

1z1-076 Exam Dumps & 1z1-076 Dumps Guide & 1z1-076 Best Questions

[Jun-2024] Free 1z1-076 Exam Dumps to Improve Exam Score [Q15-Q37]

BONUS!!! Download part of PracticeMaterial 1z1-076 dumps for free: https://drive.google.com/open?id=1n_fs8Yw_h7DSSaI5HI82Ee95HBnGhnKb

Our company has employed a lot of leading experts in the field to compile the Oracle Database 19c: Data Guard Administration exam question. Our system of team-based working is designed to bring out the best in our people in whose minds and hands the next generation of the best 1z1-076 exam torrent will ultimately take shape. Our company has a proven track record in delivering outstanding after sale services and bringing innovation to the guide torrent. The team of the experts in our company has an in-depth understanding of the fundamental elements that combine to produce world class 1z1-076 Guide Torrent for our customers. This expertise coupled with our comprehensive design criteria and development resources combine to create definitive 1z1-076 exam torrent.

PracticeMaterial is a trusted platform that has been helping Oracle Database 19c: Data Guard Administration 1z1-076 candidates for many years. Over this long time period, countless candidates have passed their Oracle Database 19c: Data Guard Administration 1z1-076 Exam and they all got help from Oracle Database 19c: Data Guard Administration practice questions and easily pass the final exam.

>> Reliable 1z1-076 Exam Practice <<

1z1-076 Exam Bootcamp & 1z1-076 Dumps Torrent & 1z1-076 Exam Simulation

Many people worry about that they have no time for practice the 1z1-076 exam dumps and the cost of test is high. If you failed the test, it will be terrible to you. Getting the Oracle certification quickly seems impossible to you. Maybe our 1z1-076 Dumps PDF is a better choice for you. It will help you get clear real exam quickly and effectively.

Oracle Database 19c: Data Guard Administration Sample Questions (Q82-Q87):

NEW QUESTION # 82

Which TWO statements correctly describe the behavior of Automatic Block Media Recovery in a Data Guard environment, for a corrupt block in the example tablespace encountered by a session logged in as the SH user?

- A. A corrupt block on the primary database is automatically recovered, using a block from a flashback log from the primary database.
- B. A corrupt block on the primary database is automatically recovered, using a block from a flashback log from a standby database with Real-Time Query enabled.

- C. A corrupt block on a standby database with Real-Time Query enabled, is automatically recovered, using flashback logs from the standby database.
- D. A corrupt block on a standby database with Real-Time Query enabled, can be automatically recovered, using a block from the primary database.
- E. A corrupt block on the primary database can be automatically recovered, using a block from a standby database with Real-Time Query enabled.

Answer: A,E

Explanation:

Automatic Block Media Recovery can be a significant feature for maintaining data integrity within a Data Guard configuration.

A corrupt block on the primary database can be automatically recovered, using a block from a standby database with Real-Time Query enabled (A): When a corrupted block is encountered on the primary database, Oracle can automatically replace it with a good block from the standby database where Real-Time Query is enabled, leveraging the standby as a source of good data.

A corrupt block on the primary database is automatically recovered, using a block from a flashback log from the primary database (E): If a good block version is available in the flashback logs of the primary database, Automatic Block Media Recovery can use it to recover the corrupted block on the primary.

NEW QUESTION # 83

Your Data Guard environment has one physical standby database using Real-Time Query. Two sequences have been created by these SQL statements:

□ Neither sequence has been used since being created.

Session 1 connects to the primary database instance and issues these two SQL statements:

SELECT a.nextval FROM DUAL; SELECT b.nextval FROM DUAL;

Then session 2 connects to the physical standby database instance and issues the same SQL statements. Which output will be seen for session 2?

Then session 2 connects to the physical standby database instance and issues the same SQL statements. Which output will be seen for session 2?

A)

□ B)

□ C)

□

- A. Option D
- B. Option B
- C. Option C
- D. Option A

Answer: C

Explanation:

In Oracle, a sequence created with the GLOBAL keyword is available and can produce values across all sessions and instances.

However, a sequence created with the SESSION keyword is only specific to the session it was created in. When the NEXTVAL is called for a sequence, it will increment according to the sequence's properties set during its creation.

Given the sequence creation statements and the actions performed:

The a sequence is global, which means it is available across the entire database, including the standby database with Real-Time Query enabled. So, when session 2 calls a.nextval, it will get the next value in the sequence, which is 21 since session 1 already retrieved 1.

The b sequence is session-specific, so when session 2 calls b.nextval, it will get the value 1 because for this new session on the standby, this is the first time the sequence is being accessed.

Therefore, the output for session 2 will be a output as 21 and b output as 1, which corresponds to Option C.

NEW QUESTION # 84

Which three Data Guard monitoring activities may be performed using Enterprise Manager Cloud Control?

- A. You can set a warning threshold on the redo generation rate metric for a physical standby database.
- B. You can monitor the redo apply rate on a logical standby database.

- C. You can set a critical threshold on the redo generation rate metric for a primary database.
- D. You can check if redo apply needs to be tuned.
- E. You can check the potential data loss in the event of a disaster.
- F. You can monitor the redo apply rate on a snapshot standby database.

