Latest MB-335 Demo - MB-335 New Question

Exam4Free Microsoft MB-335 exam training materials praised by the majority of candidates is not a recent thing. This shows Exam4Free Microsoft MB-335 exam training materials can indeed help the candidates to pass the exam. Compared to other questions providers, Exam4Free Microsoft MB-335 exam training materials have been far ahead. uestions broad consumer recognition and reputation, it has gained a public praise. If you want to participate in the Microsoft MB-335 Exam, quickly into Exam4Free website, I believe you will get what you want. If you miss you will regret, if you want to become a professional IT expert, then quickly add it to cart.

Microsoft Dynamics 365 Supply Chain Management Functional Consultant Expert Sample Questions (Q50-Q55):

NEW QUESTION # 50

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution. Determine whether the solution meets the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

A manufacturing company has a new speaker that is available with standard and premium carbon fiber options.

For the premium option, speakers are made to order. Customers can choose from seven product attributes at different prices.

You need to create and configure the product and pricing for the new speaker.

Solution: Create a constraint-based product with configurations. Use a price model to calculate the different configurable option costs.

Does the solution meet the goal?

- A. No
- B. Yes

Answer: B

Explanation:

The solution meets the goal. Here is the explanation:

To create and configure the product and pricing for the new speaker, you should use the following steps1:

Create a product master for the speaker and release it to the relevant legal entities. On the Product dimension groups page, select Constraint-based configuration as the configuration technology, and select the configuration dimension. On the Released product details page, select Configurable on the Engineer tab.

Create a constraint-based product configuration model for the speaker and add it as a version to the product master. On the Constraint-based product configuration model details page, add attributes, constraints, subcomponents, BOM lines, and route operations to define the features and structure of the speaker. For example, you can add an attribute for carbon fiber options and specify Standard and Premium as the values. You can also add constraints to limit the combinations of attribute values that are allowed.

Create a price model for the speaker and link it to the product configuration model. On the Price models page, add price components and specify how they are calculated based on attributes, subcomponents, BOM lines, or route operations. For example, you can add a price component for carbon fiber options and specify different prices for Standard and Premium values. You can also add price components for other attributes that affect the price of the speaker.

Configure products on sales orders, sales quotations, purchase orders, or production orders by using the Product configuration models page. You can select values for attributes and see how they affect the price of the speaker. You can also view the price details and see how each price component contributes to the total price.

1: Product configuration overview : Create constraint-based configuration : Price models

NEW QUESTION # 51

A company plans to account for indirect costs related to materials used to manufacture products.

The items used to manufacture products have surcharge rates that depend on the type of product being used.

You need to set up the costing sheet to include surcharges for specific items.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

Explanation:

- 1 - Create cost groups for indirect and direct costs
- 2 - Create a node-type surcharge under the indirect cost group
- 3 - Assign a cost group to the items

NEW QUESTION # 52

A company uses Dynamics 365 Supply Chain Management.

The marketing group needs to be able to view a manufacturer's suggested retail price (MSRP) for a new bill of materials (BOM) item when the cost of the BOM item is calculated.

You need to configure the functionality.

What should you do?

- A. Add a profit setting percentage to the released BOM product.
- B. Add a profit setting percentage to a calculation group.
- C. Add a profit setting percentage to a cost group.
- D. Set the sales price model field on the calculation group to item sales price.
- E. Use the category price rules to generate a trade agreement with the sales price.

Answer: E

Explanation:

* To view the manufacturer's suggested retail price (MSRP) for a new bill of materials (BOM) item, you need to configure a calculation group with a profit setting percentage. A calculation group is a group of

* settings that determine how the cost and sales price of a BOM item are calculated1. A profit setting percentage is a percentage that is added to the cost of a BOM item to calculate the sales price2. You can specify a profit setting percentage for each calculation group on the Calculation groups page3.

* When you calculate the cost and sales price of a BOM item, you must select a calculation group on the Calculations page. The

calculation group determines the cost model and sales price model that are used for the BOM calculation. The cost model defines how the cost of the BOM item is calculated based on the cost categories and cost groups of the components and operations. The sales price model defines how the sales price of the BOM item is calculated based on the profit setting percentage and the cost model.

* By using a calculation group with a profit setting percentage, you can view the MSRP for a new BOM item when you calculate its cost and sales price. The MSRP will be shown as the calculated sales price on the Calculate item cost page. You can also view the calculation details and see how the profit setting percentage is applied to the cost of the BOM item.

* The other options are not correct, because they do not allow you to view the MSRP for a new BOM item when you calculate its cost. Setting the sales price model field on the calculation group to item sales price would use the existing sales price of the BOM item from the Item price page, instead of calculating a new sales price based on a profit setting percentage. Using the category price rules to generate a trade agreement with the sales price would create a trade agreement line for the BOM item based on its category, but it would not show the MSRP when you calculate its cost. Adding a profit setting percentage to the released BOM product or to a cost group would have no effect, because these entities do not affect how the sales price of a BOM item is calculated.

1: Calculation groups 2: Profit settings 3: Create or modify calculation groups : [BOM calculations] : [Cost models and sales price models] : [Calculate costs and prices for manufactured items] : [Category pricing rules]

NEW QUESTION # 53

You need to configure the system to meet the requirements.

What should you use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

NEW QUESTION # 54

You are a manufacturing consultant helping a client test out different bill of material (BOM) and route consumption options when starting production orders. Material and labor consumption are to be completed before Report as finish.

You are running a production order with BOM lines that have a Flushing principle set to Start. The Automatic Route Consumption Runtime has been set to Yes.

You have set up the default Start user options for all production orders as shown in the exhibit below.

Answer:

Explanation:
