

Fantastic Latest CDPSE Test Prep, Ensure to pass the CDPSE Exam

P.S. Free 2026 ISACA CDPSE dumps are available on Google Drive shared by Exam4PDF: <https://drive.google.com/open?id=1NAvRH4PguKpb0ZMnxysGzDK7NofxGqcp>

This product is enough to get ready for the CDPSE test on the first attempt. Three formats are easy to use and meet the needs of every Certified Data Privacy Solutions Engineer (CDPSE) test applicant. The ISACA CDPSE practice material's three formats are Desktop practice test software, web-based practice exam, and PDF.

ISACA CDPSE certification is designed for professionals who specialize in data privacy solutions engineering. Certified Data Privacy Solutions Engineer certification is specifically developed for professionals who have a thorough understanding of the data privacy laws and regulations and can use their knowledge and skills to design, implement, and manage privacy solutions in their organizations. The CDPSE certification provides a comprehensive framework for individuals to demonstrate their expertise in data privacy solutions engineering.

What are the objectives of taking the Isaca CDPSE Certification Exam?

The main objectives of taking the Isaca CDPSE Certification Exam discussed in the **CDPSE Dumps** are:

- To mitigate the risk of cyberattacks. I recommend you update your understanding to be a safeguard for your business. The friends of a friend are a danger. The candidate who has passed the Isaca CDPSE Certification Exam will be able to reduce the risk of cyberattacks and data breaches.
- To assess the privacy of data stored on servers. Real and accurate information is required to pass the exam. Introduced the basics of the internet and the impact of information technology on society.
- To build and implement a privacy solution. The materials that provide you with this CDPSE exam are updated regularly.

New CDPSE Dumps Pdf - CDPSE Valid Test Test

To be convenient for the learners, our CDPSE certification questions provide the test practice software to help the learners check their learning results at any time. You can use your smart phones, laptops, the tablet computers or other equipment to download and learn our CDPSE learning materials. Moreover, our customer service team will reply the clients' questions on the CDPSE Exam Questions patiently and in detail at any time and the clients can contact the online customer service. The clients at home and abroad can purchase our CDPSE certification questions online.

The CDPSE Certification Exam consists of four domains that cover the complete spectrum of data privacy engineering. These domains include privacy governance, privacy architecture, privacy operations, and privacy engineering. Each domain covers specific

topics related to data privacy, such as data protection, privacy risk assessment, privacy policies, and privacy compliance. Certified Data Privacy Solutions Engineer certification exam assesses the candidate's knowledge and skills in all these domains.

ISACA Certified Data Privacy Solutions Engineer Sample Questions (Q152-Q157):

NEW QUESTION # 152

Which of the following technologies BEST facilitates protection of personal data?

- A. Data profiling tools
- **B. Data loss prevention (DLP) tools**
- C. Data discovery and mapping tools
- D. Data log file monitoring tools

Answer: B

Explanation:

Explanation

Data loss prevention (DLP) tools are technologies that help to prevent unauthorized access, use, or transfer of personal data. DLP tools can monitor, detect, and block data leakage or exfiltration from various sources, such as endpoints, networks, cloud services, or email. DLP tools can also enforce data protection policies and compliance requirements, such as encryption, masking, or deletion of sensitive data. DLP tools can help to protect personal data from both internal and external threats, such as malicious insiders, hackers, or accidental exposure.

References:

Data protection solutions rely on technologies such as data loss prevention (DLP), storage with built-in data protection, firewalls, encryption, and endpoint protection, Cloudian Top 10 Hot Data Security And Privacy Technologies, Forbes

NEW QUESTION # 153

A health organization experienced a breach of a database containing pseudonymized personal data. Which of the following should be of MOST concern to the IT privacy practitioner?

- **A. The data may be re-identified.**
- B. The data was proprietary.
- C. The data was classified as confidential.
- D. The data is subject to regulatory fines.

Answer: A

Explanation:

Explanation

Pseudonymization is a technique that replaces or removes direct identifiers from personal data, such as names, addresses, or social security numbers, with pseudonyms, such as codes, tokens, or random values. However, pseudonymization does not eliminate the possibility of re-identification, as the original data can still be linked back to the pseudonyms using additional information or techniques. Therefore, if a database containing pseudonymized personal data is breached, the IT privacy practitioner should be most concerned about the risk of re-identification, which could compromise the privacy and security of the data subjects. The other options are less relevant or important than the risk of re-identification.

NEW QUESTION # 154

Which of the following is a PRIMARY objective of performing a privacy impact assessment (PIA) prior to onboarding a new Software as a Service (SaaS) provider for a customer relationship management (CRM) system?

- A. To classify personal data according to the data classification scheme
- **B. To identify controls to mitigate data privacy risks**
- C. To assess the risk associated with personal data usage
- D. To determine the service provider's ability to maintain data protection controls

Answer: B

Explanation:

A primary objective of performing a privacy impact assessment (PIA) prior to onboarding a new Software as a Service (SaaS) provider for a customer relationship management (CRM) system is to identify controls to mitigate data privacy risks, such as data breaches, unauthorized access, misuse or loss of data. A PIA would help to evaluate the potential privacy impacts of using a new SaaS provider for CRM data processing activities, such as collecting, storing, analyzing or transferring customer data, and to implement appropriate controls to mitigate those impacts, such as encryption, access control, backup, audit trail or contractual clauses. A PIA would also help to ensure compliance with privacy principles, laws and regulations, and alignment with customer expectations and preferences. The other options are not primary objectives of performing a PIA prior to onboarding a new SaaS provider for CRM data processing activities. Classifying personal data according to the data classification scheme is an activity that may be part of a PIA process, but it is not an objective in itself. Assessing the risk associated with personal data usage is an activity that may be part of a PIA process, but it is not an objective in itself. Determining the service provider's ability to maintain data protection controls is an activity that may be part of a PIA process, but it is not an objective in itself, p. 67 Reference: 1: CDPSE Review Manual (Digital Version)

NEW QUESTION # 155

An organization plans to implement a new cloud-based human resources (HR) solution with a mobile application interface. Which of the following is the BEST control to prevent data leakage?

- A. Download of data to the mobile devices is disabled.
- B. Data stored in the cloud-based solution is encrypted.
- C. Single sign-on is enabled for the mobile application.
- D. Separate credentials are used for the mobile application.

Answer: A

Explanation:

The best control to prevent data leakage for a cloud-based HR solution with a mobile application interface is to disable the download of data to the mobile devices. This is because downloading data to the mobile devices increases the risk of data loss, theft, or unauthorized access, especially if the devices are lost, stolen, or compromised. Disabling the download of data to the mobile devices ensures that the data remains in the cloud-based solution, where it can be protected by encryption, access control, and other security measures. The other options are not as effective or sufficient as disabling the download of data to the mobile devices, as they do not address the root cause of the data leakage risk, which is the exposure of data outside the cloud-based solution.

NEW QUESTION # 156

Which of the following solutions would BEST enable a privacy practitioner to support control over data processing activities related to personal information?

- A. Consent management platform
- B. SIEM
- C. Enterprise resource planning (ERP)
- D. Data loss prevention (DLP)

Answer: A

Explanation:

A consent management platform (CMP) directly supports control over personal data processing by tracking and enforcing individuals' consent preferences across systems. SIEM (A) monitors security events, ERP (C) supports operations, and DLP (D) protects against data leakage but does not manage lawful basis for processing.

"Consent management tools ensure personal data is processed only in line with valid consent or lawful basis."