Answer: B,C,E

Explanation:

Enterprise Manager Cloud Control offers comprehensive monitoring capabilities for Oracle Data Guard environments. It enables monitoring the rate at which redo is being applied on a logical standby database (A), which is crucial for ensuring that the standby database is keeping up with the changes from the primary. It also allows setting thresholds on performance metrics, such as the redo generation rate on the primary database (B), to alert administrators when values exceed critical or warning thresholds. Additionally, it provides the capability to estimate the potential data loss in the event of a disaster (E), helping in disaster recovery planning and ensuring business continuity.

Reference:

Oracle Enterprise Manager Cloud Control documentation provides extensive information on its monitoring features for Oracle Data Guard, including setting thresholds, estimating potential data loss, and tracking redo apply rates.

NEW QUESTION # 85

Which TWO are benefits of using Transaction Guard in a Data Guard environment?

- A. It protects against recoverable errors during a planned or an unplanned outage of a primary database.
- B. It provides application continuity by replaying transactions interrupted by a failover or a switchover
- C. It protects against user errors being replicated to standby databases.
- D. It provides application continuity by rolling back uncommitted transactions interrupted by a failover or switchover.
- E. It protects against logical corruptions being replicated to standby databases.

Answer: A,D

Explanation:

Transaction Guard provides benefits in terms of transaction consistency and recovery in a Data Guard environment:

It provides application continuity by rolling back uncommitted transactions interrupted by a failover or switchover (B): Transaction Guard ensures that any uncommitted transactions at the time of an outage are rolled back consistently, thus preserving the integrity of the application's data and state.

It protects against recoverable errors during a planned or an unplanned outage of a primary database (D): Transaction Guard offers protection against errors that can occur during outages, allowing applications to resume operations more quickly and reliably after recovery.

NEW QUESTION # 86

Which THREE are true about using flashback database in a Data Guard environment?

- A. When a flashback database operation is performed on a primary database, a logical standby database is also flashed back automatically.
- B. You can use it when real-time apply is enabled in case the physical standby suffers from logical corruption.
- C. You can use it when real-time apply is enabled in case the primary may not be used to flash back a primary database after a failover to a logical standby.
- D. It may be used to flash back a physical standby that receives redo from a far sync instance.
- E. It may not be used to flash back a primary database after a failover to a physical standby.
- F. When a flashback database operation is performed on a primary database, a physical standby database is also flashed back automatically.

Answer: B,D,E

Explanation:

Flashback Database is a feature that allows reverting a database to a previous point in time, which is extremely useful in various Data Guard configurations:

* It may be used to flash back a physical standby that receives redo from a far sync instance (C):

Flashback Database can be used on a physical standby database to revert it to a past point in time, even when it is receiving redo data from a far sync instance. This can be particularly useful to recover from logical corruptions or unwanted changes.

* You can use it when real-time apply is enabled in case the physical standby suffers from logical corruption (D): Even when real-time apply is enabled, which allows redo data to be applied to the standby database as soon as it is received, Flashback Database can be used to revert the physical standby database to a point in time before the logical corruption occurred.

* It may not be used to flash back a primary database after a failover to a physical standby (E):

After a failover has occurred from a primary to a physical standby database, making the standby the new primary, Flashback Database cannot be used to revert the old primary database to a state before the failover because the failover operation makes irreversible changes to the database role and configuration. NEW QUESTION # 87

.....

As we all know, the latest 1z1-076 quiz prep has been widely spread since we entered into a new computer era. The cruelty of the competition reflects that those who are ambitious to keep a foothold in the job market desire to get the 1z1-076 certification. Our 1z1-076 exam guide engage our working staff in understanding customers' diverse and evolving expectations and incorporate that understanding into our strategies. Our laTest 1z1-076 Quiz prep aim at assisting you to pass the 1z1-076 exam and making you ahead of others.

1z1-076 Pass4sure Dumps Pdf: <https://www.practicematerial.com/1z1-076-exam-materials.html>

Oracle Reliable 1z1-076 Exam Practice However, the time you have saved means the tens of thousands of opportunities seized in your hands, You can not only get the latest & valid exam questions and answers but also have good control & test mood from our Oracle 1z1-076 test simulate so that you will adapt yourself to the real test, Oracle Reliable 1z1-076 Exam Practice Since that we promise that you can enjoy free updates for one year after your purchase.

Choose Map to Ordered Lists from the drop-down menu when your numbered paragraphs 1z1-076 are consecutive, I got a letter from them, However, the time you have saved means the tens of thousands of opportunities seized in your hands.

Pass Guaranteed Quiz Oracle - Reliable Reliable 1z1-076 Exam Practice

You can not only get the latest & valid exam questions and answers but also have good control & test mood from our Oracle 1z1-076 test simulate so that you will adapt yourself to the real test.

Since that we promise that you can enjoy free updates for one year after your purchase, PracticeMaterial wants to win the trust of Oracle 1z1-076 exam candidates at any cost.

We assure you 100 percent success rate, so you will not waste any money.
