The Databricks Databricks-Certified-Data-Engineer-Associate questions formats are PDF dumps files, desktop practice test software, and web-based practice test software. All these Databricks Databricks-Certified-Data-Engineer-Associate questions format hold some common and unique features. Such as Databricks PDF dumps file is the PDF version of Databricks-Certified-Data-Engineer-Associate dumps that works all operating systems and devices. Whereas the other two PrepAwayETE practice test questions formats are concerned, both are the mock Databricks Databricks-Certified-Data-Engineer-Associate. Both will give you a real-time Databricks Databricks-Certified-Data-Engineer-Associate exam preparation environment and you get experience to attempt the Databricks-Certified-Data-Engineer-Associate preparation experience before the final exam.

The GAQM Databricks-Certified-Data-Engineer-Associate (Databricks Certified Data Engineer Associate) certification exam is a highly esteemed certification for data professionals. Databricks-Certified-Data-Engineer-Associate exam measures an individual's competence in designing, building, and maintaining data pipelines using Databricks. Databricks Certified Data Engineer Associate Exam certification covers a wide range of topics, including data engineering fundamentals, Databricks architecture, data modeling, and data processing.

Databricks Certified Data Engineer Associate Exam covers a wide range of topics, including data engineering fundamentals, data ingestion and processing, data warehousing and data lakes, data transformation and manipulation, and data quality and governance. Databricks-Certified-Data-Engineer-Associate Exam is designed to provide a comprehensive understanding of Databricks and its features, and to ensure that candidates are equipped with the necessary skills to work with Databricks effectively.

Databricks Databricks-Certified-Data-Engineer-Associate Trusted Exam Resource, New APP Databricks-Certified-Data-Engineer-Associate Simulations

We provide the free demos before the clients decide to buy our Databricks-Certified-Data-Engineer-Associate study materials. The clients can visit our company's website to have a look at the demos freely. Through looking at the demos the clients can understand part of the contents of our Databricks-Certified-Data-Engineer-Associate study materials, the form of the questions and answers and our software, then confirm the value of our Databricks-Certified-Data-Engineer-Associate Study Materials. If the clients are satisfied with our Databricks-Certified-Data-Engineer-Associate study materials they can purchase them immediately. They can avoid spending unnecessary money and choose the most useful and efficient Databricks-Certified-Data-Engineer-Associate study materials.

Databricks Certified Data Engineer Associate Exam Sample Questions (Q146-Q151):

NEW QUESTION # 146

A data engineer wants to schedule their Databricks SQL dashboard to refresh every hour, but they only want the associated SQL endpoint to be running when it is necessary. The dashboard has multiple queries on multiple datasets associated with it. The data that feeds the dashboard is automatically processed using a Databricks Job.

Which of the following approaches can the data engineer use to minimize the total running time of the SQL endpoint used in the refresh schedule of their dashboard?

- A. They can ensure the dashboard's SQL endpoint matches each of the queries' SQL endpoints.
- B. They can ensure the dashboard's SQL endpoint is not one of the included query's SQL endpoint.
- C. They can reduce the cluster size of the SQL endpoint.
- D. They can set up the dashboard's SQL endpoint to be serverless.
- **E. They can turn on the Auto Stop feature for the SQL endpoint.**

Answer: E

Explanation:

The Auto Stop feature allows the SQL endpoint to automatically stop after a specified period of inactivity. This can help reduce the cost and resource consumption of the SQL endpoint, as it will only run when it is needed to refresh the dashboard or execute queries. The data engineer can configure the Auto Stop setting for the SQL endpoint from the SQL Endpoints UI, by selecting the desired idle time from the Auto Stop dropdown menu. The default idle time is 120 minutes, but it can be set to as low as 15 minutes or as high as 240 minutes. Alternatively, the data engineer can also use the SQL Endpoints REST API to set the Auto Stop setting programmatically. Reference: SQL Endpoints UI, SQL Endpoints REST API, Refreshing SQL Dashboard

NEW QUESTION # 147

Identify how the count_if function and the count where x is null can be used Consider a table random_values with below data.

