

# HPE7-A03 Practice Exam Materials: Aruba Certified Campus Access Architect Exam and HPE7-A03 Study Guide - FreeDumps

BTW, DOWNLOAD part of FreeDumps HPE7-A03 dumps from Cloud Storage: <https://drive.google.com/open?id=1SQIhz2uUMM6RJtvtuFBKFHP2I3WshbbP>

The FreeDumps is one of the top-rated and trusted platforms that are committed to making the HP HPE7-A03 exam preparation simple, easy, and quick. To achieve this objective the FreeDumps is offering valid, updated, and easy-to-use HP HPE7-A03 Exam Practice test questions in three different formats. These three formats are HP HPE7-A03 exam practice test questions PDF dumps, desktop practice test software, and web-based practice test software.

## HP HPE7-A03 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Analyze Requirements: It focuses on determining possible high-level solutions. The topic also discusses mapping the needs into technical solutions and evaluating the proposed solution against project objectives and dependencies. Moreover, it also focuses on documenting assumptions.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>Architect the Solution: It measures your knowledge about identifying the solution options, designing high-level topologies, selecting the correct products, and determining the suitable overlay and underlay design. Additionally, the topic discusses how to verify that the design meets the original requirements.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>Discover Requirements: This topic defines the goals and identifies the current environment and the objectives. Lastly, it also focuses on collecting information.</li></ul>
Topic 4	<ul style="list-style-type: none"><li>Propose the Solution: The focal point of this topic is creating the design documentation and the final design. Moreover, the topic also focuses on presenting the solution.</li></ul>

## Free HPE7-A03 Questions That Will Get You Through the Exam

You may be get refused by so many HPE7-A03 study dumps in the present market, facing so many similar HPE7-A03 study guide, so how can you distinguish the best one among them? We will give you some suggestions, first of all, you need to see the

pass rate, for all the efforts we do to the HPE7-A03 Study Dumps is to pass . Our company guarantees the high pass rate. Second, you need to see the feedback of the customers, since the customers have used it, and they have the evaluation of the HPE7-A03 study guide.

## HP Aruba Certified Campus Access Architect Exam Sample Questions (Q78-Q83):

### NEW QUESTION # 78

You are presenting your network design solution to your customer. What is important to include in your presentation?

- A. your experience with this kind of project
- B. your rollback plan
- C. tangible and intangible returns for the customer
- D. protocols that will be used to make your solution work

**Answer: C**

Explanation:

When presenting a network design solution to a customer, it is crucial to focus on the benefits that the solution will bring to their business. This includes both tangible returns, such as cost savings, increased efficiency, and improved performance, and intangible returns, such as enhanced security, scalability, and user satisfaction. Highlighting how the solution addresses the customer's specific needs and challenges, and how it aligns with their business objectives, helps in demonstrating the value of the solution and facilitates decision-making. Including tangible and intangible returns in the presentation makes it more compelling and relevant to the customer's business goals, thereby increasing the likelihood of the proposal's acceptance.

### NEW QUESTION # 79

A large multinational financial institution has contracted you to design a new full-stack wired and wireless network for their new 6-story regional office building. The bottom two floors of this facility will be retail space for a large banking branch. The upper floors will be carpeted office space for corporate users, each floor being approximately 100,000 sq ft (9290 sqm). Data centers are all off site and will be out of scope for this project. The customer is underserved by its existing L2-based network infrastructure and would like to take advantage of modern best practices in the new design. The network should be fully resilient and fault-tolerant, with dynamic segmentation at the edge.

The retail space will include public guest Wi-Fi access. Retail associates will have corporate tablets for customer service, and there will be a mix of wired and wireless devices throughout the retail floors. The corporate users will primarily use wireless for connectivity, but several wired clients, printers, and hard VoIP phones will be in use.

The customer is also planning on renovating the corporate office space in order to take advantage of 'smart office' technology. These improvements will drive blue-dot wayfinding, presence analytics, and other location-based services. The client decided that wired headless devices would be authenticated using Mac Authentication and would have RADIUS attributes sent back to the NAD to assign VLAN and port access parameters to the authentication session on the switch port.

