## Salesforce Mule-Dev-202 Trustworthy Exam Content & Mule-Dev-202 Latest Test Vce

Mule-Dev-202 PDF questions can be read on various smart devices such as laptops, tablets, and smartphones. Salesforce Mule-Dev-202 PDF format is easier to download and use. Our Salesforce Mule-Dev-202 exam questions in PDF file can be printed, making it easy to study via a hard copy. To be recognized by Salesforce Mule-Dev-202 candidates must pass the Salesforce Certified MuleSoft Hyperautomation Developer (Mule-Dev-202) exam and the registration fee for the exam is high, between \$100 and \$1000. Therefore, candidates will never risk their precious time and money.

## Salesforce Certified MuleSoft Hyperautomation Developer Sample Questions (Q21-Q26):

### NEW QUESTION # 21

AnyAirlines implements a credit card program that requires customer applications to go through a review process before approval. They want to develop a series of hyperautomation solutions that will integrate to process the applications and enter the customer's information into a legacy system once approved.

They want to complete the following components:

An Einstein bot that will initiate the credit card application and create a record of an existing Salesforce Custom Object A Salesforce flow that marks the credit card application as approved in Salesforce An RPA process that interacts with multiple applications and websites A simple MuleSoft Composer flow that triggers if a credit card application is approved and then invokes an RPA process Which component will likely require the most effort to complete?

- A. A simple MuleSoft Composer flow that triggers if a credit card application is approved and then invokes an RPA process
- B. A Salesforce flow that marks the credit card application as approved in Salesforce
- C. An RPA process that interacts with multiple applications and websites

- D. An Einstein bot that will initiate the credit card application and create a record of an existing Salesforce Custom Object

**Answer: C**

Explanation:

Developing an RPA process that interacts with multiple applications and websites typically requires the most effort due to several factors:

Complexity of Interaction:

RPA processes involve simulating human actions to interact with different user interfaces. This includes navigating web pages, filling out forms, and clicking buttons, which can be complex and time-consuming to script and test.

Integration Challenges:

The RPA process must handle different applications and websites, each with unique behaviors and potential for errors. Ensuring reliable and consistent interaction across these systems requires thorough testing and potentially custom handling for each system.

Maintenance and Updates:

RPA processes need to be maintained and updated as the applications or websites they interact with change.

This ongoing effort can be significant compared to other components.

MuleSoft RPA Documentation

## NEW QUESTION # 22

Which component of Anypoint Platform is responsible for enforcing API policies?

- **A. API Gateway**
- B. API Manager
- C. API Analytics
- D. API Runtime

**Answer: A**

Explanation:

The component of Anypoint Platform responsible for enforcing API policies is the API Gateway.

API Gateway:

The API Gateway is a runtime component that enforces policies applied to APIs. It acts as an intermediary that manages API traffic, security, and performance by applying the policies configured in API Manager.

Policies such as rate limiting, security, transformation, and monitoring are enforced at the API Gateway to ensure that APIs are accessed securely and efficiently.

Anypoint Platform API Gateway Documentation

## NEW QUESTION # 23

A Salesforce admin for AnyAirlines constructs a MuleSoft Composer flow that retrieves a record based on a unique ID using the Get Records action from a Salesforce connector. They will use the result to send a Slack message.

How can they achieve this task?

- A. 1. Add a For Each loop after the Salesforce action step iterating over the collection of Salesforce records.2. Use a Slack action step to construct the messages from the record being processed.
- B. 1. Add an If/Else Block after the Salesforce action step, which contains a branch checking if the Salesforce action step returned exactly one record.2. In the branch, add a Slack action step and use the record to construct the message.
- C. 1. Add a Slack action step after the Salesforce action step.2. Use the first record from the collection of Salesforce records to construct the message.
- **D. 1. Add a Slack action step after the Salesforce action step.2. Use the record to construct the message.**

**Answer: D**

Explanation:

Salesforce Action Step:Start by adding a Salesforce action step that uses the Get Records action to retrieve the record based on a unique ID. This action retrieves the specific record needed.

Reference:MuleSoft Composer Salesforce Connector

Add Slack Action Step:After retrieving the record, add a Slack action step. This step will be used to send the message to Slack.

Reference:MuleSoft Composer Slack Connector

Use the Record:Use the retrieved record directly to construct the message in the Slack action step. This ensures the message contains the relevant information from the Salesforce record.

Reference:Building Messages in Composer

No Need for Collection Handling:Since the Get Records action retrieves a single record based on a unique ID, there is no need to handle collections or iterate through records.

Reference:Get Records Action

#### NEW QUESTION # 24

Northern Trail Outfitters is concerned about security in their Salesforce org regarding their newly created hyperautomation flow that calls a MuleSoft API. A mechanism needs to be implemented that restricts which users can invoke the flow.

Which setting is available to a hyperautomation practitioner that meets this security requirement?

- A. Assign an appropriate profile or permission set to users in the connected app.
- B. Configure OAuth 2.0 in the external service.
- C. Configure OAuth 2.0 in the connected app.
- D. Assign an appropriate profile or permission set to users in the external service.

**Answer: A**

Explanation:

Profiles and Permission Sets:Assigning the appropriate profile or permission set to users in the connected app restricts access to the MuleSoft API. This method ensures that only authorized users can invoke the hyperautomation flow.

Reference:Salesforce Connected App Security

OAuth 2.0 Configuration:Configuring OAuth 2.0 is important for authentication, but it does not directly control which users can invoke the flow. The profile or permission set is used to manage user permissions.

Reference:OAuth 2.0 Overview

External Service Permissions:Assigning permissions in the external service is less relevant than managing permissions within Salesforce, where the flow is executed.

Reference:External Services in Salesforce

Connected App Security:Properly securing the connected app by configuring user profiles and permission sets ensures compliance with security policies and restricts access as required.

Reference:Managing Access with Connected Apps

#### NEW QUESTION # 25

An employee at AnyAirlines uses RPA Recorder to capture actions performed when carrying out a business process automation. How does this help expedite RPA process development?

- A. BPMN is autogenerated, which includes documentation in the form of images and a complete recording of keyboard actions and wait times.
- B. BPMN is autogenerated with complete test plans and run configurations that can be executed in the test and production phases.
- C. BPMN is autogenerated with documentation and workflows containing the recorded actions that are automatically created during the build phase.
- D. BPMN is autogenerated, including documentation in the form of images and a fully functional RPA process with workflows and conditional branching.

**Answer: A**

Explanation:

Using RPA Recorder to capture actions performed during a business process automation helps expedite RPA process development in the following way:

Autogenerating BPMN:

The RPA Recorder captures the business process as it is performed and autogenerates a Business Process Model and Notation (BPMN) diagram. This diagram includes a visual representation of the process, making it easier to understand and modify.

Detailed Documentation:

Along with the BPMN, the recorder generates detailed documentation that includes images of the steps performed, as well as a complete recording of keyboard actions and wait times. This provides a comprehensive view of the process, which can be reviewed and refined.

Expediting Development:

By automating the creation of BPMN and detailed documentation, the RPA Recorder significantly reduces the time required to document and design the RPA process manually. This allows developers to focus on refining and optimizing the process rather than starting from scratch.
