They give users access to information and exam, offering simulative testing environment when you participate it like in the classroom. Besides, contents of AZ-120 study guide are selected by experts which are appropriate for your practice in day-to-day life. It is especially advantageous for busy workers who lack of sufficient time to use for passing the AZ-120 Preparation materials. And as the high pass rate of more than 98%, you will pass for sure with it.

Microsoft Planning and Administering Microsoft Azure for SAP Workloads Sample Questions (Q39-Q44):

NEW QUESTION # 39

You plan to deploy a high availability SAP environment that will use a failover clustering solution.

You have an Azure Resource Manager template that you will use for the deployment. You have the following relevant portion of the template.

What is created by the template?

- A. a zonal frontend IP address for the internal Azure Standard Load Balancer
- B. a zone-redundant frontend IP address for the internal Azure Standard Load Balancer
- C. a zone-redundant frontend IP address for the internal Azure Basic Load Balancer

- D. a zone -redundant public IP address for the internal load balancer

Answer: A

Explanation:

Reference:

<https://docs.microsoft.com/en-us/azure/load-balancer/load-balancer-standard-availability-zones>

NEW QUESTION # 40

You have an SAP production landscape that uses SAP HANA databases.

You configure a metric alert for the primary HANA server as shown in the following exhibit.

Answer:

Explanation:

Explanation

Graphical user interface, text, application, email Description automatically generated

Box 1: No

The period is 15 minutes. Only alerts or emails will be sent.

Box 2: Yes

Box 3: Yes

NEW QUESTION # 41

You have an on-premises SAP environment that runs on SUSE Linux Enterprise Server (SLES) servers and Oracle. The version of the SAP ERP system is 6.06 and the version of the portal is SAP NetWeaver 7.3.

You need to recommend a migration strategy to migrate the SAP ERP system and the portal to Azure. The solution must be hosted on SAP HANA.

What should you recommend? To answer, drag the appropriate tools to the correct components. Each tool may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation

1) SUM+DMO+System update.

2) Heterogeneous system copy.

NEW QUESTION # 42

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

1. No

Oracle Data Guard running in Maximum Availability mode. Currently, Oracle Real Application Clusters (RAC) is not supported in Azure - either for high availability or for scalability

2. Yes

3. No

The following OS versions are supported with the Oracle Database on Microsoft Azure:

Windows Server 2019 (only from Oracle Database 19.5.0 on)

Windows Server 2016 (only from Oracle Database 12.2.0.1 on)

Windows Server 2012 (no support for Oracle Database 19c)

Windows Server 2012 R2

Windows Server 2008 R2 Service Pack 1 (no support for Oracle 12.2.0.1)

Oracle Linux 7

Oracle Linux 8 (only from Oracle Database 19.7.0 on)

NEW QUESTION # 43

You have an Azure Availability Set that is configured as shown in the following exhibit.

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation

Box 1: the same fault domain

Fault domains define the group of virtual machines that share a common power source and network switch. If a storage fault domain fails due to hardware or software failure, only the VM instance with disks on the storage fault domain fails.

Box 2: managed disks

Managed disks provide better reliability for Availability Sets by ensuring that the disks of VMs in an Availability Set are sufficiently isolated from each other to avoid single points of failure. It does this by automatically placing the disks in different storage fault domains (storage clusters) and aligning them with the VM fault domain.