What would be critical in making this a successful deployment? (Select two.)

- A. ClearPass
- B. Mobility Gateway
- C. DHCP
- D. Airwave

**Answer: A,B**

### NEW QUESTION # 80

Drag and Drop Question

You are going with a 3-tier design and need to calculate the oversubscription ratio on the Access, Distribution, Core, and ToR Layer. What is a suitable oversubscription ratio for each layer?

freedumps.top

**Answer:**

**Explanation:**

freedumps.top

#### NEW QUESTION # 81

What is one use case for designing a 2-tier campus LAM instead of using a 3-tier?

- A. The network has grown beyond a few building aggregation points
- B. Access aggregation points are not scaling to meet traffic demands.
- **C. The campus has small buildings with only a few wiring closets.**
- D. Cross-campus traffic has grown beyond the capacity of a single collapsed core

**Answer: C**

**Explanation:**

A 2-tier campus LAN architecture, consisting of the core and access layers, is typically suitable for smaller campuses or networks with limited numbers of wiring closets. This simplified architecture eliminates the need for a dedicated aggregation layer, which is more common in larger, more complex network environments (the 3-tier architecture). In a small campus setting with only a few wiring closets, a 2-tier design can provide sufficient performance and scalability, reducing complexity and potentially lowering costs. This architecture allows for direct connectivity between the access layer, where end devices connect to the network, and the core layer, which routes traffic to and from the campus network. The use of a 2-tier architecture in such scenarios is driven by the network's size and the simplicity of its requirements, making it an efficient and effective choice.

#### NEW QUESTION # 82

A global cruise line company needs to refresh its current fleet. They will refresh the 'insides' of the ship to be cost-effective and increase their sustainability. They will replace the complete WLAN/LAN hardware of the ship. In this refresh, the company will not refresh its current security requirements. The CIO also wants to limit the number of unused ports in the switches. Future expansion will always mean a refresh of hardware. They start with the smallest ship with a maximum of 800 guests. Each ship has a LAN infrastructure consisting of two core switches, up to 10 redundant distribution switches, and up to 500 access switches (400 cabins, 100 technical rooms). The Core switches are located in the MDF of the ship and the distribution switches are located in the IDFs of the ship. Each cabin and technical room gets one single access switch. The cabling structure of the ship will not be refreshed. Each IDF is connected to the MDF by SMF, of which two pairs are available for the interconnect between the core and distribution. The length of SM fiber between MDF and IDF is less than 300 meters (980 ft) and the type used is OS1. Each cabin is connected by a single OM2 pair to the IDF, the maximum length is 60 meters (200 ft). Each technical room is connected by a single OM2 pair to the IDF, with lengths between 100 and 150 meters (320 and 500 ft). For each cabin/technical room the customer is looking to replace their current fan-less 2530/2540 without changing the

requirements, except they need to upgrade the uplink to distribution switch to 10GbE to handle the increased network traffic, and the technical rooms need redundant power.

The WLAN infrastructure will be 1:1 refreshed without new cabling or new AP locations. Their WLAN infrastructure is based on the 200/300 series indoor and outdoor APs running InstantOS (less than 300 APs), the customer has no change in WLAN requirements.

The cruise line company will replace its current internet connection before the LAN/WLAN refresh. The new Internet connection will provide a 99.8% uptime, which is needed to ensure the paid guest Wi-Fi is always operational. With this new Internet connection, the CIO of the cruise line wants to base the design on the ESP architecture from Aruba because internet connection is guaranteed.

Based on the best practices and customer requirements, what is the correct WLAN approach?

- A. OS10 AP only deployment
- B. Instant OS6 deployment
- C. OS10 AP and gateway deployment
- D. OS8 campus deployment

**Answer: A**

### NEW QUESTION # 83

.....

Considering your practical constraint and academic requirements of the HPE7-A03 exam preparation, you may choose the HPE7-A03 practice materials with following traits. High quality and accuracy with trustworthy reputation; professional experts group specific in this line; considerate after-sales services are having been tested and verified all these years, HPE7-A03 training guide is fully applicable to your needs.
