## Mule-Dev-301 Study Test & New Mule-Dev-301 Dumps Sheet

There is no denying that no exam is easy because it means a lot of consumption of time and effort. Especially for the upcoming Mule-Dev-301 exam, although a large number of people to take the exam every year, only a part of them can pass. If you are also worried about the exam at this moment, please take a look at our Mule-Dev-301 Study Materials, whose content is carefully designed for the Mule-Dev-301 exam, rich question bank and answer to enable you to master all the test knowledge in a short period of time.

## Salesforce Certified MuleSoft Developer II Sample Questions (Q30-Q35):

### NEW QUESTION # 30

Refer to the exhibit.

```

<flow name="implementation" >
  <raise-error doc:name="Raise error" type="APP:CUSTOM_ERROR"/>
</flow>

<munit:test name="start-up-test" description="Test that Mule app starts up" expectedErrorType="APP:CUSTOM_ERROR">
  <munit:execution>
    <flow-ref doc:name="implementation" name="implementation"/>
  </munit:execution>
  <munit:validation >
    <munit-tools:assert-that doc:name="Assert that" expression="#[true]" is="#[MunitTools::equalTo(false)]"/>
  </munit:validation>
</munit:test>

```

The flow name is "implementation" with code for the MUnit test case.  
When the MUnit test case is executed, what is the expected result?

- A. The test throws an error and does not start
- B. The test case fails with an unexpected error type
- **C. The test case fails with an assertion error**
- D. The test case passes

**Answer: C**

Explanation:

Based on the code snippet and MUnit test case below, when the MUnit test case is executed, the expected result is that the test case fails with an assertion error. This is because the assert-equals processor compares two values for equality, and fails if they are not equal. In this case, the expected value is 'Hello World', but the actual value returned by the implementation flow is 'Hello Mule'. Therefore, the assertion fails and an error is thrown. Reference: <https://docs.mulesoft.com/munit/2.3/assert-equals-processor>

### NEW QUESTION # 31

A Flight Management System publishes gate change notification events whenever a flight's arrival gate changes. Other systems, including Baggage Handler System, Inflight Catering System and Passenger Notifications System, must each asynchronously receive the same gate change notification to process the event according.

Which configuration is required in Anypoint MQ to achieve this publish/subscribe model?

- A. Publish the gate change notification to an Anypoint MQ queue.  
Create different anypoint MQ exchange meant for each of the other subscribing systems Bind the queue with each of the exchanges
- B. Publish the gate change notification to an Anypoint MC queue  
Have each client subscribe directly to the queue
- C. Publish each client subscribe directly to the exchange.  
Have each client subscribe directly to the queue.
- **D. Publish the gate change notification to an Anypoint MQ exchange.  
Create different Anypoint MQ queues meant for each of the other subscribing systems. Bind the exchange with each of the queues.**

**Answer: D**

Explanation:

To achieve a publish/subscribe model using Anypoint MQ, where each system receives the same gate change notification event, the developer should publish the gate change notification to an Anypoint MQ exchange, create different Anypoint MQ queues meant for each of the other subscribing systems, and bind the exchange with each of the queues. An exchange is a message routing agent that can send messages to different queues based on predefined criteria. By binding an exchange with multiple queues, each queue receives a copy of every message sent to that exchange. Therefore, each system can subscribe to its own queue and receive every gate change notification event. Reference: <https://docs.mulesoft.com/anypoint-mq/3.x/anypoint-mq-exchanges>

### NEW QUESTION # 32

Which command is used to convert a JKS keystore to PKCS12?

- A. Keytool-importkeystore -srckeystore keystore.p12-srcstoretype PKCS12 -destkeystore keystore.jks -deststoretype JKS
- B. Keytool-importkeystore -srckeystore keystore.jks-srcstoretype PKCS12 -destkeystore keystore.p12 -deststoretype

JKS

- C. `Keytool-importkeystore -srckeystore keystore.jks -srcstoretype JKS -destkeystore keystore.p13 -deststoretype PKCS12`
- **D. `Keytool-importkeystore -srckeystore keystore.p12 -srcstoretype JKS -destkeystore keystore.p12 -deststoretype PKCS12`**

**Answer: D**

Explanation:

To convert a JKS keystore to PKCS12, the developer needs to use the `keytool-importkeystore` command with the following options: `-srckeystore keystore.jks -srcstoretype JKS -destkeystore keystore.p12 -deststoretype PKCS12`. This command imports all entries from a source JKS keystore (`keystore.jks`) into a destination PKCS12 keystore (`keystore.p12`). Reference: <https://docs.oracle.com/en/java/javase/11/tools/keytool.html#GUID-5990A2E4-78E3-47B7-AE75-6D1826259549>

### NEW QUESTION # 33

A Mule application uses API autodiscovery to access and enforce policies for a RESTful implementation.

- A. Nothing because `flowRef` is an optional attribute which can be passed runtime
- B. Any of the APIKit generate implement flows
- C. The name of the flow that has APIKit Console to receive all incoming RESTful operation requests.
- **D. The name of the flow that has HTTP listener to receive all incoming RESTful operation requests**

**Answer: D**

Explanation:

To use API autodiscovery to access and enforce policies for a RESTful implementation, `flowRef` must be set to the name of the flow that has HTTP listener to receive all incoming RESTful operation requests. This way, API autodiscovery can identify the API implementation and associate it with the corresponding API specification and policies in API Manager. The flow that has HTTP listener is usually the main flow that contains the APIKit Router. Reference: <https://docs.mulesoft.com/api-manager/2.x/api-auto-discovery-new-concept#flowref>

### NEW QUESTION # 34

A healthcare portal needs to validate the token that it sends to a Mule API. The developer plans to implement a custom policy using the HTTP Policy Transform Extension to match the token received in the header from the healthcare portal. Which files does the developer need to create in order to package the custom policy?

- A. JSON properties file, XML template file
- **B. XML template file, YAML configuration file**
- C. JSON properties file, YAML configuration file
- D. Deployable ZIP file, YAML configuration file

**Answer: B**

Explanation:

To package a custom policy using the HTTP Policy Transform Extension, the developer needs to create an XML template file and a YAML configuration file. The XML template file defines the policy logic using Mule components and placeholders for user-defined properties. The YAML configuration file defines the metadata of the policy, such as its name, description, category, parameters, and dependencies. Reference: <https://docs.mulesoft.com/api-manager/2.x/http-policy-transform#packaging-the-policy>

### NEW QUESTION # 35

.....

The Salesforce Certified MuleSoft Developer II (Mule-Dev-301) dumps PDF file can be used from any location and at any time. Furthermore, you can take print of Salesforce Questions PDF to do an off-screen study. The web-based Mule-Dev-301 practice exam can be taken via the internet from any browser like Firefox, Safari, Opera, MS Edge, Internet Explorer, and Chrome. You don't need to install any excessive plugins and software to take this Salesforce Certified MuleSoft Developer II (Mule-Dev-301) practice test.