What would be the output of below query?

select count_if(col > 1) as count_

a. count(*) as count_b.count(col1) as count_c from random_values coll

0

1

2

NULL -

2

3

- A. 4 6 6
- B. 4 6 5
- **C. 3 6 5**
- D. 3 6 6

Answer: C

NEW QUESTION # 148

A data engineer is working with two tables. Each of these tables is displayed below in its entirety.

□ The data engineer runs the following query to join these tables together:

□ Which of the following will be returned by the above query?

- A. Option D
- B. Option E
- **C. Option A**
- D. Option B
- E. Option C

Answer: C

Explanation:

Option A is the correct answer because it shows the result of an INNER JOIN between the two tables. An INNER JOIN returns only the rows that have matching values in both tables based on the join condition. In this case, the join condition is ON

a.customer_id = c.customer_id, which means that only the rows that have the same customer ID in both tables will be included in the

output. The output will have four columns:

customer_id, name, account_id, and overdraft_amt. The output will have four rows, corresponding to the four customers who have accounts in the account table.

The use of INNER JOIN can be referenced from Databricks documentation on SQL JOIN or from other sources like W3Schools or GeeksforGeeks.

NEW QUESTION # 149

Identify the impact of ON VIOLATION DROP ROW and ON VIOLATION FAIL UPDATE for a constraint violation.

A data engineer has created an ETL pipeline using Delta Live table to manage their company travel reimbursement detail, they want to ensure that if the location details has not been provided by the employee, the pipeline needs to be terminated.

How can the scenario be implemented?

- A. CONSTRAINT valid_location EXPECT (location != NULL) ON DROP ROW
- **B. CONSTRAINT valid_location EXPECT (location != NULL) ON VIOLATION FAIL UPDATE**
- C. CONSTRAINT valid_location EXPECT (location = NULL)
- D. CONSTRAINT valid_location EXPECT (location != NULL) ON VIOLATION FAIL

Answer: B

NEW QUESTION # 150

A data engineer has configured a Structured Streaming job to read from a table, manipulate the data, and then perform a streaming write into a new table.

The code block used by the data engineer is below:

□
If the data engineer only wants the query to execute a micro-batch to process data every 5 seconds, which of the following lines of code should the data engineer use to fill in the blank?

- A. trigger()
- B. trigger("5 seconds")
- C. trigger(continuous="5 seconds")
- **D. trigger(processingTime="5 seconds")**
- E. trigger(once="5 seconds")

Answer: D

Explanation:

The processingTime option specifies a time-based trigger interval for fixed interval micro-batches. This means that the query will execute a micro-batch to process data every 5 seconds, regardless of how much data is available. This option is suitable for near-real time processing workloads that require low latency and consistent processing frequency. The other options are either invalid syntax (A, C), default behavior (B), or experimental feature (E). References: Databricks Documentation - Configure Structured Streaming trigger intervals, Databricks Documentation - Trigger.

NEW QUESTION # 151

.....

Databricks Certified Data Engineer Associate Exam (Databricks-Certified-Data-Engineer-Associate) PDF dumps are the third and most convenient format of the Databricks Databricks-Certified-Data-Engineer-Associate PDF questions prep material. This format is perfect for busy test takers who prefer to study for the Databricks Certified Data Engineer Associate Exam (Databricks-Certified-Data-Engineer-Associate) exam on the go. Questions bank in the PrepAwayETE Databricks Databricks-Certified-Data-Engineer-Associate Pdf Dumps is accessible via all smart devices. We also update Databricks Certified Data Engineer Associate Exam (Databricks-Certified-Data-Engineer-Associate) PDF questions regularly to ensure they match with the new content of the Databricks-Certified-Data-Engineer-Associate exam.
