\%$ )."
