Um jeder Adobe AD0-E725 Prüfungsunterlagen Benutzer einen bequemen Prozess zu haben, bieten wir Ihnen 3 Versionen von Adobe AD0-E725 Prüfungsunterlagen, nämlich PDF-, Online-, und Software-Version. Eine der Versionen kann für Sie taugen und Ihnen helfen, innerhalb der kürzesten Zeit Adobe AD0-E725 zu bestehen und die autoritativste internationale Zertifizierung zu erwerben!

Adobe AD0-E725 Prüfungsplan:

Thema	Einzelheiten
Thema 1	Section 1: Architecture: This section of the exam measures the skills of Backend Developers and covers the core structural concepts of Adobe Commerce. It involves demonstrating effective cache implementation, understanding key code components like plugins and observers, and managing multi-site configurations on a single instance. The domain also includes explaining the use of Git patches, critical security features, the CRON scheduling system, and how indexing functions within the platform.
Thema 2	Cloud: This section of the exam measures the skills of Cloud Architects and covers the deployment and management of Adobe Commerce on cloud infrastructure. It requires explaining the fundamental cloud architecture, performing setup and configuration tasks, and utilizing the Adobe Commerce Cloud CLI tool to manage the environment effectively.
Thema 3	Customizations: This section of the exam measures the skills of Solutions Engineers and involves modifying and extending platform functionality. This includes customizing core areas like the product catalog, checkout process, and admin panel, as well as manipulating data entities, customizing APIs, working with message queues, and writing integration tests to ensure code quality and functionality.

Thema 4	• External Integrations: This section of the exam measures the skills of Integration Specialists and focuses on connecting Adobe Commerce with external SaaS services. It encompasses the skills needed to customize data flows, utilize Adobe App Builder for extensibility, and implement Adobe I • O events and webhooks to create automated and connected business processes.

AD0-E725 Examsfragen - AD0-E725 Testking

Die Adobe AD0-E725 Fragenkataloge von ITZert werden von den IT-Experten konzipiert. Sein Design ist eng mit dem heutigen schnell verändernden IT-Markt verbunden. Die Ausbildung von ITZert wird Ihnen helfen, mit der erneuerten Technik Ihre Fähigkeit zur Problemlösung zu fördern und Ihre Zufriedenheit am Arbeitsplatz zu verbessern. Die Deckung der Adobe AD0-E725 Zertifizierung von ITZert ist um 100% als geplant gestiegen. Solange Sie unsere Prüfungsfragen und Antworten verwenden, garantieren wir Ihnen, dass Sie zum ersten Mal die Adobe AD0-E725 Prüfung mühelos bestehen können.

Adobe Commerce Developer Expert AD0-E725 Prüfungsfragen mit Lösungen (Q16-Q21):

16. Frage

A recent client-reported bug is fixed by the Adobe Commerce community. The Adobe engineering team has not yet released the patch or committed the bug fix to GitHub. A Developer acquires the custom patch and releases it to their Adobe Commerce environments.

What are the recommended steps the Developer should follow to implement the custom patch for the bug fix?

- A. Update the quality-patches module and list the required patch in the magento-ce-patch.yaml file.
- **B. Install the cweagans/composer-patches module and edit the composer.json file to apply the custom patch.**
- C. Install only official patches supplied by them to maintain upgradability.

Antwort: B

Begründung:

If a bug fix patch has not yet been officially released by Adobe (via Quality Patches Tool (QPT)), developers can apply custom patches using the cweagans/composer-patches package.

Option A is best practice in general, but in urgent scenarios, custom patches are allowed.

Option B applies only for official Adobe patches distributed via QPT, not for community-supplied or custom fixes.

Option C is correct: cweagans/composer-patches allows applying custom patches via composer.json until an official fix is available.

17. Frage

A Developer is working on an Adobe Commerce store, and the security team has flagged certain inline scripts in the store as vulnerable to potential attacks. The Developer decides to implement Content Security Policies (CSP) to secure the store's environment.

What will the Developer achieve by taking this action?

- A. Ensure that all user input is sanitized before being processed by the application.
- **B. Restrict which resources (scripts, styles, images) are allowed to load on the website.**
- C. Prevent users from accessing certain areas of the website based on their IP address.

Antwort: B

Begründung:

Comprehensive and Detailed Explanation (with official references):

The correct answer is C. Restrict which resources (scripts, styles, images) are allowed to load on the website.

Adobe Commerce supports Content Security Policy (CSP), a browser-level security feature that mitigates certain types of attacks such as Cross-Site Scripting (XSS) and data injection attacks.

By defining a CSP in Adobe Commerce, developers can control:

- * Which scripts can be executed (script-src).
- * Which stylesheets can be applied (style-src).
- * Which images and media can be loaded (img-src, media-src).
- * Whether inline scripts or styles are allowed.

This does not sanitize user input (A) nor restrict user access based on IP addresses (B). Instead, it focuses on restricting the sources of content that the browser can load.

Official Documentation Extracts:

* "Content Security Policy (CSP) is an added layer of security that helps to detect and mitigate certain types of attacks, including Cross-Site Scripting (XSS) and data injection attacks. CSP works by restricting the sources from which content can be loaded."- Adobe Commerce DevDocs: Content Security Policy

* "A CSP allows developers to define approved sources of content that browsers can load. These policies help reduce the risk of malicious content injection in Magento storefronts."- Adobe Commerce Security Guide

18. Frage

An Adobe Commerce Expert is tasked with configuring different pricing for products across a multi-site installation. Each website requires independent control of its prices while using the same catalog data.

What is the minimum store hierarchy structure required to achieve this?

- A. Multiple websites, each with one store and at least one store view
- B. Multiple stores and a single store view for each store
- C. One website, one store, and multiple store views

Antwort: A

Begründung:

In Adobe Commerce, product prices are scoped at the website level. To allow different prices per site while sharing the same catalog, you must create multiple websites, each with its own store and store view(s).

A (multiple stores, single website) # shares the same price configuration.

B (multiple store views) # only useful for localization (translations), but pricing is still shared.

C is correct because each website maintains independent pricing.

19. Frage

An Adobe Commerce Developer creates a module that adds a product attribute via a data patch.

Adhering to best practices, how should the Developer remove this product attribute when the module is uninstalled?

- A. Delete the custom attribute directly from the database.
- B. Create a new CLI command that needs to be executed before the bin/magento module:uninstall Vendor_ModuleName.
- C. Make the patch implement Magento\Framework\Setup\Patch\PatchRevertableInterface with the revert() method in it.

Antwort: C

20. Frage

A Developer needs to replicate a recent issue that occurred in the staging environment so it can be tested locally. The Developer decides to dump the staging database and import it into the local setup.

Which command should the Developer use to do this?

- A. magento-cloud snapshot:db-dump
- B. vendor/bin/ece-tools db-dump
- C. vendor/bin/ece-tools db-snapshot

Antwort: B
