## ISA/IEC 62443 Cybersecurity Fundamentals Specialist Sample Questions (Q185-Q190):

### NEW QUESTION # 185

Which of the ISA 62443 standards focuses on the process of developing secure products?

Available Choices (select all choices that are correct)

- A. 62443-4-1
- B. 62443-1-1
- C. 62443-3-2
- D. 62443-3-3

Answer: A

Explanation:

The ISA/IEC 62443 series of standards is divided into four main parts, each covering a different aspect of industrial automation and control systems (IACS) cybersecurity<sup>1</sup>:

\* Part 1: Terminology, Concepts, and Models

\* Part 2: Policies and Procedures

\* Part 3: System Requirements

\* Part 4: Component Requirements The part 4 of the series focuses on the requirements for the secure development and maintenance of products that are used in IACS, such as controllers, sensors, actuators, network devices, software applications, and cloud services. The part 4 consists of two standards<sup>1</sup>:

#### NEW QUESTION # 186

Which of the following can be employed as a barrier device in a segmented network?

Available Choices (select all choices that are correct)

- A. VPN
- B. Unmanaged switch
- C. Router
- D. Domain controller

**Answer: C**

#### NEW QUESTION # 187

What does the abbreviation CSMS stand for in ISA 62443-2-1?

Available Choices (select all choices that are correct)

- A. Control System Management System
- B. Control System Monitoring System
- C. Cyber Security Management System
- D. Cyber Security Monitoring System

**Answer: C**

Explanation:

The abbreviation CSMS stands for Cyber Security Management System in ISA 62443-2-1. This standard defines the elements necessary to establish a CSMS for industrial automation and control systems (IACS) and provides guidance on how to develop those elements<sup>123</sup>. A CSMS is a collection of policies, procedures, practices, and personnel that are responsible for ensuring the security of IACS throughout their lifecycle<sup>24</sup>. #### NEW QUESTION # 188

What is the purpose of ICS-CERT Alerts?

- A. To inform about hardware upgrades
- B. To advertise cybersecurity services
- C. To alert of targeted global energy sector threats
- D. To notify the owners of critical infrastructure

**Answer: D**

Explanation:

ICS-CERT (Industrial Control Systems Cyber Emergency Response Team) issues alerts to inform critical infrastructure owners and operators about newly discovered vulnerabilities, threats, and mitigation strategies.

"ICS-CERT Alerts provide timely information to critical infrastructure owners and operators concerning current security issues, vulnerabilities, and exploits."

- ICS-CERT Advisory Documentation (now under CISA)

Alerts may be sector-wide or vendor-specific, and are part of the U.S. Department of Homeland Security's proactive cyber defense

strategy.

Clarification of Options:

Not specific to the energy sector only (D is too narrow)

Not promotional in nature (eliminates A and B)

### NEW QUESTION # 189

A plant has several zones including business, safety-critical, and wireless zones. According to ISA/IEC 62443, how should these zones be managed during risk assessment?

- A. Treat temporarily connected devices as part of the safety zone permanently.
- B. Ignore physical location when grouping assets.
- C. Combine all zones into one for simplicity.
- **D. Establish clear separation between zones based on criticality.**

**Answer: D**

Explanation:

The zone and conduit model, core to IEC 62443-3-2, emphasizes the importance of separating zones based on their risk profile and criticality.

From IEC 62443-3-2, Clause 4.5.2:

"Zones should be established to group assets with similar security requirements. The separation of zones ensures that assets with differing risk levels are appropriately isolated to reduce the attack surface and limit propagation of potential threats." Furthermore, Clause 4.5.5 states:

"The use of conduits between zones should be carefully evaluated and controlled, with security functions tailored to the sensitivity of the zones involved." Incorrect Options:

A). Combine all zones - Violates the principle of segmentation and defense-in-depth.

B). Ignore physical location - Physical and logical segmentation is key in risk assessment.

D). Treat temporary devices as permanent - Inconsistent with the dynamic risk-based approach outlined in 62443-3-2.
