Um Ihre Zertifizierungsprüfungen reibungslos erfolgreich zu meistern, brauchen Sie nur unsere Prüfungsfragen und Antworten zu Appian ACD201 (Appian Senior Developer) auswendigzulernen. Viel Erfolg!

Appian ACD201 Prüfungsplan:

Thema	Einzelheiten
Thema 1	<ul style="list-style-type: none">• Performance and Scalability: This section of the exam measures the skills of Appian Developers and covers designing performant components, building memory-efficient models, conducting database load and automated testing, analyzing server memory and logs for risks, and resolving performance concerns for end users.
Thema 2	<ul style="list-style-type: none">• Data Management: This section of the exam measures the skills of Solution Architects and covers designing and documenting data models, recommending record types for optimization and security, working with relational data, and implementing complex models with supporting objects.
Thema 3	<ul style="list-style-type: none">• Advanced Appian Concepts: This section of the exam measures the skills of Solution Architects and covers creating and configuring authentication methods, setting up integration objects, designing APIs, evaluating smart services and plug-ins, and applying SSO mechanisms with SAML and LDAP.
Thema 4	<ul style="list-style-type: none">• Application Design and Development: This section of the exam measures the skills of Appian Developers and covers translating business requirements into user stories, building end-to-end applications, managing object security, applying design best practices, and ensuring user-centric experiences through proper UX design.

ACD201 Prüfungsinformationen, ACD201 Antworten

Dass man das Zertifikat für Appian ACD201 erhalten kann, wird die Voraussetzung dafür, dass man in der immer schärf konkurrierten IT-Branche weiter entwickeln kann. Es ist durchaus machbar, dass man anhand der Fragenkataloge zur Appian ACD201 Zertifizierungsprüfung von ITZert diese Prüfung so schnell wie möglich besteht. Wir versprechen Ihnen, dass wir Ihnen alle Ihre bezahlten Summe zurückgeben werden, wenn Sie die Appian ACD201 Zertifizierungsprüfung nicht bestehen, nachdem Sie unsere Fragenpool gekauft haben.

Appian Senior Developer ACD201 Prüfungsfragen mit Lösungen (Q30-Q35):

30. Frage

An insurance application has a dashboard in which all the cases with "Accident" case type and "Health Insurance" insurance type are displayed to the user, using the following query:

```
alquery{
  logicalExpression: alqueryLogicalExpression(
    operator: "AND",
    filters: {
      alqueryFilter(
        field: "caseType",
        operator: "=",
        value: "Accident"
      ),
      alqueryFilter(
        field: "insuranceType",
        operator: "=",
        value: "Health Insurance"
      )
    }
  ),
  pagingInfo: alpagingInfo(
    startIndex: 1,
    batchSize: 10,
    sort: alsortInfo(
      field: "createdDate"
    )
  )
}
```

You need to update the query entity to display all the cases that are "Accident" case type and "Health Insurance" insurance type, or created in the last ten days.

What is the right configuration for the logical expression?

```
alqueryLogicalExpression(
  operator: "OR",
  filters: {
    alqueryFilter(
      field: "caseType",
      operator: "=",
      value: "Accident"
    ),
    alqueryFilter(
      field: "insuranceType",
      operator: "=",
      value: "Health Insurance"
    )
  },
  logicalExpressions: alqueryLogicalExpression(
    operator: "OR",
    filters: alqueryFilter(
      field: "createdDate",
      value: today() - 10,
      operator: ">="
    )
  )
}
```

- A.

```

alqueryLogicalExpression(
  operator: "AND",
  filters: {
    alqueryFilter(
      field: "caseType",
      operator: "=",
      value: "Accident"
    ),
    alqueryFilter(
      field: "insuranceType",
      operator: "=",
      value: "Health Insurance"
    ),
    alqueryFilter(
      field: "createdDate",
      value: today() - 10,
      operator: ">="
    )
  }
)

```

• B.

```

alqueryLogicalExpression(
  operator: "OR",
  filters: alqueryFilter(
    field: "createdDate",
    value: today() - 10,
    operator: ">="
  ),
  logicalExpressions: alqueryLogicalExpression(
    operator: "AND",
    filters: {
      alqueryFilter(
        field: "caseType",
        operator: "=",
        value: "Accident"
      ),
      alqueryFilter(
        field: "insuranceType",
        operator: "=",
        value: "Health Insurance"
      )
    }
  )
)

```

• C.

Antwort: C

Begründung:

A filter for createdDate >= today() - 10 (records created in the last 10 days).

