In this rapid rhythm society, the competitions among talents are growing with each passing day, some job might ask more than one's academic knowledge it might also require the professional Palo Alto Networks certification and so on. It can't be denied that professional certification is an efficient way for employees to show their personal Palo Alto Networks Certified Cybersecurity Practitioner abilities. In order to get more chances, more and more people tend to add shining points, for example a certification to their resumes. What you need to do first is to choose a right PCCP Exam Material, which will save your time and money in the preparation of the PCCP exam. Our PCCP latest questions is one of the most wonderful reviewing Palo Alto Networks Certified Cybersecurity Practitioner study training dumps in our industry, so choose us, and together we will make a brighter future.

It is a truism that an internationally recognized PCCP certification can totally mean you have a good command of the knowledge in certain areas. If you are overwhelmed by workload heavily and cannot take a breath from it, why not choose our PCCP preparation torrent? We are specialized in providing our customers with the most reliable and accurate exam materials and help them pass their exams by achieve their satisfied scores. With our PCCP practice materials, your exam will be a piece of cake.

Valid PCCP Test Syllabus | PCCP Training Questions

Although the PCCP certificate is good, people who can successfully obtain each year are rare, and the difficulty of the PCCP exam and the pressure of study usually make the students feel discouraged. However, for us, these will no longer be a problem. In the past few years, our team has ushered in hundreds of industry experts, experienced numerous challenges day and night, and finally formed complete learning products--PCCP Exam Torrent, which is tailor-made for students who want to obtain the PCCP certificate.

Palo Alto Networks Certified Cybersecurity Practitioner Sample Questions (Q92-Q97):

NEW QUESTION # 92

Which method is used to exploit vulnerabilities, services, and applications?

- A. port evasion
- B. encryption
- C. port scanning
- D. DNS tunneling

Answer: A

Explanation:

Attack communication traffic is usually hidden with various techniques and tools, including:

Encryption with SSL, SSH (Secure Shell), or some other custom or proprietary encryption

Circumvention via proxies, remote access tools, or tunneling. In some instances, use of cellular networks enables complete circumvention of the target network for attack C2 traffic.

Port evasion using network anonymizers or port hopping to traverse over any available open ports

Fast Flux (or Dynamic DNS) to proxy through multiple infected endpoints or multiple, ever-changing C2 servers to reroute traffic and make determination of the true destination or attack source difficult

DNS tunneling is used for C2 communications and data infiltration

NEW QUESTION # 93

What protocol requires all routers in the same domain to maintain a map of the network?

- A. EIGRP
- B. Static
- C. RIP
- D. OSPF

Answer: D

Explanation:

OSPF is a link-state routing protocol that requires all routers in the same domain to maintain a map of the network. This map is called the link-state database (LSDB) and it contains information about the topology and the state of each link. Each router independently calculates the shortest path to every destination in the network using the Dijkstra algorithm. OSPF routers exchange routing information by flooding link-state advertisements (LSAs) to their neighbors. LSAs are acknowledged by the receivers to ensure reliable delivery. References:

NEW QUESTION # 94

Which security component can detect command-and-control traffic sent from multiple endpoints within a corporate data center?

- A. Next-generation firewall
- B. Personal endpoint firewall
- C. Stateless firewall
- D. Port-based firewall

Answer: A

Explanation:

A next-generation firewall (NGFW) is a security component that can detect command-and-control (C2) traffic sent from multiple

endpoints within a corporate data center. A NGFW is a network device that combines traditional firewall capabilities with advanced features such as application awareness, intrusion prevention, threat intelligence, and cloud-based analysis. A NGFW can identify and block C2 traffic by inspecting the application layer protocols, signatures, and behaviors of the network traffic, as well as correlating the traffic with external sources of threat intelligence. A NGFW can also leverage inline cloud analysis to detect and prevent zero-day C2 threats in real-time. A NGFW can provide granular visibility and control over the network traffic, as well as generate alerts and reports on the C2 activity. References:

NEW QUESTION # 95

Which capability does Cloud Security Posture Management (CSPM) provide for threat detection within Prisma Cloud?

- A. Continuous monitoring of resources
- B. Alerts for new code introduction
- C. Integration with threat feeds
- D. Real-time protection from threats

Answer: A

Explanation:

Cloud Security Posture Management (CSPM), including Prisma Cloud's offering, continuously monitors all cloud resources - such as compute instances, storage, network configurations, and identities - to detect misconfigurations, vulnerabilities, and potential threats in near real time.

NEW QUESTION # 96

What is the recommended method for collecting security logs from multiple endpoints?

- A. Build a script that pulls down the logs from all endpoints.
- B. Connect to the endpoints remotely and download the logs.
- C. Configure endpoints to forward logs to a SIEM.
- D. Leverage an EDR solution to request the logs from endpoints.

Answer: C

Explanation:

A SIEM (Security Information and Event Management) is a system that collects, analyzes, and correlates security logs from multiple sources, such as endpoints, firewalls, servers, etc. A SIEM can provide a centralized and comprehensive view of the security posture of an organization, as well as detect and respond to threats. Configuring endpoints to forward logs to a SIEM is the recommended method for collecting security logs from multiple endpoints, as it reduces the network bandwidth and storage requirements, simplifies the log management process, and enables faster and more effective security analysis. Leveraging an EDR (Endpoint Detection and Response) solution to request the logs from endpoints is not recommended, as it may cause performance issues on the endpoints, increase the network traffic, and create a dependency on the EDR solution. Connecting to the endpoints remotely and downloading the logs is not recommended, as it is a manual and time-consuming process, prone to errors and inconsistencies, and may expose the endpoints to unauthorized access. Building a script that pulls down the logs from all endpoints is not recommended, as it requires technical skills and maintenance, may not be compatible with different endpoint platforms, and may introduce security risks if the script is compromised or misconfigured.