A nested AND logical expression that requires both caseType = "Accident" and insuranceType = "Health Insurance".

31. Frage

You need to test a related action that updates record data.

Appropriate users must be able to access the form. You also need to ensure that the data is successfully updated.

Using Appian, which is the best testing method you should use?

- A. Unit Testing
- B. Performance Testing
- C. User Accepting Testing

Antwort: C

Begründung:

User Acceptance Testing (UAT) is the best method, as it ensures appropriate users can access the form and verifies that the data update process works as intended in a real-world scenario.

32. Frage

Match each authentication type to the correct authentication characteristic description.

Note: Each description will be used once. To change your responses, you may deselect your response by clicking the blank space at the top of the selection list.

LDAP Authentication <i>Select a match:</i>	<input type="checkbox"/> Requires a username and password. <input type="checkbox"/> Allows for secure exchange of authentication information over multiple domains and environments. <input type="checkbox"/> Allows you to configure Appian to authenticate users against an external directory server, such as Microsoft Active Directory. <input checked="" type="checkbox"/> Redirects users to an external identity provider to establish single sign-on (SSO).
Basic <i>Select a match:</i>	<input type="checkbox"/> Requires a username and password. <input type="checkbox"/> Allows for secure exchange of authentication information over multiple domains and environments. <input type="checkbox"/> Allows you to configure Appian to authenticate users against an external directory server, such as Microsoft Active Directory. <input checked="" type="checkbox"/> Redirects users to an external identity provider to establish single sign-on (SSO).
OpenID Connect (OIDC) <i>Select a match:</i>	<input type="checkbox"/> Requires a username and password. <input type="checkbox"/> Allows for secure exchange of authentication information over multiple domains and environments. <input type="checkbox"/> Allows you to configure Appian to authenticate users against an external directory server, such as Microsoft Active Directory. <input checked="" type="checkbox"/> Redirects users to an external identity provider to establish single sign-on (SSO).
SAML Authentication <i>Select a match:</i>	<input type="checkbox"/> Requires a username and password. <input type="checkbox"/> Allows for secure exchange of authentication information over multiple domains and environments. <input type="checkbox"/> Allows you to configure Appian to authenticate users against an external directory server, such as Microsoft Active Directory. <input checked="" type="checkbox"/> Redirects users to an external identity provider to establish single sign-on (SSO).

Antwort:

Begründung:

LDAP Authentication
Select a match:

Requires a username and password.
Allows for secure exchange of authentication information over multiple domains and environments.
Allows you to configure Appian to authenticate users against an external directory server, such as Microsoft Active Directory.
Redirects users to an external identity provider to establish single sign-on (SSO).

Basic
Select a match:

Requires a username and password.
Allows for secure exchange of authentication information over multiple domains and environments.
Allows you to configure Appian to authenticate users against an external directory server, such as Microsoft Active Directory.
Redirects users to an external identity provider to establish single sign-on (SSO).

OpenID Connect (OIDC)
Select a match:

Requires a username and password.
Allows for secure exchange of authentication information over multiple domains and environments.
Allows you to configure Appian to authenticate users against an external directory server, such as Microsoft Active Directory.
Redirects users to an external identity provider to establish single sign-on (SSO).

SAML Authentication
Select a match:

Requires a username and password.
Allows for secure exchange of authentication information over multiple domains and environments.
Allows you to configure Appian to authenticate users against an external directory server, such as Microsoft Active Directory.
Redirects users to an external identity provider to establish single sign-on (SSO).

33. Frage

You're inspecting the items in a deployment package for issues you might have missed during package preparation. Which two objects can be in your list of missing precedents for an application? (Choose two.)

- A. Document
- B. Group Type Custom
- C. Connected System
- D. System Knowledge Center

Antwort: B,C

Begründung:

Connected System and Group Type Custom can both be missing precedents in an Appian deployment package, meaning dependent objects required by the application may not have been included.

34. Frage

You're creating an application which has integrations with multiple systems using different protocols.

Match each process model component or node to the appropriate protocol.

Note: Each protocol will be used once. To change your responses, you may deselect your response by clicking the blank space at the top of the selection list.

Call Web Service smart service

Select a match:

REST	<input type="checkbox"/>
SOAP	<input type="checkbox"/>
SMTP	<input type="checkbox"/>

Start event and a receive message trigger

Select a match:

REST
SOAP
SMTP

Call Integration smart service

Select a match:

REST
SOAP
SMTP

Antwort:

Begründung:

35. Frage
